

The Army T&E Perspective

Presented by

MG Robert
Armbruster, USA
Commander,
US Army Test and
Evaluation Command

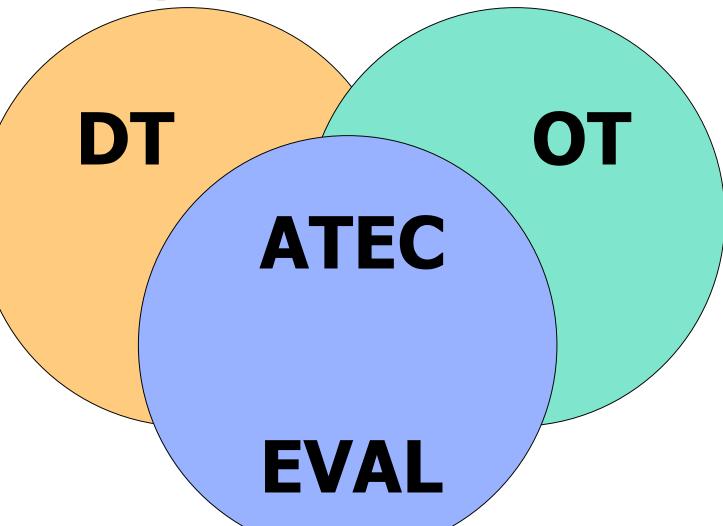

Our Army . . . Our Soldiers . . . Our Equipment

Integrated T&E Structure

The Old Way

- Sequential Development, Production, P31
- Platform-centric

--ORD --S/W

--Centralized PM --Instrumentation

--T&E --System Evals

--Platform Prime Contractor

- Limited Interfaces
- Survivability Measured by Armor
- Evaluations Using Platform
 - -- Effectiveness -- Suitability -- Survivability
- Unique Range Linkages
- Unique School/User Linkages
- Limited M&S and C3 S/W with Executions

The Current Way

Family of Systems (FoS)-Centric

--Common ORD --Common Applique S/W Requirements

--FoS PM

--Common Instrumentation

--T&E Based Upon --FoS Platform Evals Commonality

--FoS Contractor with Extensive Subs

Limited Interfaces

Survivability Measured by Armor

Evaluations Using FoS and Platform

-- Effectiveness -- Suitability -- Survivability

Multiple Range Linkages

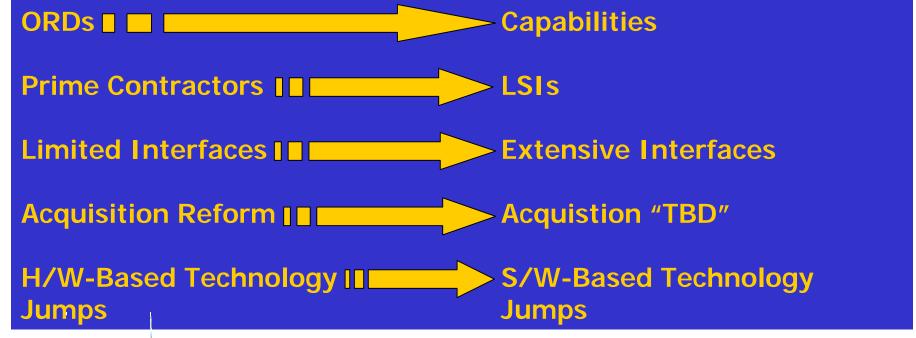

Multiple School/User Linkages

Limited M&S and C3 S/W

What is Changing

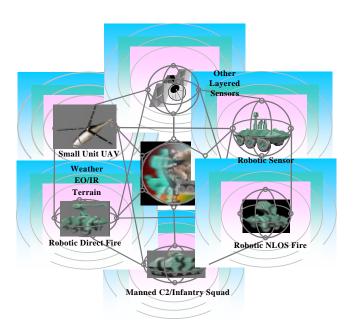

The New Way

- Network and SoS-Centric
 - --Capabilities
 - -- Decentralized PM
 - --T&E New Approaches

- --ExecutiveNetworked S/W
- --Embedded Instrumentation
- --Platform SoS and Evals

- --LSI
- Extensive Interfaces
- Survivability Measured by New Approaches
- Evaluations Using SoS Platform and Degraded States Methodologies
 - -- Effectiveness -- Suitability -- Survivability
- Multiple Virtual and Real Range Linkages
- Multiple School/User Linkages
- Maximum M&S, SILS and C3 S/W

New T&E Approaches

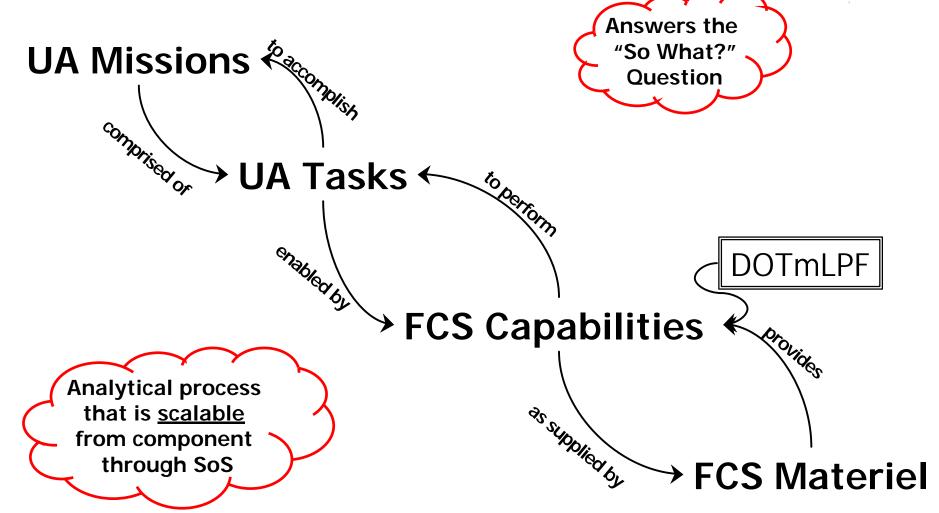

- Up-Front Involvement with LSI/PM prior to the RFP
 - -- Eval Logic-- Schedules -- Data Requirements -- Methodology
- Simulation OTs Live OTs
- Extensive SoS SILS
- Virtual Ranges and C3 Drivers
- Software Blocking
- Committed Unit
- Integrated Survivability

Capabilities-Based Evaluation

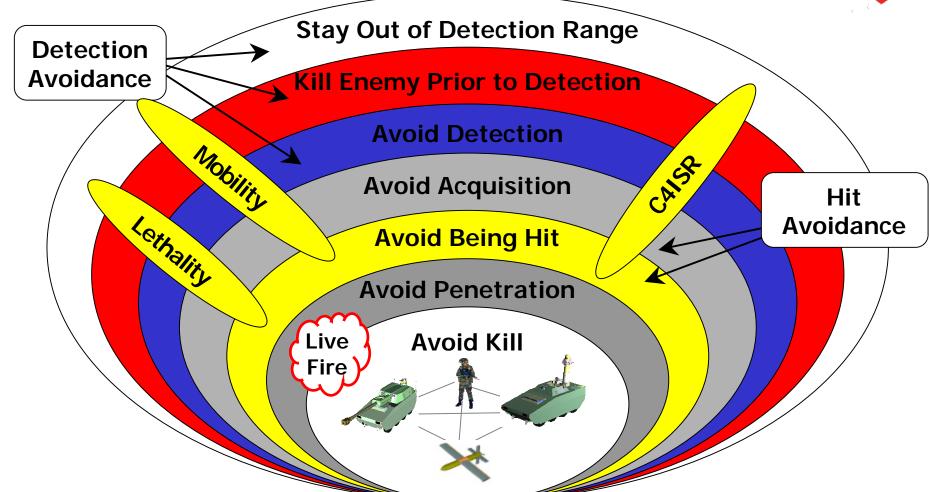

Integrated Survivability

We Are Making Progress

THE NEXT STEP IS FCS
