The Source of This Investigation

SP 1.1 Determine Risk Sources and Categories

- Identification of risk sources provides a basis for systematically examining changing situations over time to uncover circumstances that impact the ability of the project to meet its objectives. Risk sources are both internal and external to the project. As the project progresses, additional sources of risk may be identified.
- Establishing categories for risks provides a mechanism for collecting and organizing risks as well as ensuring appropriate scrutiny and management attention for those risks that can have more serious consequences on meeting project objectives.

CMMISM for Systems Engineering/Software Engineering, Version 1.1, Staged Representation (CMMI-SE/SW, V1.1, Staged) *Technical Report* CMU/SEI-2002-TR-002

NORTHROP GRUMMAN

A Source by Any Other Name

Lots of ways to slice and dice it

- Risk Factors, Drivers, Type, Attributes
 - Cost (C)
 - Schedule (S)
 - Technical [performance] (T)
 - Process Capability
 - Deployability
 - Support

SPM 924 4.4 Analyze Risks

020 Determine risk sources and categories. {CMMI L3 RM SP 1.1} {PRM-924-110}

Note: Risk **categories** reflect the **bins**/groups for collecting and organizing risks, such as lifecycle phase, product type, responsible organization, internal vs external risks, etc.

- Risk Sources = Risk (common) Areas (fundamental drivers), Elements
 - Requirements
 - Vendors, etc.

Taxonomy: A classification system for assigning elements to specially named categories based on shared characteristics

NORTHROP GRUMMAN

Characteristics of Risk Sources

- Contains one or more fundamental drivers that cause risks events to arise within a project or organization
- Provides risk criteria specific to a project
 - Programmatic risks
 - Technology risks
- Guides those doing the risk candidate identification to areas most likely to produce risk events
 - Allows subject matter experts to concentrate on their areas of expertise
- Adds direction to the risk candidate identification activities by maximizing coverage

NORTHROP GRUMMAN

Characteristics of Risk Categories

- Designates risks identified by common attributers
 - Product type
 - Lifecycle phase
 - Responsible organization
 - Often useful to associate risks with the IPT they are assigned to
 - Internal versus external source
- Provides groupings that are more easily managed
 - Tools like Risk Status Charts commonly have a set of characteristics they capture for each risk
 - Highlights interactions between associated risks
 - Helps in the consolidation of activities in the risk handling plans.

NORTHROP GRUMMAN

6

Scope of This Presentation Within the Organization

 Organization – An administrative structure in which people collectively manage one or more projects as a whole, and whose projects share a senior manager and operate under the same policies.

NORTHROP GRUMMAN

Why Not Higher?

Holmes 2002 Organizational Risk Categories

- Credit
- Country and transfer
- Interest rate
- Strategic and business
- Program and project
- Liquidity
- Foreign exchange
- Reputation
- Financial (fraud)
- Legal
- Regulatory

Revised Boehm Top Ten Sources of Risk 1991

DEFINING THE FUTURE

- Personnel Shortfalls
- Unrealistic schedules and budgets
- Developing the wrong software functions

NORTHROP GRUMMAN

- Developing wrong user interface
- Goldplating
- Continuing stream of requirements changes
- Shortfalls in externally furnished components
- Shortfalls in internally performed tasks
- Real-time performance shortfalls
- Straining computer science capabilities

NORTHROP GRUMMAN

9

Risk Identification - *SEI Risk Taxonomy 1993*

- Risks are categorized by

 class
 element
 attribute

 Risk taxonomy is intended for software, but
 - can be adapted for Systems Engineering
- Use
 - —As a check list
 - —To promote deeper thinking
 - Basis of interviews
 - —Distribute to SMEs

| | Evaluation | | | | | 5 |
| | Initial Operating Capability | 2 | | Cost | | <u> </u> |
| | Evaluation and Modification | 3 | | Schedule | | 7 |
| | Final Operating Capability | 2 | | Engineering Specialties | | 2 |
| | Deployment and support | 2 | Technology | | | |
| | Maintenance | 2 | | New technology | | 4 |
| | Upgrade and growth | 2 | | Capability | | 2 |

NORTHROP GRUMMAN

25

Final Words

Top Four Risks Sources

- Requirements = 14
- People and Facilities = 11
- Management = 7
- Schedule = 7
- Some risks sources are fairly new and therefore not yet prevalent in the literature
 - Agile methods
 - System robustness
 - Metrics
 - System of systems interoperability
 - Accelerated procurement
