Joint Training System Linkages to DRRS

Fred Hartman
Deputy Director,
OSD Readiness & Training
6 Mar 07

Joint Training System (JTS)

- Integrated, requirements-based method for aligning training programs with assigned missions consistent with command priorities, capabilities, and available resources

- Four-phased, iterative process used in:
  - Requirements
  - Plans
  - Execution
  - Assessment

Four Phases of the Joint Training System

Requirements

- **Derived from national military strategy and assigned missions**

  Based on Commander's intent & Joint doctrine

  Stated in terms of Joint mission essential tasks, conditions, and standards

Plans

- **Driven by mission requirements, training audience and tools**

  Establishes objectives to meet training requirements and create Joint Training Plan

  Guidance provided and schedules deconflicted by the CJCS and USJFCOM using JTIMS

Assessments

- **Commander assesses:**
  - **Training effectiveness**
  - **Training readiness**
  - **Joint readiness**

  Identify ability to meet Joint standards:

  strengths/deficiencies in doctrine, facilities, organization, training, materiel, leadership & education, and personnel

Execution

- **Execute and evaluate planned training events to meet identified training requirements and objectives**

  Commanders must ensure all training events are evaluated

IMPROVE JOINT FORCE READINESS

JTIMS

Joint Training Information System
(JTIMS)

- A multi-user, Web-based suite of tools that links critical DOD and joint automation programs to support JTS

- Provides automated support:

  – Training tools to joint forces and staffs preparing for joint military operations based on joint training capability requirements

  – For establishing JTS strategic guidance, goals and objectives, and responsibilities; for planning and executing joint training events/milestones

  – Provides a persistent repository for assessment data

JTIMS-DRRS Integration

- Combatant Commander's Joint Mission Essential Task List (JMETL) entered into DRRS via JMETL development tool

- JMETLs exported into JTIMS for use in the JTS and other applications, providing a common needs baseline

- JTS Phase IV Assessment and Block Assessment data exported from JTIMS to DRRS

Benefits of Linkage

- Common requirements start point for operations and training

- Training assessment data to inform DRRS unit training readiness ratings
