

Transforming USCG Logistics

A systems engineering approach to transforming the USCG Enterprise Logistics Systems

Patrick W. Cumby
Director Performance Systems

Agenda

- USCG Logistics Transformation Background
- Enterprise Transformation Basics
- USCG Logistics Transformation
- Demos of Logistics Models and Transition Dashboards

Logistics Transformation Background

- USCG has several "stovepiped" logistics business models (surface, air, shore, IT)
- Models have evolved over time and are not integrated or strategically aligned
- Some of the various models utilize modern logistics concepts, others do not
- Limited visibility into systems performance
- Limited ability to manage costs and effectiveness
- Then along comes the Deepwater program, the CFO Act, and Katrina...

Logistics Transformation Drivers

- Deepwater program recapitalization of USCG assets and capabilities
 - Deepwater program has experienced several issues that have led to a major restructuring of the program.
- CFO Act Mandate to institute total asset visibility and financial controls
- Success of Katrina disaster response demonstrated strengths of USCG Aviation logistics model

Logistics Transformation Objectives/Scope

- Admiral Allen issues CIAO #4
- Bi-level maintenance w/more standardized procedures.
- Centralized supply chain management w/spending driven by maintenance requirements.
- Disciplined/standard Coast Guard-wide engineering and logistics business processes, modeled after our internal best practices currently in use in aviation.
- Strong configuration management processes, w/associated compliance inspections, to ensure all configurations are safe, effective, and supportable when installed.
- Reduce the number of financial and information systems.

Transformation Support Team

- Logistics Transformation Program
 Integration Office (LTPIO) established
- General Dynamics contracted to provide program management
- VectorCSP contracted to support organizational and logistics transformation

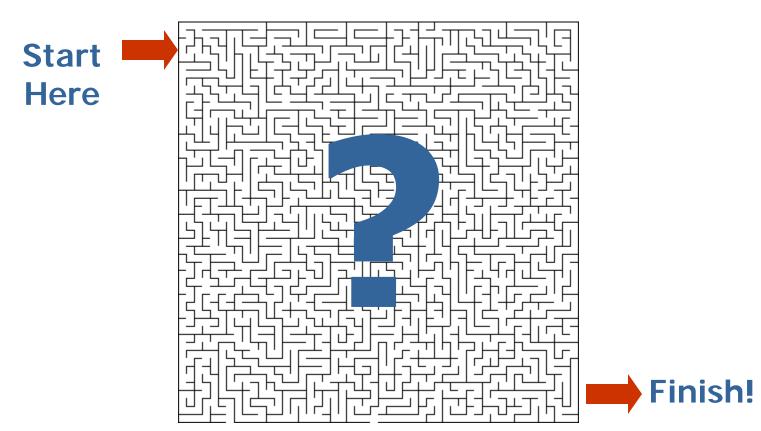

Transformation Management Approach

- LTPIO chose VectorCSP's Pathfinder approach to develop the logistics business model
- Pathfinder is a systems-oriented, tools-based transformation management methodology
- Pathfinder incorporates a complete business systems performance model, with an emphasis on behavioral engineering

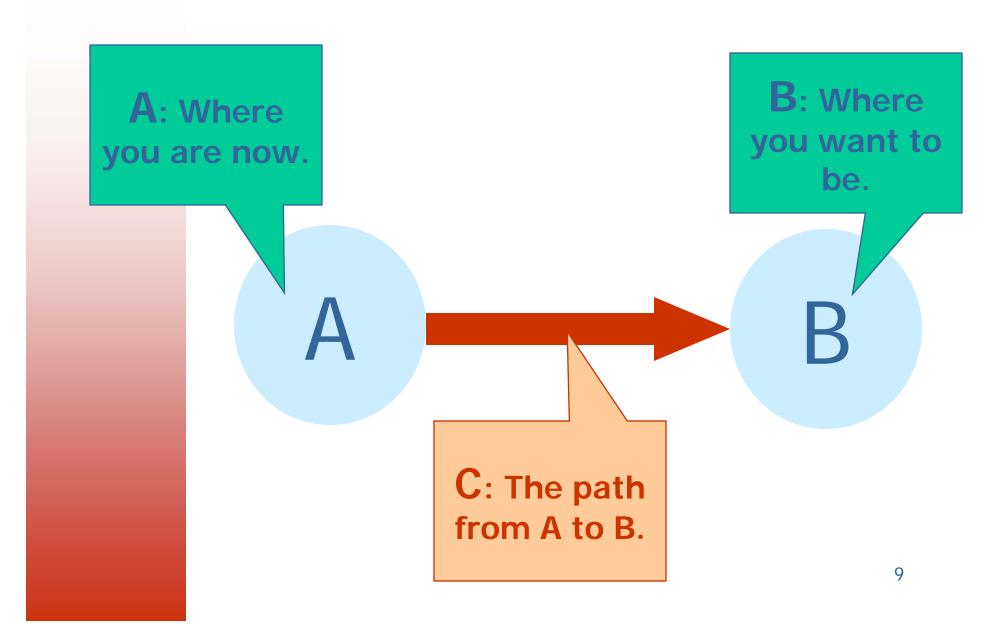

Let's go back to Org Transformation Basics!

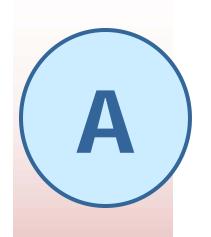

Enterprise Transformation ABCs

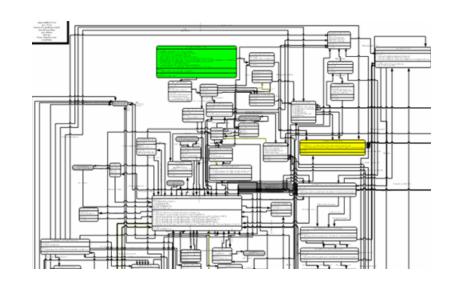

A: Where you are now.

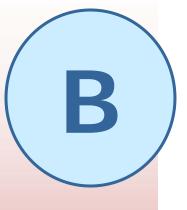

- In order to get from A to B, you have to understand A.
- A is your "As-Is" organizational and business model
- A is usually very, very complex...

Usually the important cultural and political aspects of a business model are not well documented.

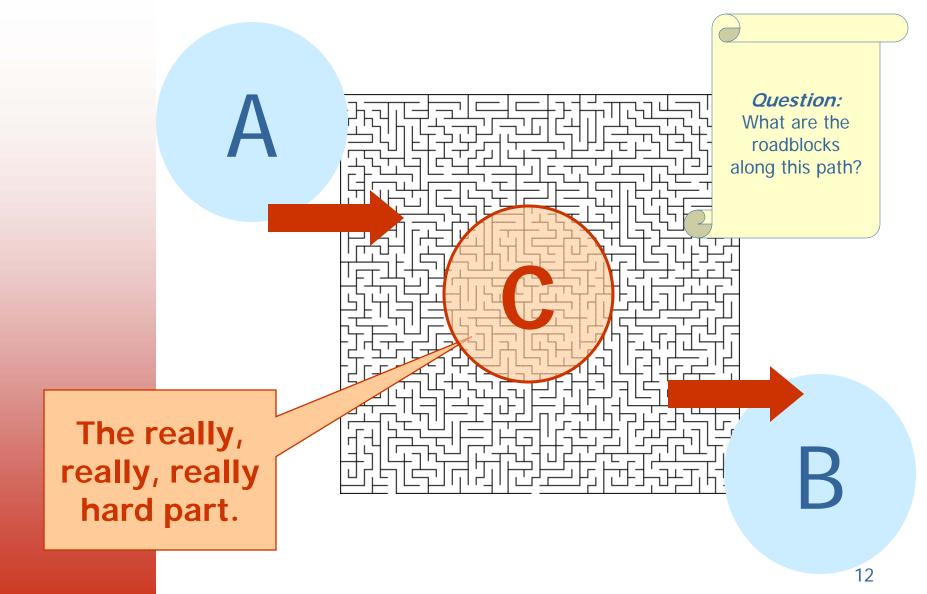

B: Where you want to be.

- In order to get from A to B, you also have to understand B.
- B is your "To-Be" organizational and business model
- B is usually not well defined...

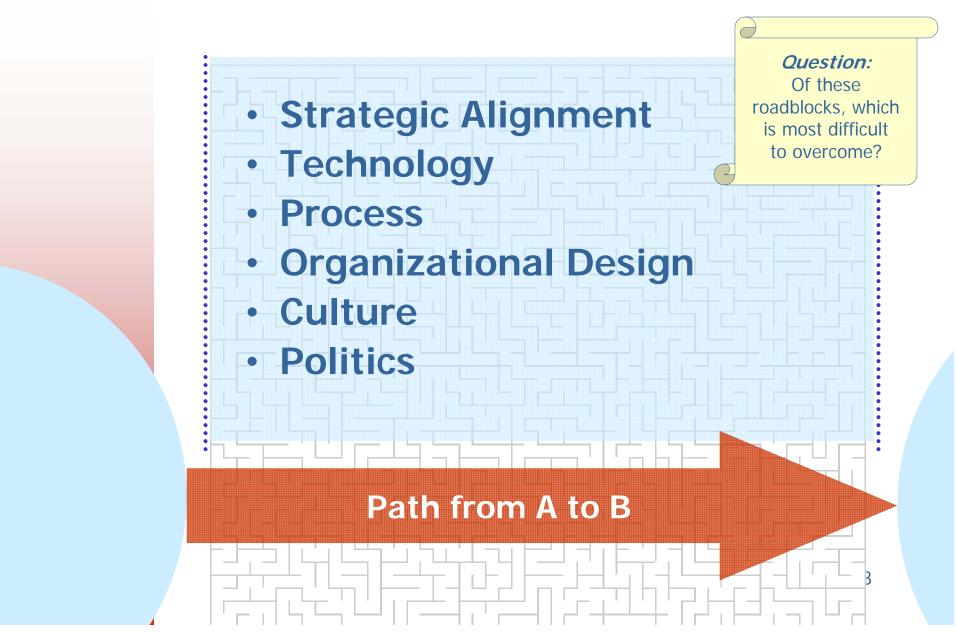

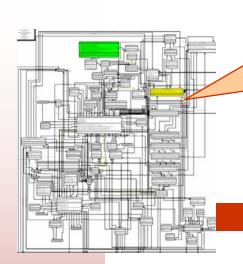

Speedbumps on the Path

To sum it up...

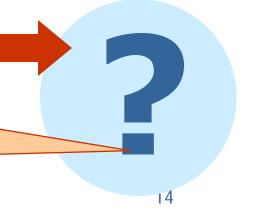

You move from a highly complex (and usually broken) system...

Question:

What percentage of enterprise transformations succeed?

...through a complex transformation process fraught with cultural, technical, and political barriers...

...to get to what is usually a poorly understood end state.

It's no wonder that 85% of all enterprise transformations Do not fully succeed!

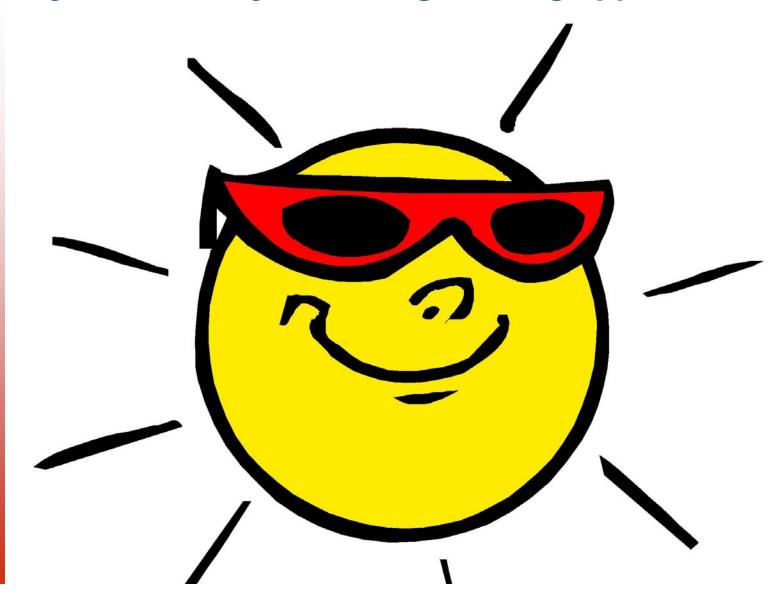

What you need to succeed

- 1. Clearly defined transformation objectives
- 2. A way to identify A and B
- 3. A roadmap to transform the **structures**, **processes**, **technology**, **culture** and **politics** of the organization
- 4. A way to manage the **astounding complexity** and **mountains of data** of such a large-scale endeavor
- 5. A way to **communicate** with all stakeholders
- 6. A way to **measure success** of the transformation
- 7. A **fully-dedicated** transformation management team

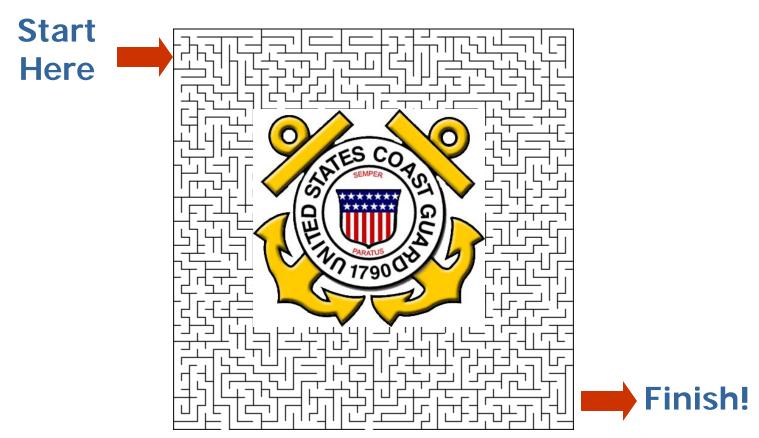

In other words...

...you need a systems engineering approach!

The Coast Guard Logistics Transformation

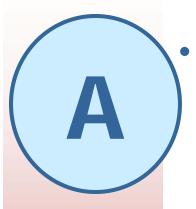

Coast Guard Transformation

B: Standard A: Separate **logistics** logistics models model based for surface and on aviation C: Logistics aviation. model. Transformation. Path from A to B **Current State Desired State**

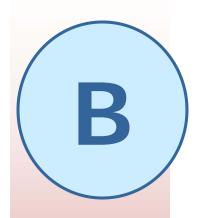

A: The "As-Is" State of CG Logistics

- Multiple logistics models (naval, aviation, shore, C4ISR)
 - Problematic logistics systems for naval, shore, and technology systems
 - Non-standard fleet assets and inventories
 - Antiquated logistics processes and technology
 - Sub-optimal acquisition model
 - Poor financial controls
- Not compliant with CFO Act
- Problems with Deepwater program
- Getting the mission accomplished despite sub-optimal logistics systems due to dedication and "can-do" attitude

B: The "To-Be" State of CG Logistics

- Adopt CG Aviation Integrated Logistics Systems (ILS) model
- Standard fleet assets and Total Asset Visibility
- Integrated technology infrastructure (based on modified ALMIS)
- Transparent and tightly controlled financials
- CFO Act Compliance
- Systems measures of effectiveness (MOEs)

C: The Path to Transition

- Commandant's CIAO establishes transformation objectives
- LTPIO established as the fullydedicated transition team
- Pathfinder Performance
 Modeling approach chosen by LTPIO as a key transformation management tool.

About Pathfinder

- Pathfinder is a dedicated transformation modeling and support system
- Designed for large-scale organizational transformations
- Pathfinder is based upon a systems engineering approach to org transformation

Performance System Engineering

 Pathfinder breaks organizational performance into discrete systems elements

- It incorporates process engineering, organizational design, enterprise architecture, and most importantly behavioral engineering
- It enables modeling of all elements that influence organizational performance
- It makes it possible to manage the complexity of a large transformation

Performance Systems Components

 Key building blocks of a **Performance Model**

System

System Outcome

Job Role or Team (People)

Strategic Objective

Policy

Technology

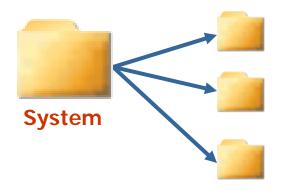

Organization

Ouestion:

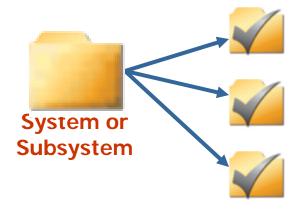

Which of these elements is most critical to performance, yet most often overlooked?

Performance Model Basics

A performance system can have multiple subsystems

A performance system is defined by its System Outcomes

The Outcome is the central element of a performance model

Examples of Systems and Outcomes

- The Coast Guard logistics performance model is based on the standard ILS (Integrated Logistics System)
- Excerpt from the CG model:

Performance Model Relationships

Modeling A and B for CG Logistics

 This "performance modeling" approach is used to create as-is (A) and to-be (B) models of CG logistics

 The next step is to develop the Logistics Transformation Model (C)

Outcomes as Key Transformation Drivers

- In the Pathfinder transformation model, system outcomes are the key transformation drivers.
- In other words, if the "to-be"
 outcome can be achieved, then the
 transformation to that part of the
 system is considered a success

Eliminating Outcome Performance Gaps

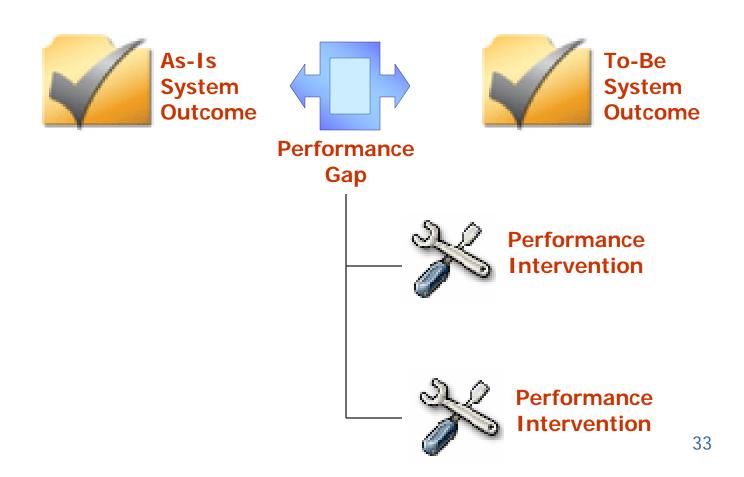

- There are typically gaps between an as-is outcome and the to-be outcome
- These gaps are recognized in our model as a performance gap element
- Some gaps are simply differences in processes or personnel
- Other gaps may require technology, infrastructure, or organizational changes to eliminate
- These gaps must be eliminated by actions called performance interventions

Elements of the Transformation Framework

 Pathfinder includes gaps and interventions as discrete elements of the transformation model

Coast Guard Intervention Examples

- Outcome: Approved Maintenance Procedure Card produced IAW COMDINST xxx.x
 - Gap: Maintenance Requirements
 List (MRL) not defined for surface
 assets
 - Intervention: Perform MSG-3 logic analysis
 - Intervention: Enroll asset in ACMS
 - Intervention: Modify MPC process guide
 - Intervention: Identify and train MPC production staff

About Interventions

- Each intervention:
 - Is an actionable item
 - Has an accountable owner
 - Has schedule constraints
 - Has associated resources
 - Can be used to build a transition project plan
 - And most importantly, has measurable success criteria

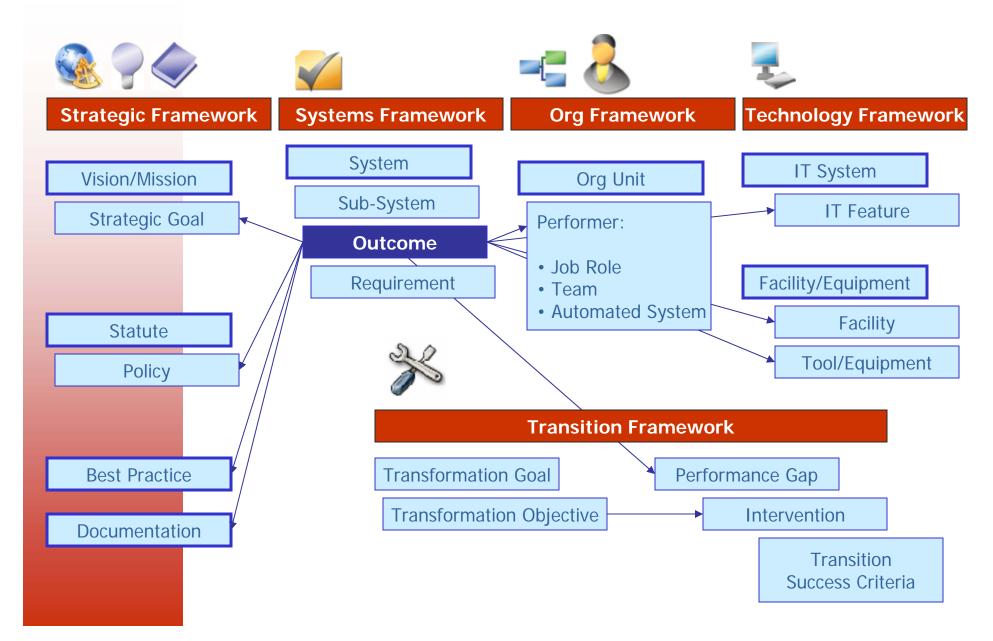

Putting the elements together...

- Strategies
- Systems
- Subsystems
- Outcomes
- Influencers (policies, organizations, people, technology, etc.)
- Gaps
- Interventions
- How does it all fit together?

Transformation Model Framework

The USCG Transition Process

- LTPIO alignment conducted, transformation objectives identified
- Docs and resources reviewed
- SMEs identified
- ILS systems outcome-based framework developed
- Best practices identified by SMEs (42)
- Preliminary outcomes identified by SMEs (800)
- Org and strategic models defined
- Key outcomes identified (250)
- Framework relationships to key outcomes identified by SMEs (docs, job roles, policies, best practices, etc.)
- Skilled Performers (SPs) identified by USCG
- SP outcome review worksheets prepared
- SP outcomes reviews and validation conducted
- All data collected in Pathfinder Performance Modeler
- All data reviewed
- Analysis reports prepared
- PVs and PIs developed using facilitated meetings with LTPIO working groups
- Activity crosswalks prepared
- Project plans and transition dashboards developed
- Transition training prepared and delivered

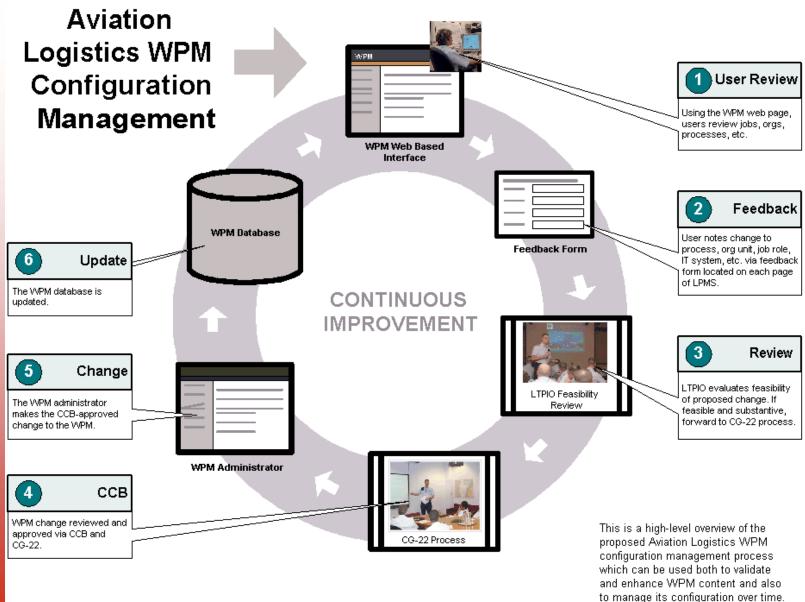

Aviation Logistics Framework Scale

- 800 aviation logistics model outcomes were identified in all 10 ILS elements (and a cross-cutting set of subelements)
- 250 Key Outcomes (transformation drivers) identified
- Key Outcomes mapped to
 - 41 Systems
 - 698 Job roles, teams, or org units
 - 80 Documents (Policy/Directives/Statutes, etc)
 - 122 IT systems and features
 - 84 Strategic elements (goals and objectives)
 - Over 600 functional and business requirements
 - Over 7,000 performance factors and influencers
- Nearly 22,000 performance relationships

Model Configuration Management

People are Key

- Changing the behavior of your people is the most difficult task of all...
- Culture and politics are the most difficult roadblocks to logistics transformation
- You've got to convince people at all levels to change the way they operate.

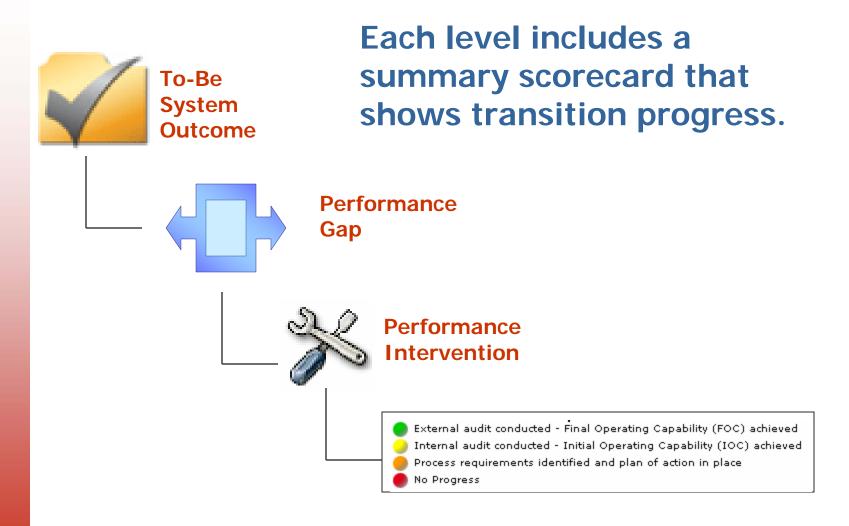

Promoting cultural and political change

- Each outcome identifies human factors influencers (technological, environmental, social, and process)
- Relationships in model indicate cultural and political power bases
- Model enables stakeholders to "see" vision
- The Transformation Dashboard is key to producing measurable changes in organization, infrastructure, processes, systems, and behavior.
- Manages and measures progress in making the changes required to achieve "to-be" outcomes

Transition Success Criteria

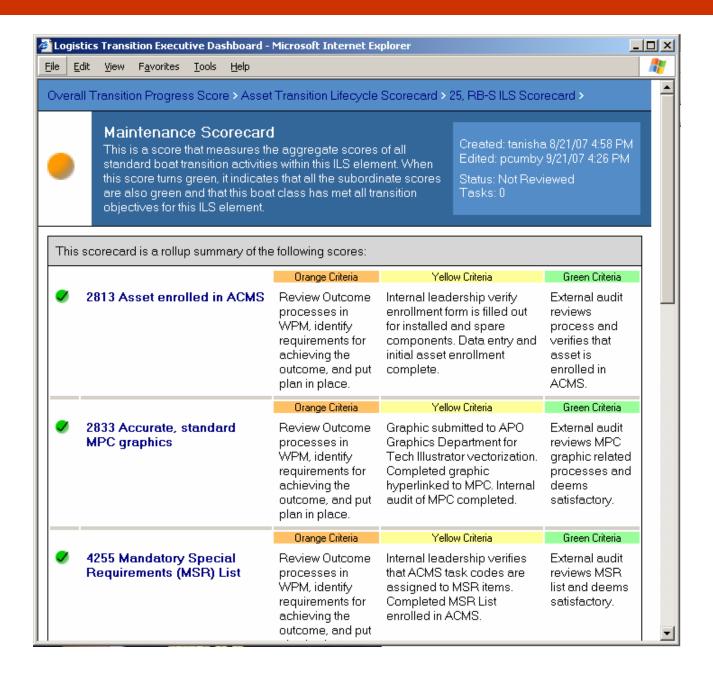

Example Success Criteria

- Outcome: Authorized Chemical List
 - Intervention: Chemical Locker Storage Established
 - Criteria:
 - Red: No Progress
 - Orange: Location for chemical storage locker identified.
 - Yellow: Authorized Chemical List established and utilization instruction developed and signed by Sector Engineering Officer.
 - Green: Personnel trained in proper storage procedures and usage of the Chemical locker IAW Hazmat plan.
 - Owner, schedule criteria, compliance inspection process, etc. defined for intervention in model

vector CSP Sample USCG Scorecard

Summary

- Performance Model Framework identifies all elements of logistics system performance
- All relationships between systems elements are defined
- Performance outcomes are central to model
- Each outcome has transition plan that identifies gaps and interventions
- Each intervention has measurable success criteria
- Success criteria form the basis for the Transition Dashboard
- Transition Dashboard drives systems, organizational, technological, and behavioral change

Demos and Questions

- USCG Logistics Performance Management System (LPMS)
- Logistics Transition Dashboard
