Introduction

- US DoD is world's largest single consumer
- Simulation Based Acquisition
- Logistics M&S lags engineering
- Increasingly important – selection discriminator

DoDD 5000.1 DoDI 5000.2
Defense Acquisition Guidebook

Definition of Simulation Based Acquisition (SBA)/(SMART)

The Army's vision for SMART is a process in which we capitalize on Modeling and Simulation (M&S) technology to address the issue of system development and life-cycle costs through the combined efforts of the requirements, training and acquisition communities.

Importance of M&S

Lessons Learned Through Acquired Experience

Apache

(Legacy system upgrades using M&S)

Crusader

(Relied heavily on M&S to support systems engineering)

Comanche

(Down select based on M&S)

Grizzly

(Revitalized the program with M&S)

Aerial Common Sensor

(Using virtual prototypes for source selection)

Future Scout and Cavalry System

(Collected Data)

Army Model & Simulation Office

Characterized Levels of DoD M&S

1. "Live" (Man vs Man)

- **Training**
- **Development**
- **Test & Evaluation**
- **Operations**

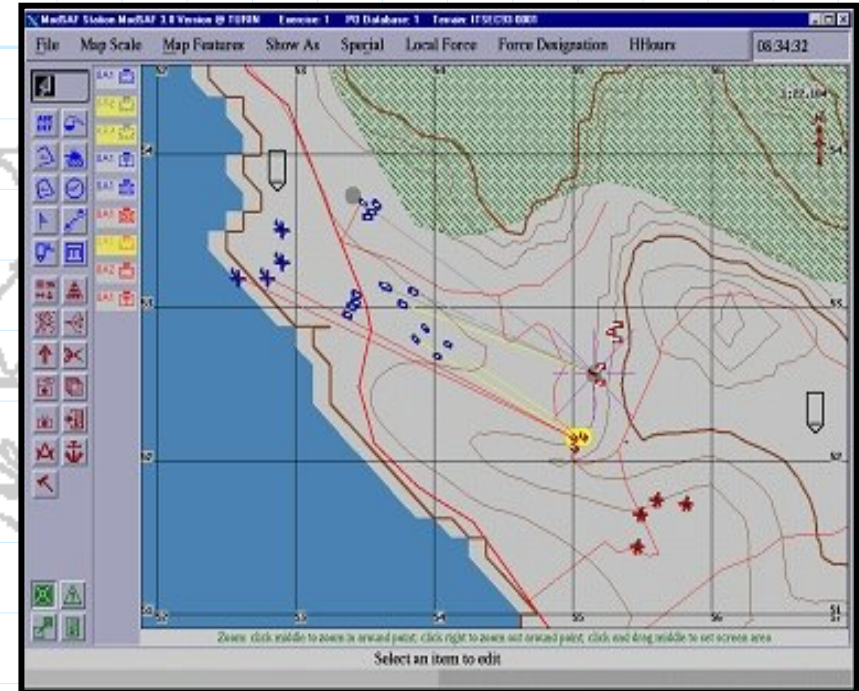

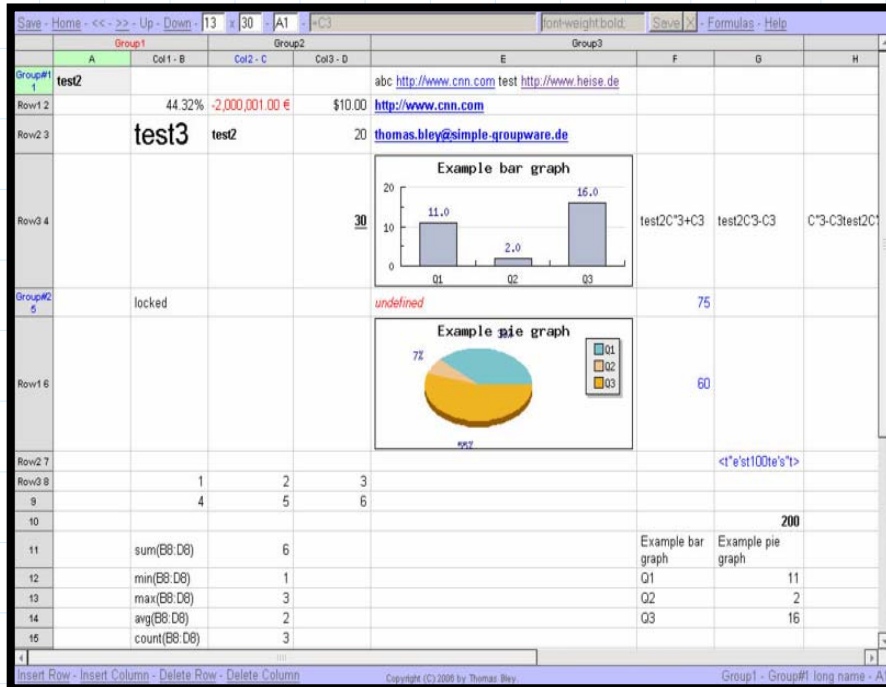

2. "Virtual" (Man vs Simulation)

3. "Constructive" (Sim vs Sim)

Static (Steady State) & Dynamic

- Relationships mathematically defined
- Dependant/Predefined (1:1)
- Equilibrium seeking
- No dynamic temporal effects

- Relationships defined many ways
- Independent & Dependent (1:n)
- Equilibrium no factor
- Dynamic temporal effects

Deterministic & Stochastic

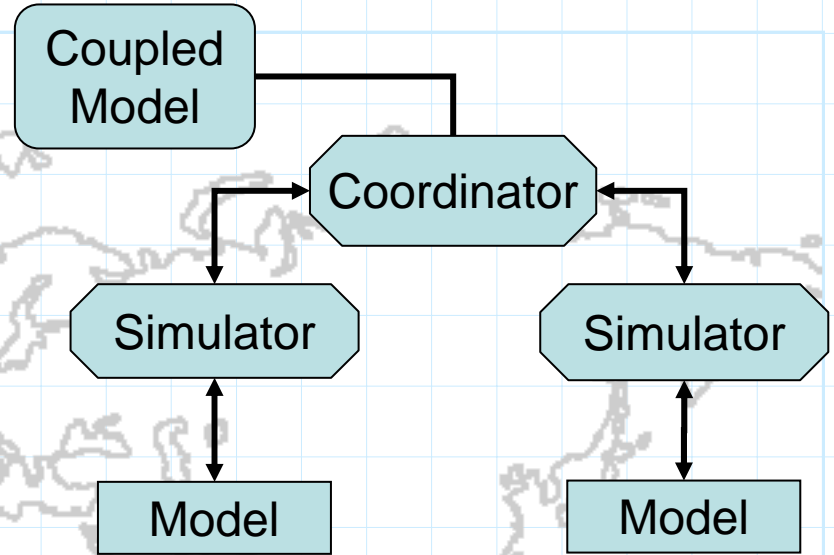

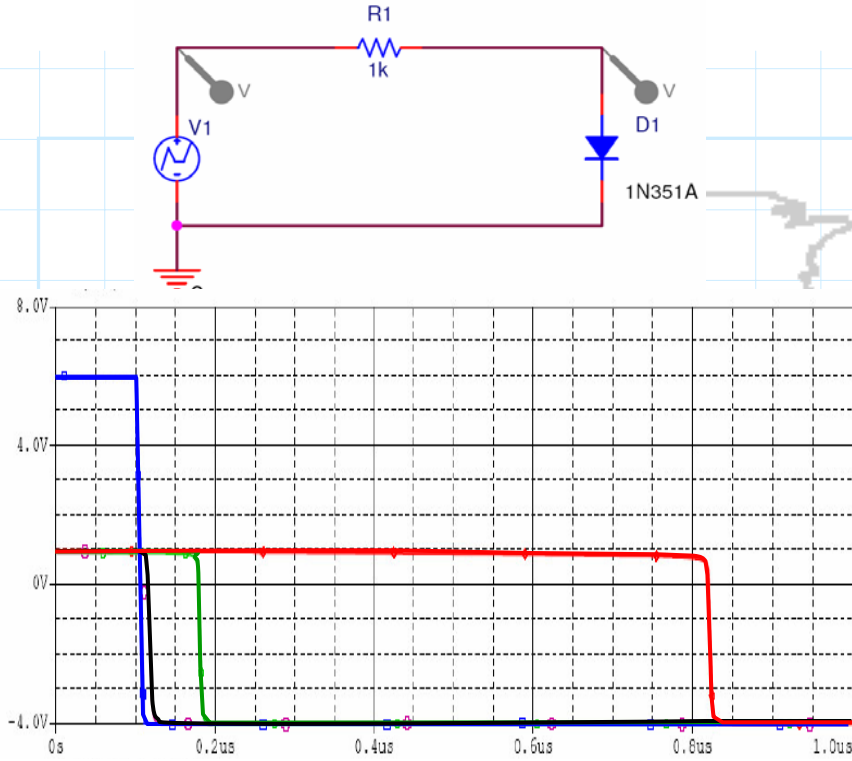

Monte Carlo

- Totally causal events & decisions
- No random events
- No “degrees of freedom”

- Indexed collection of variables
- Random number generators
- Multiple degrees of freedom

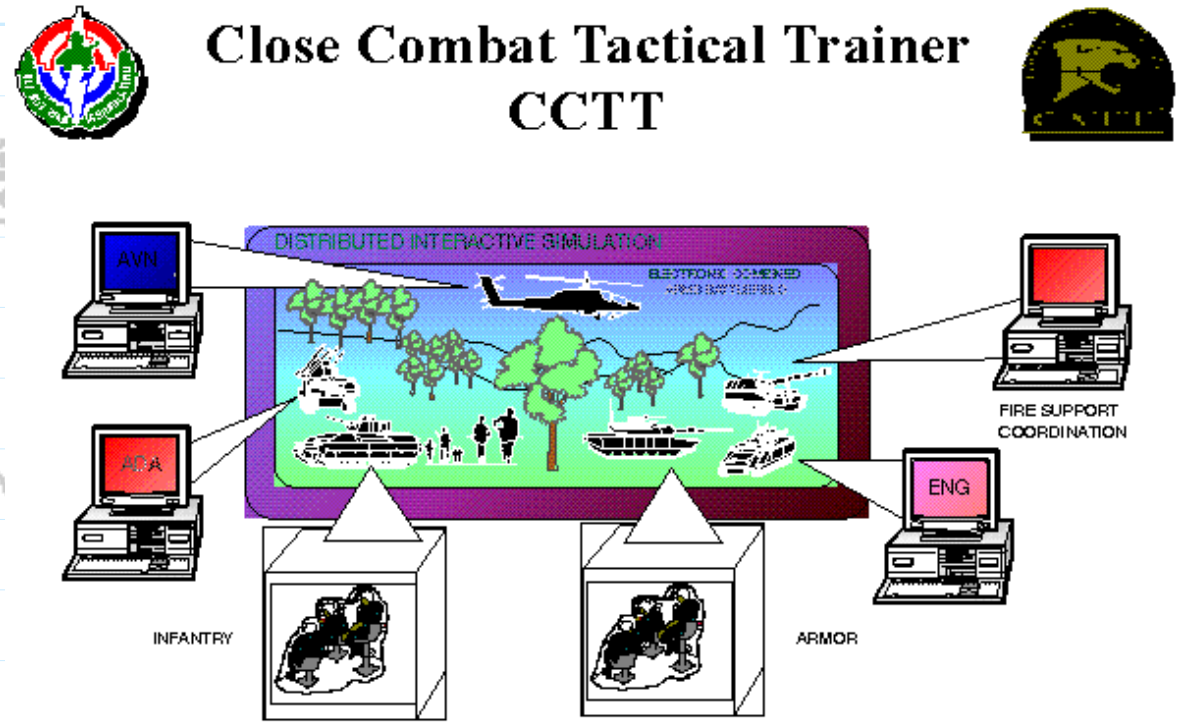

Continuous & Discrete Event

- Analog computing
- Differential Equation (partial/ordinary)
- Continuous between $f(x)$ limits
- Approximated by digital computers

- Time referenced events
- Models independent of simulators
- Models respond to events
- DEVS: Formalization = less errors

Unitary vs Distributed Simulation

- High Level Architecture (HLA).
- Test and Training Enabling Architecture (TENA)
- Aggregate Level Simulation Protocol (ALSP)
- Distributed Interactive Simulation (DIS)

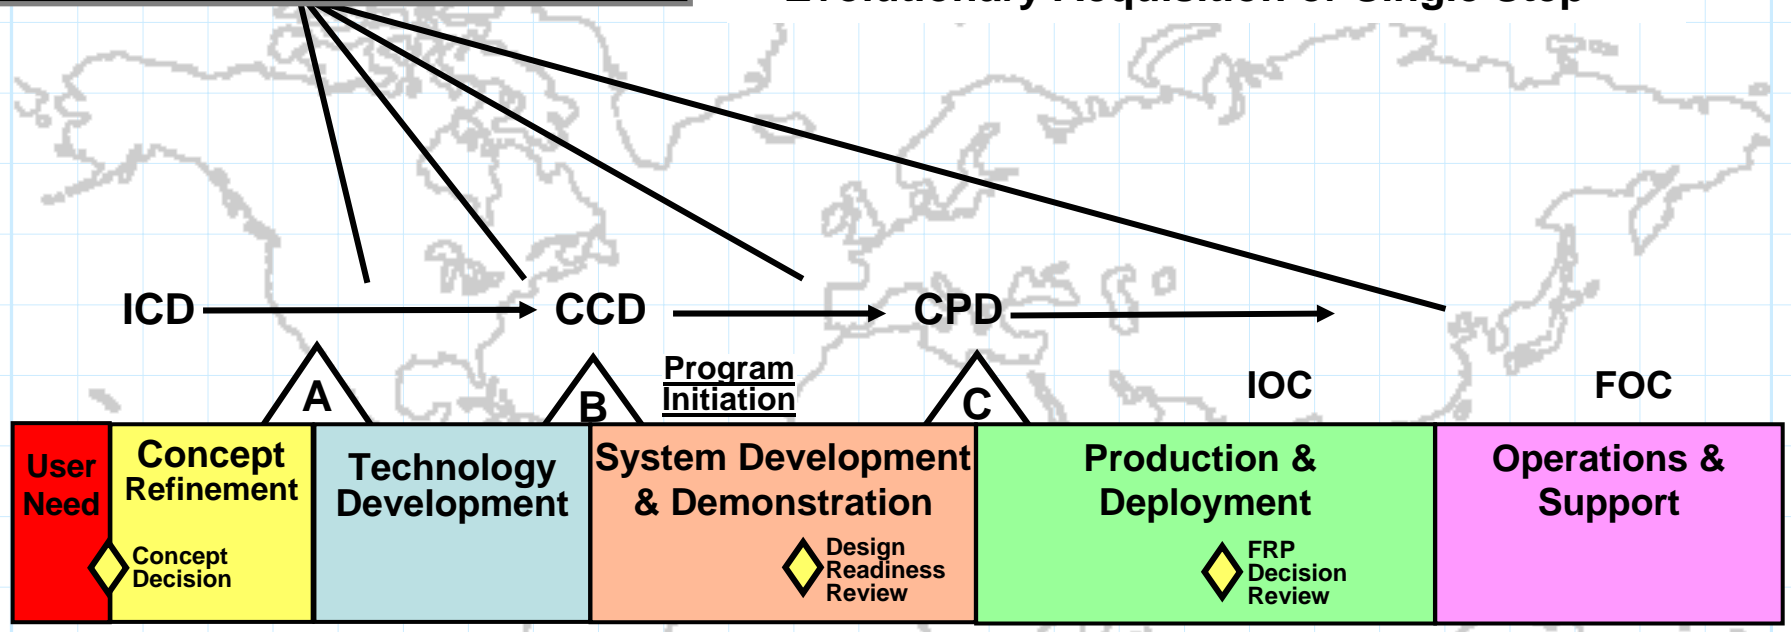

Military Logistics

- Military logistics is the science of planning and carrying out the movement and maintenance of armed forces. In its most comprehensive sense, those aspects of military operations that deal with:
 - a. design and development, acquisition, storage, movement, distribution, maintenance, evacuation, and disposition of materiel;
 - b. movement, evacuation, and hospitalization of personnel; acquisition or construction, maintenance, operation and disposition of facilities; and acquisition or furnishing of services.

DoD Acquisition Framework

- Process entry at Milestones A, B, or C
- Entrance criteria met before entering phase
- Evolutionary Acquisition or Single Step

User Needs & Technology Opportunities

Defense Acquisition Guidebook (Chap. 5.0)

Total Life Cycle Systems Management (TLCSM)

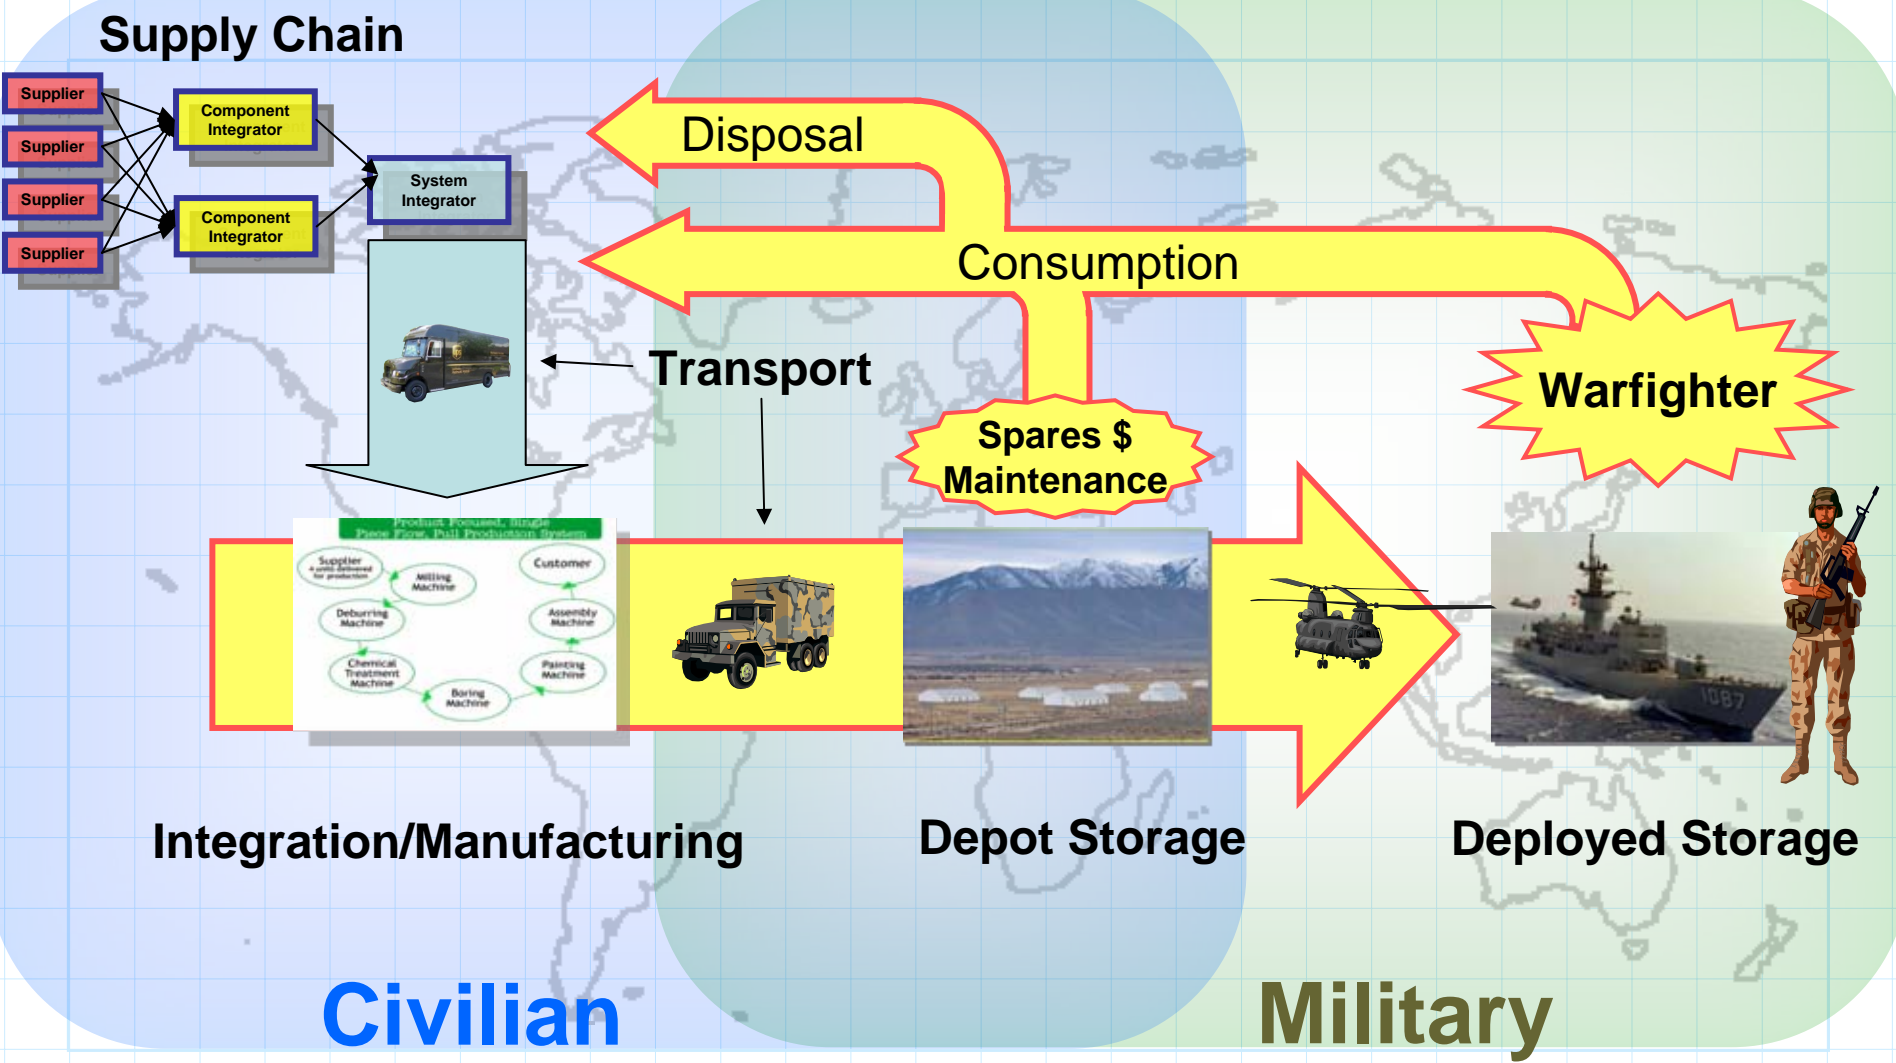

1. Supply Chain
2. Manufacturing
3. Transportation
4. Storage
5. Deployment & Disposal

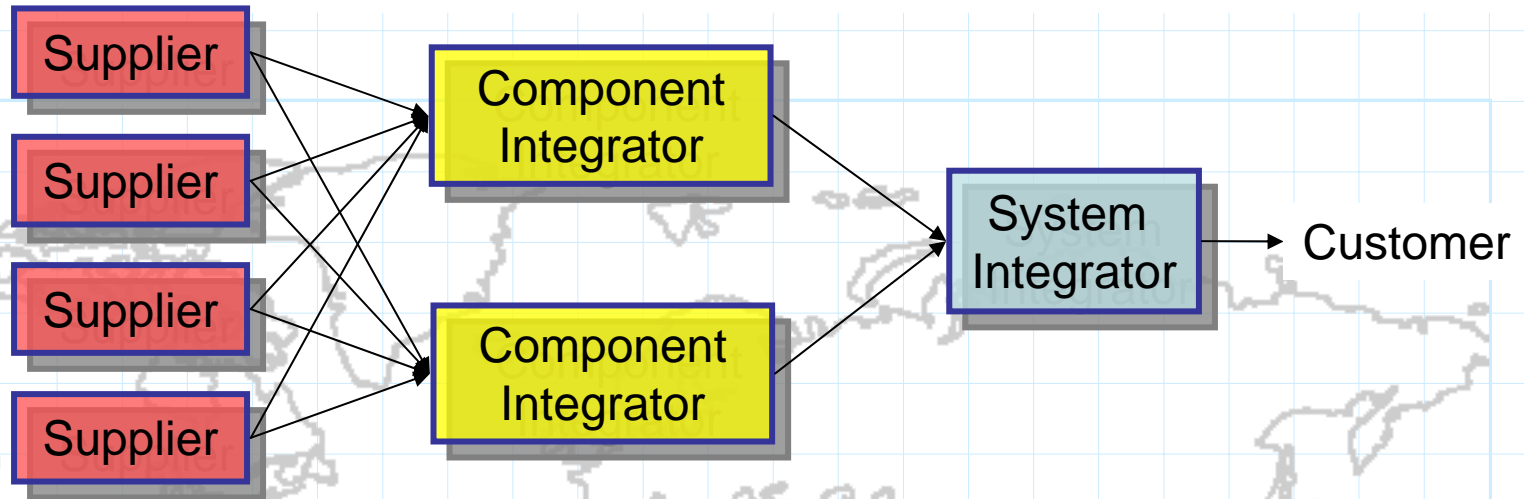

Total Life Cycle System Model

TLCSM: The PM is mandated for Life cycle Logistics(LCL), emphasis on Engineering and implementing products support through Performance Based Logistics (PBL)

Life Cycle System Model

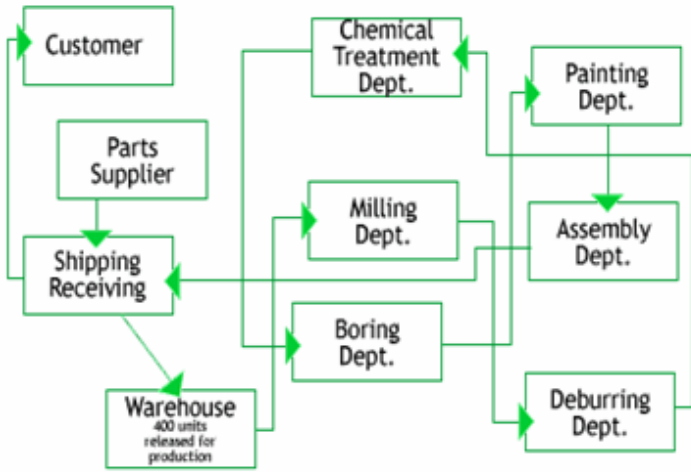

Supply Chain

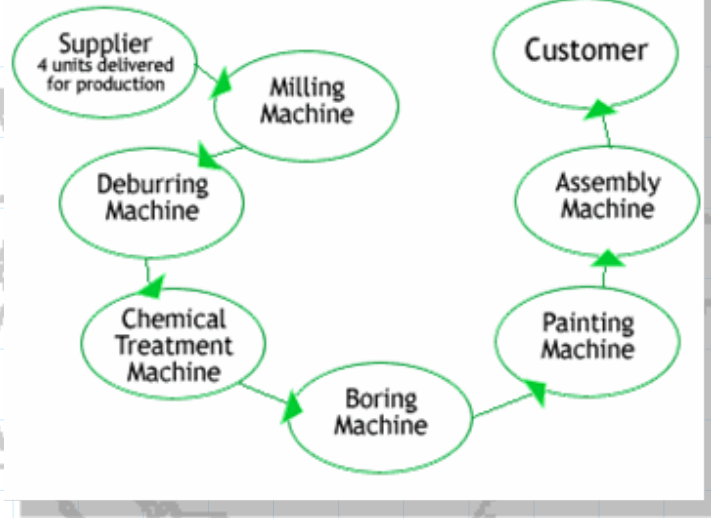

- **Manufacturing Process**
- **Low fidelity models - parameterize assumptions**
- **Obsolescence management**
- **Socio-political & economic effects**
- **KPPs:**
 - **Consumption driven – model demand drivers**
 - **Cost, capacity, lead-time, etc**

Manufacturing (Integration)

Batch and Queue Production

Product Focused, Single Piece Flow, Pull Production System

- **Optimize processes & material flow**
- **Cost (risk) reduction**
 - Dynamic – Discrete Event Simulation
 - Supply Chain model integration
- **KPPs**
 - Cost, Process, Flow
 - Resource Allocation, etc.

Transportation

- **Military & Civilian**
- **Touch Labor**
- **Damage**
- **KPPs**
 - Reliability, Availability
 - Lead Time (customs, etc.)
 - Cost, Choke Points
 - Sustainment, Surge

Storage

- **Location**
 - Depots (Strategic)
 - Theater (tactical)
- **KPPs**
 - Inventory (operations, spares)
 - Cost, availability, reliability
 - Assembly

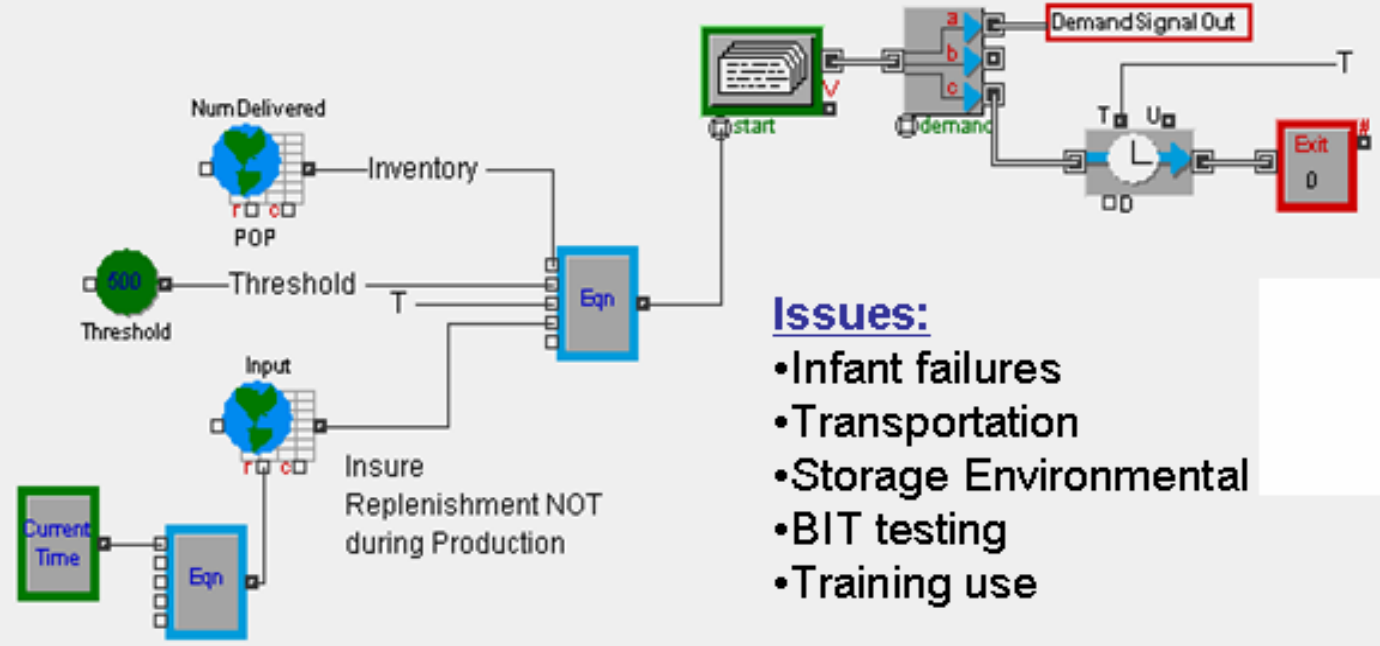

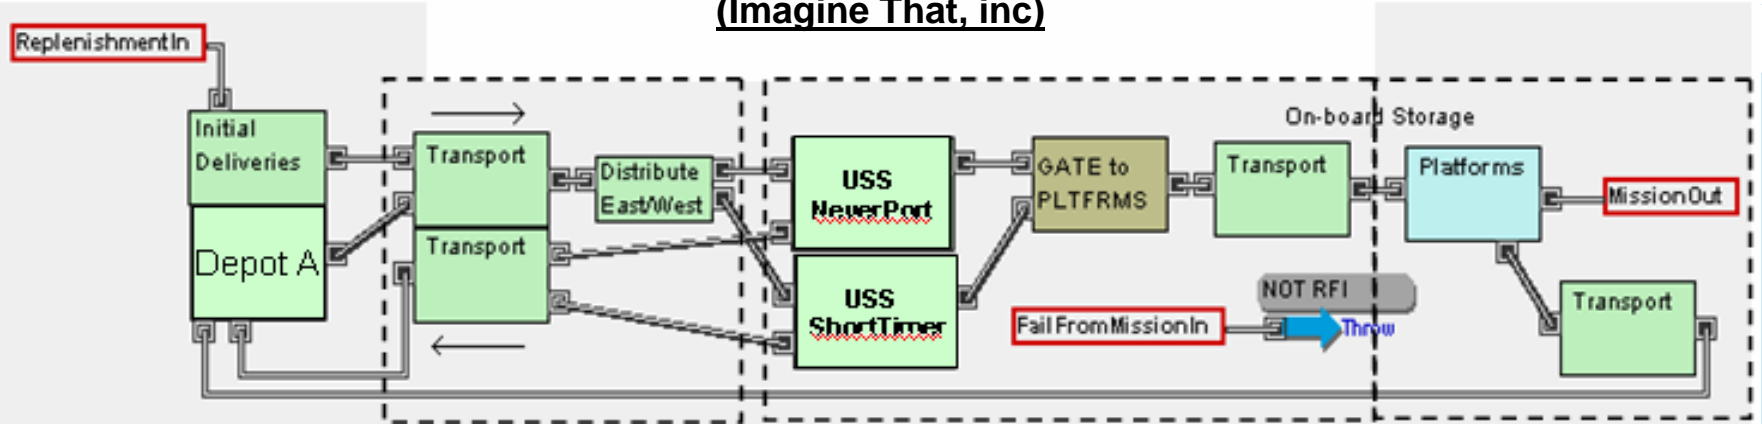

Deploy & Dispose

- Inventory levels
- Asset visibility
- Surplus or Destroy ?
- Life Extension
 - Training
 - Recycle

M&S Tool Example

Extend[®] (Imagine That, inc)

- Issues:**
- Infant failures
 - Transportation
 - Storage Environmental
 - BIT testing
 - Training use

M&S Resources

• Military

- Defense Modeling & Simulation Office (DMSO)
- Modeling and Simulation Information Analysis Center (MSIAC)
- Advanced Air Force Modeling & Simulation (AFAMS)
- Navy Modeling & Simulation Office (NMSO)
- Army Modeling & Simulation Office (AMSO)
- Army Simulation, Training & Instrumentation (PEO STRI)
- National Security Council (NSC)

• Industry

- Simulation Interoperability Standards Organization (SISO)
- Association of Computing Machinery (ACM)
- Society for Modeling and Simulation International (SCS)

• Academia

University of Arizona

Georgia Institute of Technology

University of Pennsylvania

INFORMS College on Simulation

Old Dominion University

California State University

University of Magdeburg

University of Central Florida

Conclusion

- **M&S is increasingly important in Military Logistics**
 - Contractually required by many DoD programs
- **Beneficial in all phases of life cycle**
- **Highly useful in logistic modeling & management**
 - Highly granular (high fidelity)
 - Dynamic inventories & environments
 - Interoperable with engineering & operational models
- **Source selection discriminator**
 - Total Lifetime Cost analysis (TLC)
 - Logistic support capability
