# Outline

- **Air Armament Center  
Systems Engineering  
Assessments**
  - Why
  - How
  - What we Learned
  - Futures

*Today is a Discussion not a Lecture – Please Stop me Anytime!*

# Direction & Goals

- In 2006, EN Tasked to:
  - Perform a Center-wide SE Assessment
  - Found Out Where We Are?
  - Baseline Enterprise Process Improvement

- Goals
  - Improve Program Performance & Reduce Technical Risk
  - Ensure a Consistent Understanding of SE
  - Ensure Core SE Processes are in Place and Being Practiced
    - Identify Opportunities for Continuous Improvement
    - Clarify Roles and Responsibilities
  - Institutionalize “Best Practices”

# Our Approach

- **Define Systems Engineering Best Practices**
- **Benchmark Systems Engineering Implementation**
- **Establish a Baseline for Continuous Improvement**
  - **Begin Changing the Culture to Kaizen**
- **Phased Approach – 3 Phases**

*2006*

*2007-2008*

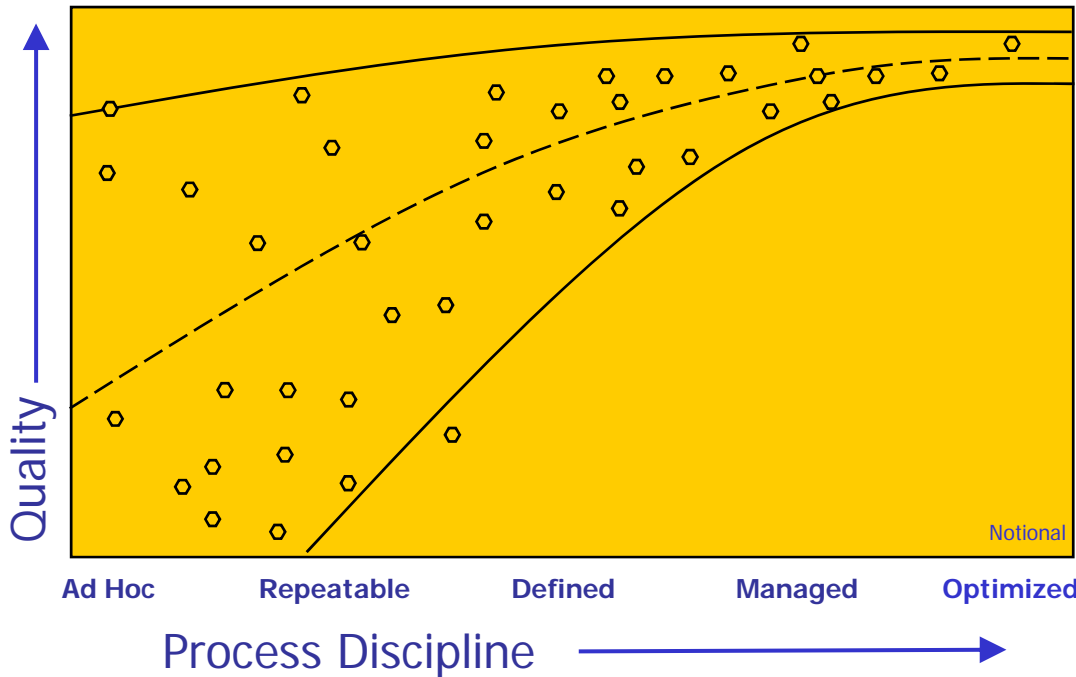

*2008-2009*

# Focus on Process

- **The Quality of a System or Product is Highly Influenced by the Quality of the Process Used to Develop and Maintain It**

CMMI Performance Results Summary		
	Median Improvement	Number of Data Points
Cost	34%	29
Schedule	50%	22
Productivity	61%	20
Quality	48%	34
Customer Satisfaction	14%	7
ROI	4.0 : 1	22

CMU/SEI-2008-TR-004

- **Process Discipline Leads to:**
  - **Predictable Program Performance**
  - **Ability to Deliver on our Commitments**

*Institutionalized Process Driven SE » Lower Risk Technical Programs*

# AAC SEA Model Development

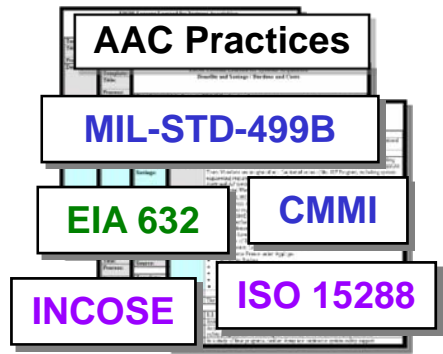

**CMMI® Acquisition Module (CMMI-AM), Version 1.0**

**May 2006**  
CMMI-AM Tailored for Air Armament Center Systems Engineering Implementation Assessment

**Oct 2007**  
Systems Engineering Assessment Model (SEAM) Version 2.0  
1 October 2007

30 + Assessments

**Systems Engineering Assessment Model**  
**Aug 2008**

## Systems Engineering Assessment Model v2.4

- 10 Process Areas
- 33 Specific Goals
- 115 Practices
- 7 Generic Practices
- 67 Qualifying Questions
- 47 Pages

**Streamlined CMMI**

**Compliant with AF-SEAM v1.0**

**Industry/Academia**

- SEI, NDIA, Boeing, Raytheon, etc.
- USC, AFIT, etc.

**OSD Guidance**

- DAG
- SEP Guidance

**AF Guidance**

- AFI 63-1201
- AFPD OSS&E

**AFMC Guidance**

- AFMCI 63-1201
- OSS&E

**Other Centers**

- ESC
- SMC

*AAC Assessment Model Based on International, Industry and DoD Best Practices*

# Current Process Areas

- **Technical Process Areas**
    - Requirements
    - Design
    - Manufacturing
    - Verification & Validation
    - Fielding & Sustainment
  
  - **Project Process Areas**
    - Project Planning
    - Risk Management
    - Configuration Management
    - Decision Analysis
    - Technical Assessment
- **Introduction**
  - **Goal**
    - Practices
    - Grey Matter
    - Question(s)
  - **Goal...**
    - Generic Practices
  - **Question(s)**

*AAC-SEAM v2.4*

# Criteria for Methodology

- **Objective Assessment**
- **Provide insight into Government, Prime Contractors and Subs Process & Capability**
- **Facilitate Self Assessment & Continuous Improvement**
  - **Lean & Six Sigma**
- **Consistent Near and Far Term Approach**
- **Provide Results that are meaningful for leadership**
  - **Relevant to PM/PEO**
  - **Simple**
  - **Understandable**
  - **Graphical**
- **Support Multi-level Measurement & Reporting**
  - **Program, Group, Wing, Enterprise**

# SEA Methodology

Training & Preparation...

Acquirer & Supplier

Project Team  
Self-Assessment

Leadership  
Review Board

SEA Team  
Peer Review

Co-chaired by Chief of Systems Engineering and Line Engineering Functional

Team Chaired by Senior Systems Engineer  
Members from Across Multiple Programs

Assessment Process Time Required  
Leadership – 8 person hrs  
Project Team – 60-100 person hrs  
SEA Team – <50 person hrs

*SEA Assess What Practices are Implemented NOT How Well Executed  
Future: Begin to Shift Focus to “How To” and Quality of SE Implementation*

# Products Provided to Program

- **Training & Self Assessment**
- **Peer Review**
- **Collaboration & Feedback**
- **Validated Assessment**
- **Summary Memorandum**
  - **Findings & SE Improvement Recommendations**

# Benchmarking the Enterprise

## Process Area Criteria\*

- >90% of Practices
- 65-89% of Practices
- <65% of Practices

## Program Criteria

- >90% of Practices, No Red
- 65-89% of Practices, NTE 1 Red
- <65% of Practices, 2 or More Red

as of 8 Jan 07

	Key Process Areas									
	R	D	V	T	P	TA	RM	CM	DA	Pgm

<b>Center Average</b>	Yellow	Yellow	Green	Yellow	Yellow	Yellow	Green	Green	Red	Red

\* Weighting  
SPs 75%  
GPs 25%

## Portfolio Criteria

- 95% Programs Green
- 75%-95% Programs Green, <10% Programs Red
- <75% Programs Green or >10% Programs Red

# Lessons Learned

- **Personnel Resources are Stretched and Need SE Training & Experience**
- **Process and Procedures are Needed to Ensure More Repeatable/Consistent Application of SE**
- **Product Line Specific Guidebook Capturing Eglin Experience in Weapons Desired**

# The Good

- **Requirements Control & Verification Working Group**
- **Iterative Requirements & Design Trade-off Working Group**
- **Concurrent Engineering to Ensure Successful Transition to Production**
- **Contract Incentives for Reducing Cost and Increasing Reliability**
- **Full Trust Integrated Teaming**
- **Integrated & Overarching Risk Management Strategy**

*“Following MIL-STDs was Better than Having No Process at All”*

# The Bad

Legend R - Requirements V - Ver/Val P - Planning CM - Config Mgmt TA - Tech Assessment  
 D - Design T - Transition RM - Risk Mgmt DA - Decision Analysis

Decision Analysis	RED
Planning	YELLOW
Requirements	
Risk Management	
Verification & Validation	
Transition	
Technical Assessment	
Design	
Configuration Management	GREEN

Better

- Areas that Need Work
  - Requirements
  - Decision Analysis
  - Planning
  - Process Integration Particularly Risk Management
- Model Expansion Needed
  - Manufacturing (Transition to Production)
  - Sustainment

*Added in Version 2.0*

# Requirements Weaknesses

- **Design Mission Reference Profiles (RG1P2)**
  - **Comprehensive Definition of Product Characteristics in Engineering Terms and Documentation of the Interaction of the Product with the Environment, Other Systems, and Operational Users [Willoughby].**

*Do we understand the edges of the technical performance envelope?*

- **Validate Requirements (RG2P3)**
  - **Ensure the Evolving Product will Perform as Intended in the Operational Environment [CMMI].**

*Do the derived requirements accurately and completely represent what is needed? and no more... How were they validated?*

Reference: AAC SEAM v2.4

# Some Solutions

- **Develop Valid Mission Reference Profiles to Support Design**
  - **Validate** Concepts of Employment
  - Obtain **Accredited** Simulation Capability Including Carriage, Separation, Fly-out
    - Engage Independent Subject Matter Experts
    - Discover & Examine Stressing Conditions
  - **Anchor** the Models with Data
    - Test Prototypes in Wind Tunnel
    - Test Instrumented Flight Vehicles in Carriage, Separation and Fly-out Modes
- **Test** Sample Conditions of All Configurations With Representative Hardware Early and Allow Schedule for Issue Resolution

Evaluate All  
Load-Out  
Conditions

*Vibration*

*Acoustics*

*Temperature*

*Electromagnetic*

*Aerodynamic*

# Sustainment Weaknesses

- **Establish Operational, Suitability and Effectiveness Baselines (SG4P1)**
  - **Conduct Health Monitoring and Verification to Ensure Fielded Product Matches Baseline Performance [AFMCI]**

*How do we assure the products continued safety & performance?*

- **Perform Audits to Maintain Integrity (CMG3P2)**
  - **Ensure Processes for Maintaining the Integrity of the Fielded Configuration are Effective [CMMI].**

*How do you know if Time Critical Technical Orders are compete?*

Reference: AAC SEAM v2.4

# AF-SEAM Background

- **In 2006, USAF Material Command Engineering Council Action Item to:**
  - Provide an USAF-wide SE Assessment Model
  - Involve USAF Centers (product and logistics)
  - Leverage current CMMI®-based models in use at AF Centers
  - Baseline Process Capability & Usage
- **AF Systems Engineering Assessment Model:**
  - A single AF-wide tool which can be used for the assessment and improvement of systems engineering processes in a program/project.

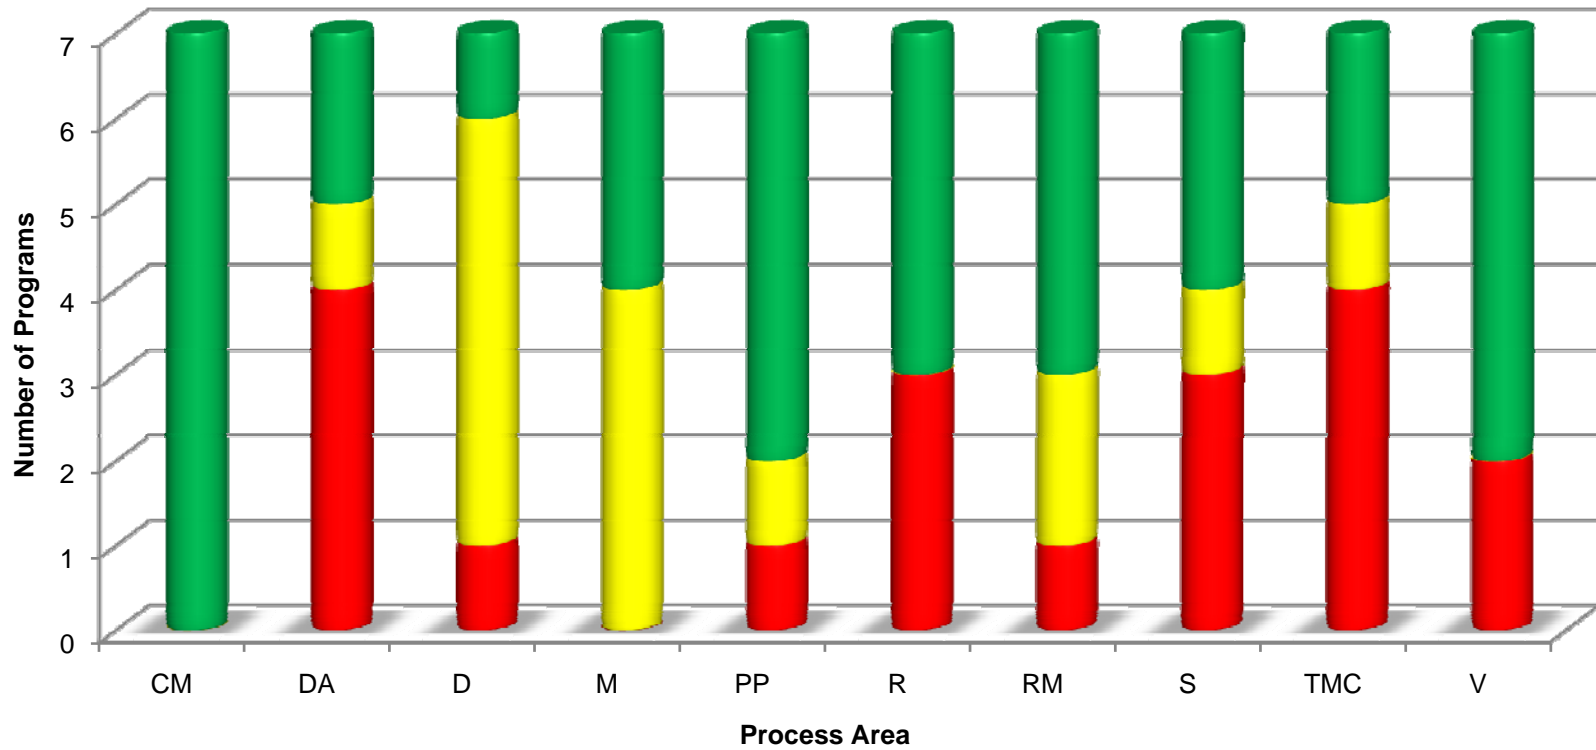

*Version 1.0 Completed August 2008*

# AF-SEAM SP Roll-Up

## Specific Practice Assessment Results XXX Center

# AF-SEAM GP Roll-Up

## Generic Practice Assessment Results XXX Center

# Future Concept

## Key Process Area: Manufacturing or TMC

**Goal:** – Product and process quality is assessed and improved.

Stratified  
Criteria

### Practice:

Notional

P1 Establish and maintain a quality management system.

- 5: *The developer and major suppliers have an ISO 9000/AS9100 certified operation with recent AS9101 audit at relevant locations.*
- 4: *The developer has an ISO 9000/AS9100 certified operation with recent AS9101 audit at relevant locations.*
- 3: *The developer is meeting the intent of ISO 9000/AS9100 with a recent independent quality audit at relevant locations.*
- 2: *The developer has an effective quality management system that includes suppliers with no recent independent audit.*
- 1: *The developer has not demonstrated an effective quality management system.*

*Rungs Facilitate 1) Self Assessment, 2) Training and 3) Steps for Improvement*

# Summary

- **Goal is to Continue to Improve Program Performance**
  - Too Many Examples of Program Performance/ Issues Being Tracked Back to Lack of Systems Engineering Discipline
- **Long Term Goal – Revitalizing Systems Engineering**
  - Need to Follow “Best Practices”
  - Need to Do them “Well”
  - Need to Ensure that Our Program Teams Have What they Need
    - Qualified People, Process Discipline, Tools/Technology

1. What to do?

2. How to do it?

3. How to Sustain it?

*Where there is no standard there can be no Kaizen*

*– Taiichi Ohno*

改善

*Kai-zen*

*The Art of Continuous Improvement*

*Kai-zen must operate with three principles in place:  
process and results, systemic thinking, and non-blaming  
(because blaming is wasteful).*
