

- **Harris Corporation has an organizational-centric vs. CMMI[®]-centric set of integrated processes**
 - Intuitive and closely aligned to the organization's proven best practices
 - Provides process compliance mapping to the CMMI[®]
- **Process Compliance Monitor (PCM) tool to automate the monitoring of all project compliance to the integrated processes**
 - Organization can monitor CMMI[®] compliance through the built-in mapping
- **The organizational Process Management staff assists projects**
 - Training the organizational-centric integrated processes
 - Training the organization's PCM tool
 - Supporting RFPs identifying CMMI[®] appraisals
- **Pre-appraisal preparation for a SCAMPI Class A**
 - The projects are given an overview briefing explaining the SCAMPISM process, roles and responsibilities, and plans/schedules
 - Evidence is gathered from the PCM tool
 - Reviewed by internal appraisers for corrective actions
 - Projects respond to the corrective actions
 - The project develops an process overview briefing describing organizational/project terminology, project processes, and project scope

Integrated Process Overview

Challenges	Solutions
Difficulty understanding typical work products	Expected work product definitions created to map typical work product to organizations processes and CMMI process areas
Quantity of project work products to required organizations processes	Identified a minimum set of standard unique project work products for all projects to use
Recursive and periodic activities (e.g., trade studies, monthly meetings)	Provide links to more directories containing multiple examples
Different appraisal team may vary in their styles	Understand what will be evaluated and role of site coordinator
