Outline

- **Air Armament Center Systems Engineering Assessments**
 - Why
 - How
 - What we Learned
 - Futures

Today is a Discussion not a Lecture – Please Stop me Anytime!

Direction & Goals

- In 2006, EN Tasked to:
 - Perform a Center-wide SE Assessment
 - Found Out Where We Are?
 - Baseline Enterprise Process Improvement

- Goals
 - Improve Program Performance & Reduce Technical Risk
 - Ensure a Consistent Understanding of SE
 - Ensure Core SE Processes are in Place and Being Practiced
 - Identify Opportunities for Continuous Improvement
 - Clarify Roles and Responsibilities
 - Institutionalize “Best Practices”

Our Approach

- **Define Systems Engineering Best Practices**
- **Benchmark Systems Engineering Implementation**
- **Establish a Baseline for Continuous Improvement**
 - **Begin Changing the Culture to Kaizen**
- **Phased Approach – 3 Phases**

2006

2007-2008

2008-2009

Focus on Process

- **The Quality of a System or Product is Highly Influenced by the Quality of the Process Used to Develop and Maintain It**

CMMI Performance Results Summary		
	Median Improvement	Number of Data Points
Cost	34%	29
Schedule	50%	22
Productivity	61%	20
Quality	48%	34
Customer Satisfaction	14%	7
ROI	4.0 : 1	22

CMU/SEI-2006-TR-004

- **Process Discipline Leads to:**
 - **Predictable Program Performance**
 - **Ability to Deliver on our Commitments**

Institutionalized Process Driven SE » Lower Risk Technical Programs

AAC SEA Model Development

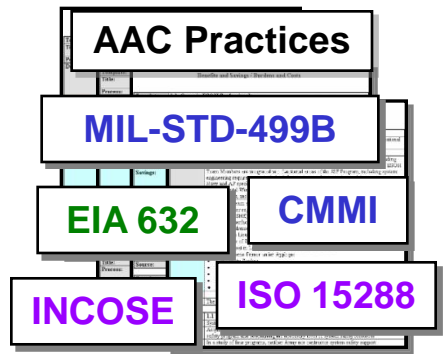

CMMI® Acquisition Module (CMMI-AM), Version 1.0

May 2006
CMMI-AM Tailored for Air Armament Center Systems Engineering Implementation Assessment

Oct 2007
Systems Engineering Assessment Model (SEAM) Version 2.0
1 October 2007

30 + Assessments

Systems Engineering Assessment Model
Aug 2008

Systems Engineering Assessment Model v2.4

- 10 Process Areas
- 33 Specific Goals
- 115 Practices
- 7 Generic Practices
- 67 Qualifying Questions
- 47 Pages

Streamlined CMMI

Compliant with AF-SEAM v1.0

Industry/Academia
• SEI, NDIA, Boeing, Raytheon, etc.
• USC, AFIT, etc.

OSD Guidance
• DAG
• SEP Guidance

AF Guidance
• AFI 63-1201
• AFPD OSS&E

AFMC Guidance
• AFMCI 63-1201
• OSS&E

Other Centers
• ESC
• SMC

AAC Assessment Model Based on International, Industry and DoD Best Practices

Current Process Areas

- **Technical Process Areas**
 - Requirements
 - Design
 - Manufacturing
 - Verification & Validation
 - Fielding & Sustainment
- **Project Process Areas**
 - Project Planning
 - Risk Management
 - Configuration Management
 - Decision Analysis
 - Technical Assessment
- **Introduction**
- **Goal**
 - Practices
 - Grey Matter
 - Question(s)
- **Goal...**
 - Generic Practices
- **Question(s)**

AAC-SEAM v2.4

Criteria for Methodology

- **Objective Assessment**
- **Provide insight into Government, Prime Contractors and Subs Process & Capability**
- **Facilitate Self Assessment & Continuous Improvement**
 - **Lean & Six Sigma**
- **Consistent Near and Far Term Approach**
- **Provide Results that are meaningful for leadership**
 - **Relevant to PM/PEO**
 - **Simple**
 - **Understandable**
 - **Graphical**
- **Support Multi-level Measurement & Reporting**
 - **Program, Group, Wing, Enterprise**

SEA Methodology

Training & Preparation...

Acquirer & Supplier

Project Team Self-Assessment

Leadership Review Board

High Value

SEA Team Peer Review

Co-chaired by Chief of Systems Engineering and Line Engineering Functional

Team Chaired by Senior Systems Engineer
Members from Across Multiple Programs

Assessment Process Time Required
Leadership – 8 person hrs
Project Team – 60-100 person hrs
SEA Team – <50 person hrs

*SEA Assess What Practices are Implemented NOT How Well Executed
Future: Begin to Shift Focus to “How To” and Quality of SE Implementation*

Products Provided to Program

- **Training & Self Assessment**
- **Peer Review Collaboration & Feedback**
- **Validated Assessment**
- **Summary Memorandum**
 - **Findings & SE Improvement Recommendations**

Benchmarking the Enterprise

Process Area Criteria*

- >90% of Practices
- 65-89% of Practices
- <65% of Practices

Program Criteria

- >90% of Practices, No Red
- 65-89% of Practices, NTE 1 Red
- <65% of Practices, 2 or More Red

* Weighting
SPs 75%
GPs 25%

as of 8 Jan 07	Key Process Areas									
	R	D	V	T	P	TA	RM	CM	DA	Pgm
Program #1	Yellow	Green	Green	Yellow	Yellow	Yellow	Green	Green	Red	Green
Program #2	Green	Green	Green	Green	Yellow	Yellow	Green	Green	Red	Green
Program #3	Yellow	Green	Green	Green	Yellow	Yellow	Red	Green	Red	Red
Program #4	Yellow	Green	Red	Yellow	Yellow	Yellow	Green	Green	Red	Red
Program #5	Green	Green	Green	Green	Yellow	Yellow	Yellow	Green	Red	Yellow
Program #6	Yellow	Green	Green	Green	Red	Yellow	Yellow	Green	Red	Red
Program #7	Yellow	Green	Green	Yellow	Red	Yellow	Yellow	Green	Red	Red
Program #8	Red	Red	Red	Red	Yellow	Yellow	Red	Green	Red	Red
Program #9	Yellow	Green	Green	Yellow	Yellow	Yellow	Yellow	Green	Red	Yellow
Program #10	Yellow	Green	Green	Yellow	Yellow	Yellow	Yellow	Green	Red	Yellow
Program #11	Yellow	Green	Green	Yellow	Yellow	Yellow	Yellow	Green	Red	Yellow
Program #12	Yellow	Green	Green	Yellow	Yellow	Yellow	Yellow	Green	Red	Yellow
Program #13	Green	Green	Green	Yellow	Yellow	Yellow	Green	Green	Red	Green
Program #14	Yellow	Green	Green	Green	Yellow	Yellow	Yellow	Green	Red	Yellow
Program #15	Yellow	Green	Green	Green	Yellow	Yellow	Yellow	Green	Red	Yellow
Program #16	Yellow	Green	Green	Green	Yellow	Yellow	Yellow	Green	Red	Yellow
Program #17	Yellow	Green	Green	Red	Red	Yellow	Yellow	Green	Red	Red
Program #18	Red	Yellow	Green	Yellow	Yellow	Yellow	Green	Green	Red	Red
Center Average	Yellow	Green	Green	Yellow	Yellow	Yellow	Green	Green	Red	Red

Portfolio Criteria

- 95% Programs Green
- 75%-95% Programs Green, <10% Programs Red
- <75% Programs Green or >10% Programs Red

Lessons Learned

- **Personnel Resources are Stretched and Need SE Training & Experience**
- **Process and Procedures are Needed to Ensure More Repeatable/Consistent Application of SE**
- **Product Line Specific Guidebook Capturing Eglin Experience in Weapons Desired**

The Good

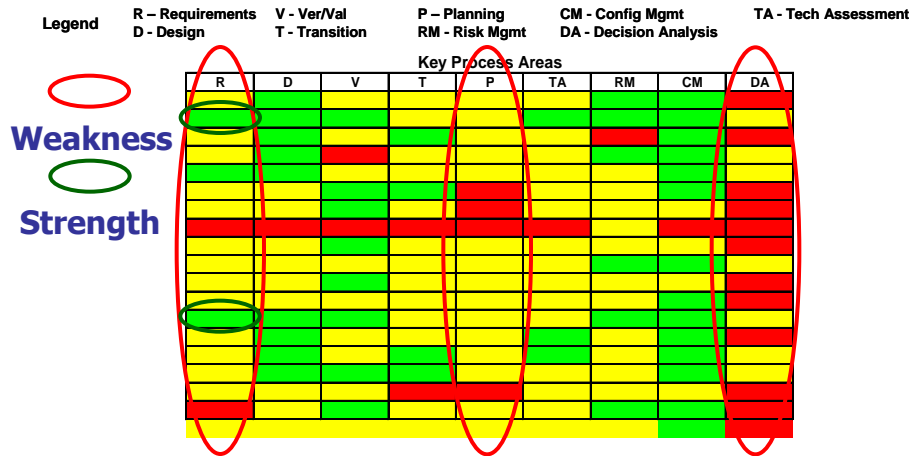

- **Requirements Control & Verification Working Group**
- **Iterative Requirements & Design Trade-off Working Group**
- **Concurrent Engineering to Ensure Successful Transition to Production**
- **Contract Incentives for Reducing Cost and Increasing Reliability**
- **Full Trust Integrated Teaming**
- **Integrated & Overarching Risk Management Strategy**

“Following MIL-STDs was Better than Having No Process at All”

The Bad

Decision Analysis	RED
Planning	YELLOW
Requirements	
Risk Management	
Verification & Validation	
Transition	
Technical Assessment	
Design	
Configuration Management	GREEN

Better ↓

- Areas that Need Work
 - Requirements
 - Decision Analysis
 - Planning
 - Process Integration Particularly Risk Management
- Model Expansion Needed
 - Manufacturing (Transition to Production)
 - Sustainment

Added in Version 2.0

Requirements Weaknesses

- **Design Mission Reference Profiles (RG1P2)**
 - **Comprehensive Definition of Product Characteristics in Engineering Terms and Documentation of the Interaction of the Product with the Environment, Other Systems, and Operational Users [Willoughby].**

Do we understand the edges of the technical performance envelope?

- **Validate Requirements (RG2P3)**
 - **Ensure the Evolving Product will Perform as Intended in the Operational Environment [CMMI].**

Do the derived requirements accurately and completely represent what is needed? and no more... How were they validated?

Reference: AAC SEAM v2.4

Some Solutions

- **Develop Valid Mission Reference Profiles to Support Design**
 - **Validate** Concepts of Employment
 - Obtain **Accredited** Simulation Capability Including Carriage, Separation, Fly-out
 - Engage Independent Subject Matter Experts
 - Discover & Examine Stressing Conditions
 - **Anchor** the Models with Data
 - Test Prototypes in Wind Tunnel
 - Test Instrumented Flight Vehicles in Carriage, Separation and Fly-out Modes
- **Test** Sample Conditions of All Configurations With Representative Hardware Early and Allow Schedule for Issue Resolution

**Evaluate All
Load-Out
Conditions**

Vibration

Acoustics

Temperature

Electromagnetic

Aerodynamic

Sustainment Weaknesses

- **Establish Operational, Suitability and Effectiveness Baselines (SG4P1)**
 - **Conduct Health Monitoring and Verification to Ensure Fielded Product Matches Baseline Performance [AFMCI]**

How do we assure the products continued safety & performance?

- **Perform Audits to Maintain Integrity (CMG3P2)**
 - **Ensure Processes for Maintaining the Integrity of the Fielded Configuration are Effective [CMMI].**

How do you know if Time Critical Technical Orders are compete?

Reference: AAC SEAM v2.4

AF-SEAM Background

- **In 2006, USAF Material Command Engineering Council Action Item to:**
 - **Provide an USAF-wide SE Assessment Model**
 - **Involve USAF Centers (product and logistics)**
 - **Leverage current CMMI®-based models in use at AF Centers**
 - **Baseline Process Capability & Usage**
- **AF Systems Engineering Assessment Model:**
 - **A single AF-wide tool which can be used for the assessment and improvement of systems engineering processes in a program/project.**

Version 1.0 Completed August 2008

Generic Practice Assessment Results XXX Center

Future Concept

Key Process Area: Manufacturing or TMC

Goal: – Product and process quality is assessed and improved.

Practice:

Notional

P1 Establish and maintain a quality management system.

-  5: *The developer and major suppliers have an ISO 9000/AS9100 certified operation with recent AS9101 audit at relevant locations.*
-  4: *The developer has an ISO 9000/AS9100 certified operation with recent AS9101 audit at relevant locations.*
-  3: *The developer is meeting the intent of ISO 9000/AS9100 with a recent independent quality audit at relevant locations.*
-  2: *The developer has an effective quality management system that includes suppliers with no recent independent audit.*
-  1: *The developer has not demonstrated an effective quality management system.*

Rungs Facilitate 1) Self Assessment, 2) Training and 3) Steps for Improvement

Summary

- **Goal is to Continue to Improve Program Performance**
 - Too Many Examples of Program Performance/ Issues Being Tracked Back to Lack of Systems Engineering Discipline
- **Long Term Goal – Revitalizing Systems Engineering**
 - Need to Follow “Best Practices”
 - Need to Do them “Well”
 - Need to Ensure that Our Program Teams Have What they Need
 - Qualified People, Process Discipline, Tools/Technology

1. What to do?

2. How to do it?

3. How to Sustain it?

Where there is no standard there can be no Kaizen

– Taiichi Ohno

改善

Kai-zen

The Art of Continuous Improvement

*Kai-zen must operate with three principles in place:
process and results, systemic thinking, and non-blaming
(because blaming is wasteful).*
