

# **Developing a Mission Solution: From Mission Gap Analysis to Preferred System Concept**

Liz O'Keefe

Jim Sierchio

26 October 2010

# Outline

---

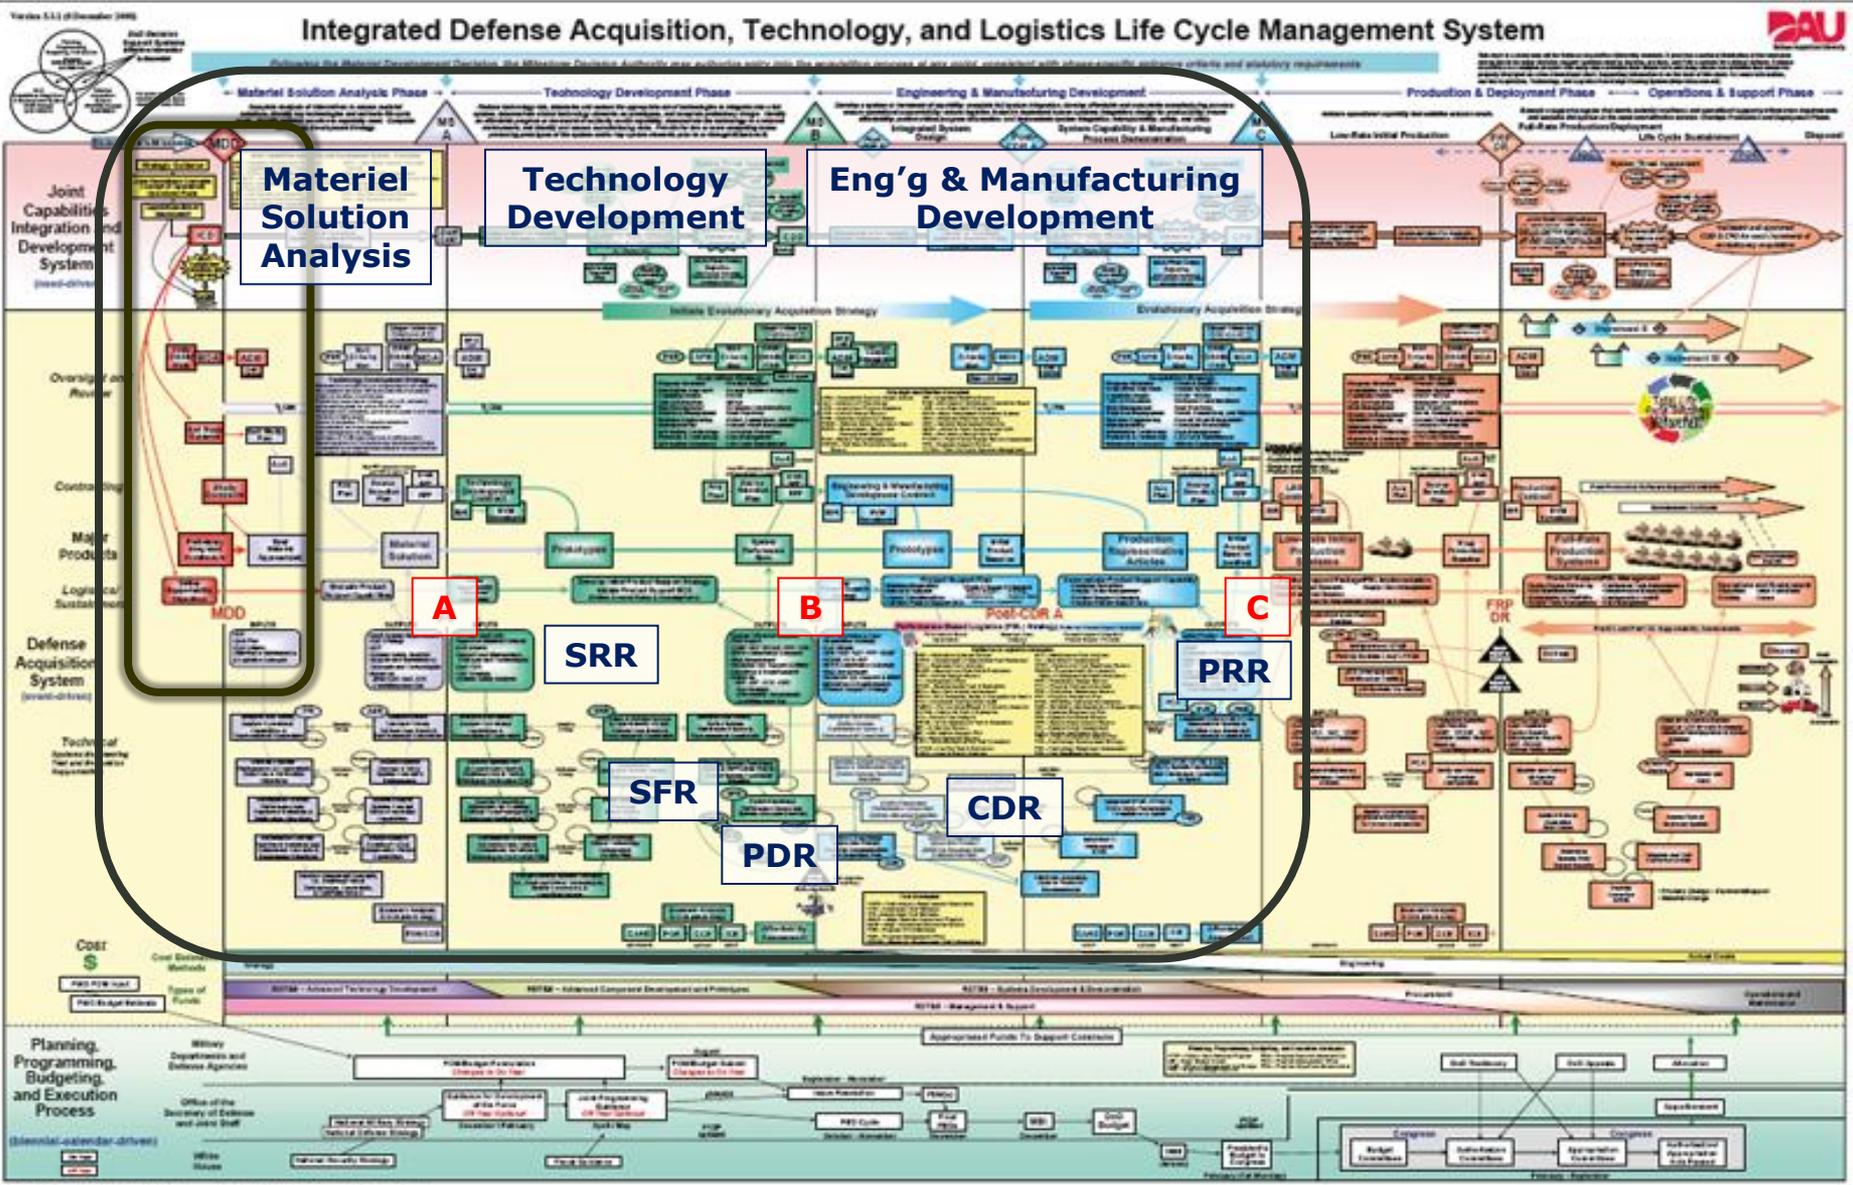

- Introduction
- Development in the Acquisition Cycle
- Affordable Weapon System Study (AWS)
- Implementing JCIDS at RMS
- Mission Capability Analysis
- Solution Capability Analysis
- First Principles Analysis
- Quality Functional Deployment / Preferred System Concept
- Summary

# Introduction

---

- Mission analysis studies conducted per the Joint Capabilities Integration & Development System (JCIDS) process identified gaps in the Navy's ability to provide accurate, responsive "Fire Support from the Sea"
  - Marine and Army forces operating ashore throughout conflict spectrum
  - Gaps defined in the Marines' Joint Fires Initial Capabilities Document (ICD)
  - Included impact from use of MV-22 Osprey, which provides Marines ability to conduct vertical envelopment ops far beyond naval gunfire range
- Navy interested in developing a refined system concept for an Affordable Weapon System (AWS) as a ship- and/or air-launched material solution " for the 2016 timeframe
- AWS Team employed RMS Mission System Engineering (MSE) Process
  - Mission Capability Analysis (MCA) used to identify relevant Mission Areas and Missions, and then determine the 2016 timeframe capability shortfalls
  - Solution Capability Analysis (SCA) used to identify, rank and rate solution options, and map options against defense strategies and mission shortfalls.

# Development in the Acquisition Cycle: JCIDS and DoDI 5000.02

# Affordable Weapon System Study: Mission Capability Analysis Process

One aspect of the AWS study was to determine the capabilities and associated tasks, conditions and standards required for Naval Surface Fire Support (NSFS) missions performed at standoff ranges.

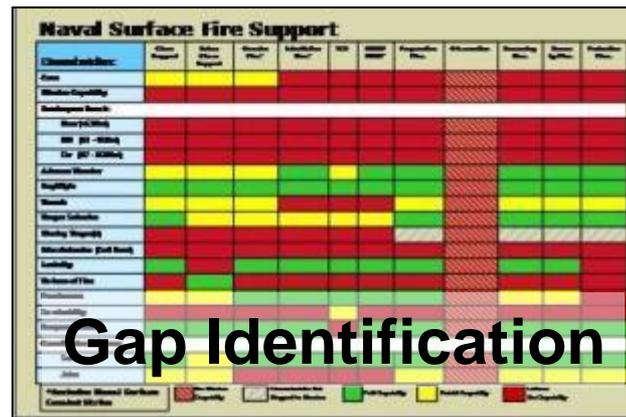

### MCA Identifies:

- Appropriate Mission Areas and Missions
- Scope of Mission Area / Military Problem
- 2016 timeframe capability shortfalls

### MCA Maps:

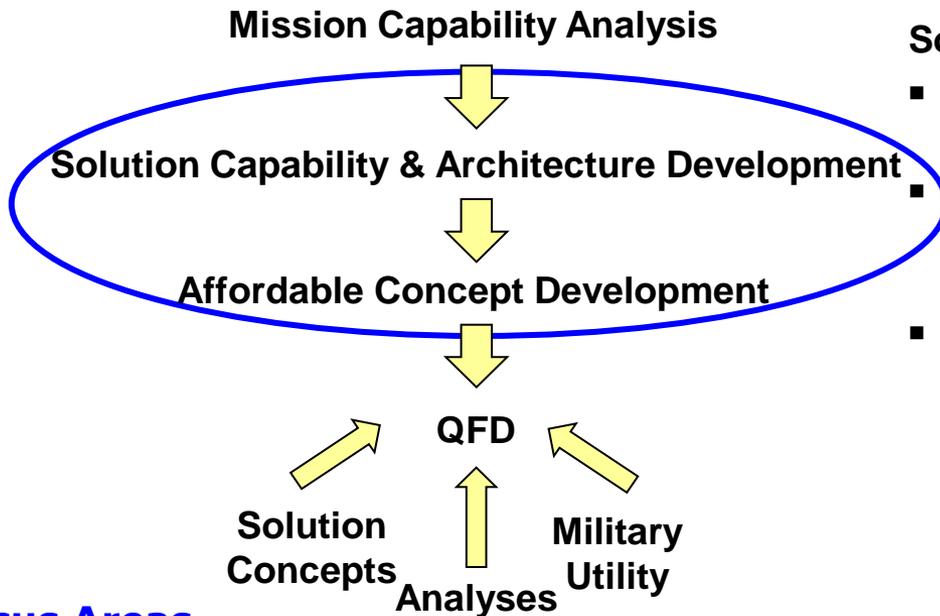

- Capabilities to Defense Strategies
- Relevant objectives to capability gaps
- Example Scenarios to mission areas

**Focus on Identifying the Gaps**

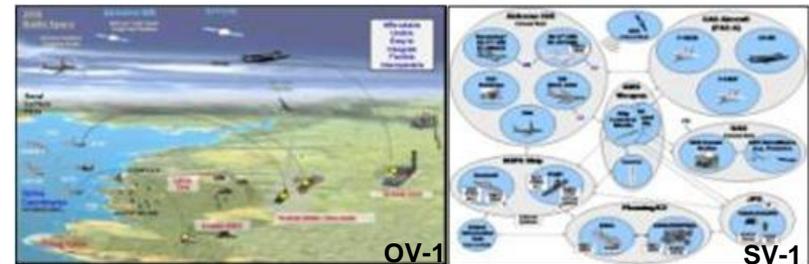

# Affordable Weapon System Study: Solution Architecture & Design Development

- MOEs → System Capabilities → System Requirements
- Use of Existing Navy Surface Fires Infrastructure
- Detailed Architecture Definition beyond M/S A levels
  - DoDAF AV-1, AV-2, OV-1 thru OV-7 SV-1 thru SV-9)

**Solution Architecture includes:**

- Operational Architecture
  - Kill Chain & Operational Model
- System Architecture & Solution Capabilities
  - Networks, Data Links, Systems, Functions, Interfaces, Function to Activity Mapping
- Weapon System (WCS & Missile)
  - Functionality, Timelines, End Game

**Focus Areas**

Architecture Flexibility wrt Preferred System Concept

System of Systems Interoperability & Functionality

Priority on Affordable & Useful → Achievable SoS Design → Exceptional Value to the Warfighter

**Focus on Development of Solution Architecture & Concepts**

# Affordable Weapon System (AWS) Operational Concept OV-1

Methods

- Doctrinal Research
- Warfighter Subject Matter Experts (SME)
- Mission/Operational Architecture
- First Principle Analysis (FPA)
- Constructive Analysis

- Constructive Analysis
- System Architecture
- Man-in-the-Loop Simulations
- SW/HW-in-the-Loop Simulations

Analysis of mission areas and mission current and future capabilities

Analysis of solution space & capability gaps filled by candidate solutions

# Implementing JCIDS at RMS: MSE Components

## Mission Capabilities Analysis (MCA)

Analysis of mission areas and mission current and future capabilities

- Identifies
  - Mission Areas and Missions
  - Scope Problem
  - Relevant Timeframe
  - Capability Gaps
- Maps
  - Capabilities to Defense Strategies
  - Relevant Objectives to Capability Gaps
  - Example Scenarios to Mission Areas
- Includes
  - Mission Analysis
  - Capability Analysis
  - Gap Analysis

## Solution Capability Analysis (SCA)

Analysis of solution space and capability gaps filled by candidate solutions

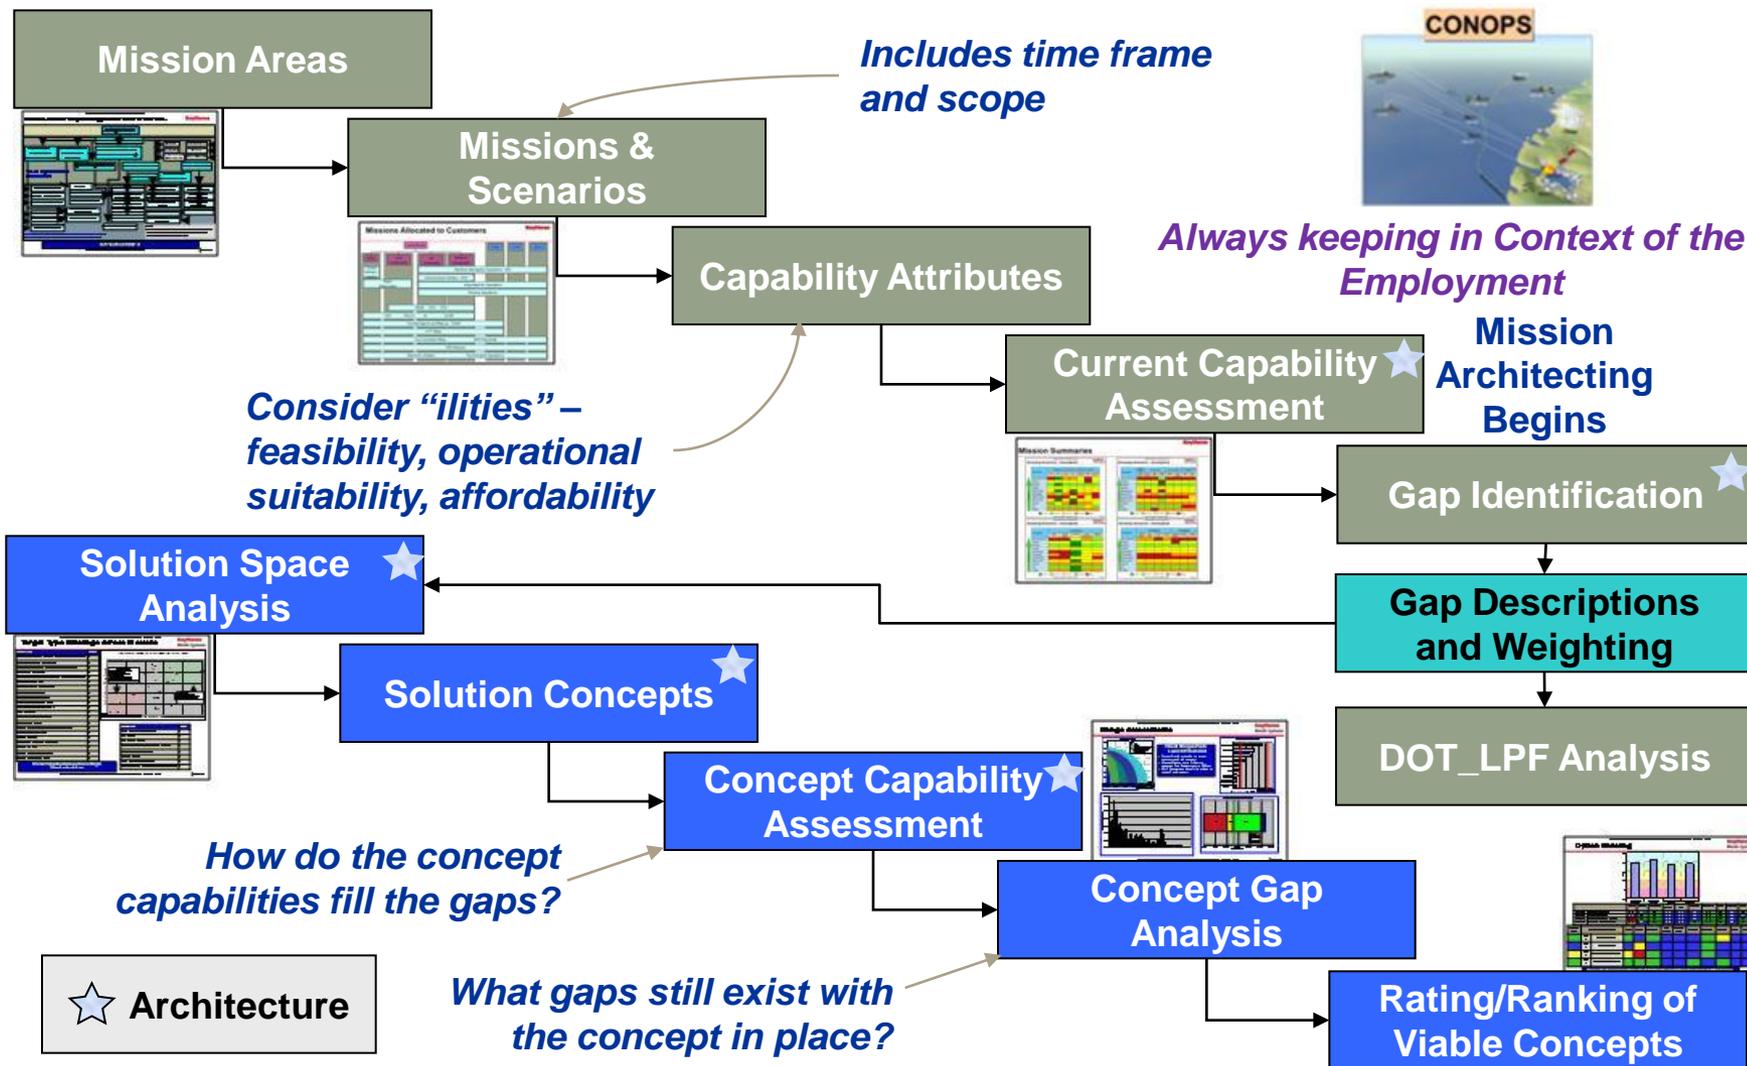

- Identifies
  - Solutions Ranked & Rated
  - Engagement Cost
- Maps
  - Options to Strategies
  - Solutions to Capability Gaps
  - Capability Gaps to Filled Gaps
  - Mission Weakness to Areas Fulfilled
- Includes
  - Tailored Analysis

# Implementing JCIDS at RMS: Mission to Solution Relationship

MISSION CAPABILITIES ANALYSIS (MCA)

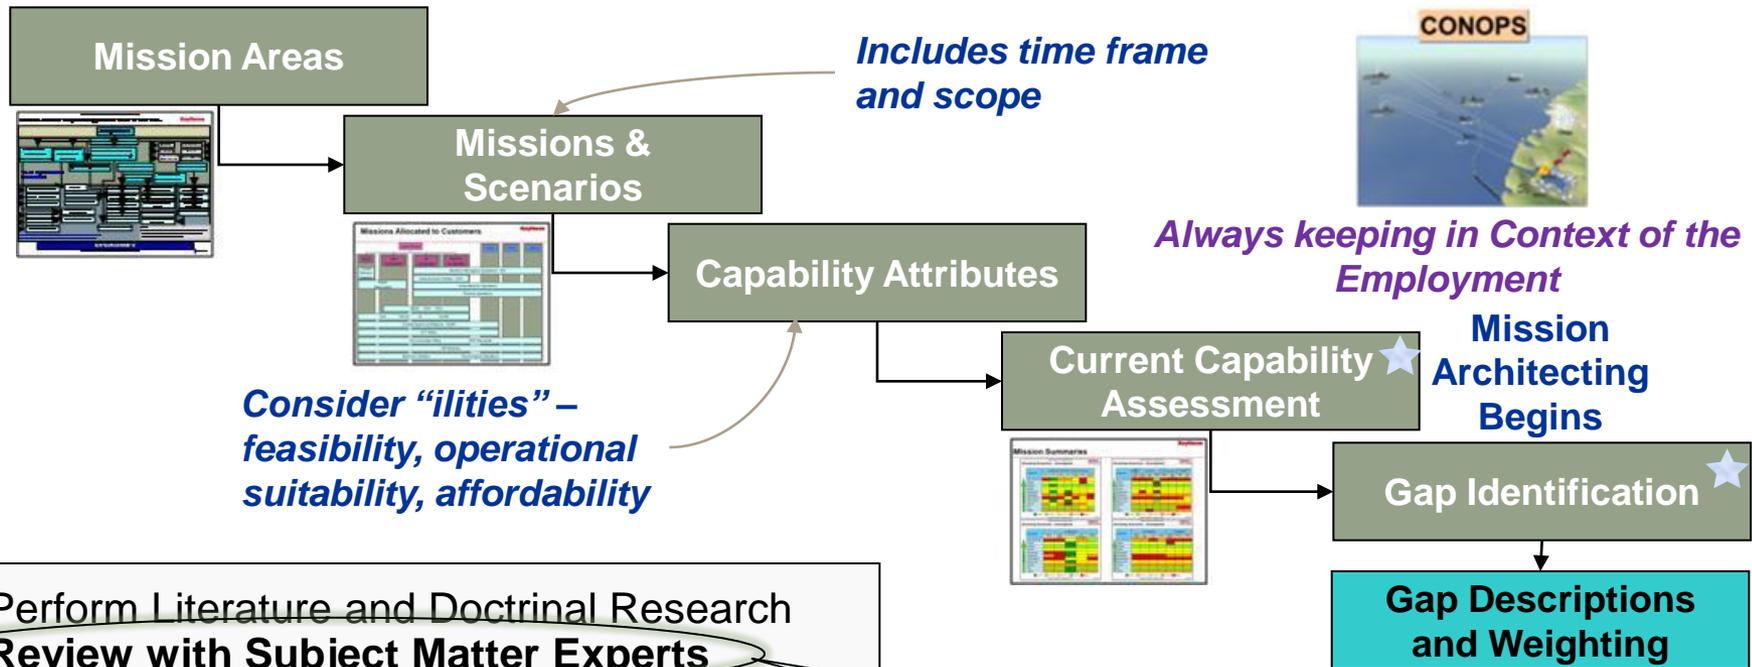

SOLUTION CAPABILITY ANALYSIS (SCA)

MSE is tailored to project status and growth needs

# MCA Approach

MISSION CAPABILITIES ANALYSIS (MCA)

Consider "ilities" – feasibility, operational suitability, affordability

Includes time frame and scope

Always keeping in Context of the Employment

Mission Architecting Begins

- Perform Literature and Doctrinal Research
- **Review with Subject Matter Experts**
- Conduct Mission Analysis
- Summarize Findings
- Identify Capability Gaps
- Identify AWS Concept Trade Space

**Review's Purpose:**

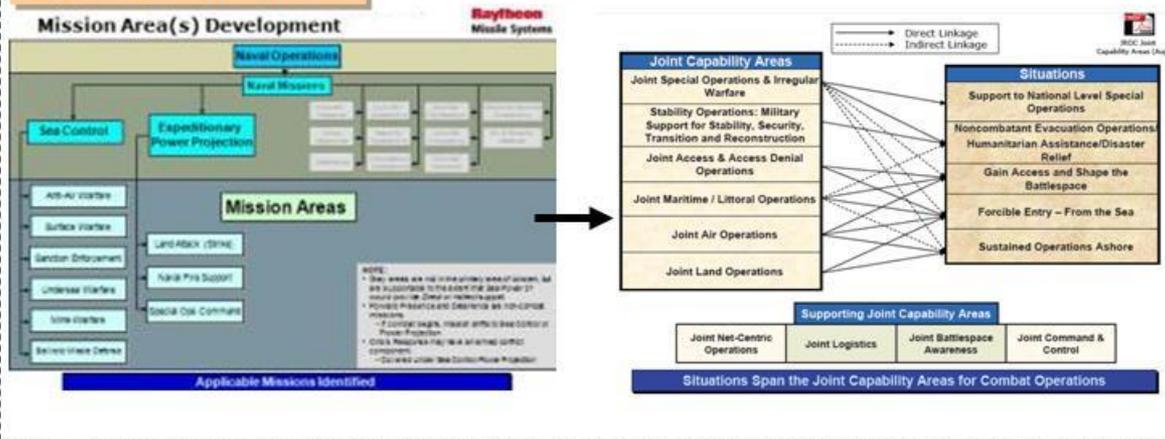

- Capture mission breakdown for Naval Strike and Fire Support from Warfighter perspective.
- Focus on Mission Operations, Capabilities, and Mission Execution Cost
- Utilize Warfighter Subject Matter Experts with broad spectrum of user perspectives. Subject

★ Architecture

**Subject Matter Experts Provide Key Input for Analysis**

# MCA Example

## Missions Identified

## Reference Scenarios Identified and Used to Assess Missions

**Scenario Summary**

Scenario	Mission	Weapon	ASD Role & Target
1. Support to SOP to Security of US	Respond to National Level Special Operations	Supporting Fires for USOP and The Long War Operations	Use ASD to provide ASD support to a capability supporting USOP in a commercial scenario, combined with planned T&AD area of liability
2. Conduct HED of Reservoir under Rebel Attack	HED / Humanitarian Assistance / Disaster Relief	Close Supporting Fires for Non-Combatant Evacuation Operations	Use ASD to provide ASD support to provide close supporting fires against rebel army in a stable situation of the HED complex coordinated with other Navy Gun Firing
3. Respond to Enemy Ambush of Insurgent and Control Carrying Rebel Supplies	HED / Humanitarian Assistance / Disaster Relief	Close Supporting Fires for Non-Combatant Evacuation Operations	Use ASD to provide ASD support to provide close supporting fires against rebel army in a stable situation of the HED complex coordinated with other Navy Gun Firing
4. Provide Identification Area from Landing Force	Gain Access and Shape the Battlespace	Key Information from Aerial Reconnaissance Operations	Use ASD to provide ASD support to provide close supporting fires against rebel army in a stable situation of the HED complex coordinated with other Navy Gun Firing
5. USOP or T&AD Request for Interdiction from Air	Gain Access and Shape the Battlespace	Key Information from Aerial Reconnaissance Operations	Use ASD to provide ASD support to provide close supporting fires against rebel army in a stable situation of the HED complex coordinated with other Navy Gun Firing
6. USOP or T&AD Request for Interdiction from Air	Gain Access and Shape the Battlespace	Key Information from Aerial Reconnaissance Operations	Use ASD to provide ASD support to provide close supporting fires against rebel army in a stable situation of the HED complex coordinated with other Navy Gun Firing
7. USOP or T&AD Request for Interdiction from Air	Gain Access and Shape the Battlespace	Key Information from Aerial Reconnaissance Operations	Use ASD to provide ASD support to provide close supporting fires against rebel army in a stable situation of the HED complex coordinated with other Navy Gun Firing
8. USOP or T&AD Request for Interdiction from Air	Gain Access and Shape the Battlespace	Key Information from Aerial Reconnaissance Operations	Use ASD to provide ASD support to provide close supporting fires against rebel army in a stable situation of the HED complex coordinated with other Navy Gun Firing
9. USOP or T&AD Request for Interdiction from Air	Gain Access and Shape the Battlespace	Key Information from Aerial Reconnaissance Operations	Use ASD to provide ASD support to provide close supporting fires against rebel army in a stable situation of the HED complex coordinated with other Navy Gun Firing
10. USOP or T&AD Request for Interdiction from Air	Gain Access and Shape the Battlespace	Key Information from Aerial Reconnaissance Operations	Use ASD to provide ASD support to provide close supporting fires against rebel army in a stable situation of the HED complex coordinated with other Navy Gun Firing

**Scenarios Enable Analysis and Evaluation in Realistic Situations**

## Assessed Capabilities Using Reference Scenarios

**Naval Surface Fire Support**

**Close Support Fires**

Characteristics	Rating	Driving Factors	Sample Scenarios
Weapon	High	Weapon Capability	Scenario 1: Close Support Fires
Target	High	Target Capability	Scenario 2: Close Support Fires
Weather	High	Weather Capability	Scenario 3: Close Support Fires
Visibility	High	Visibility Capability	Scenario 4: Close Support Fires
Clouds	High	Clouds Capability	Scenario 5: Close Support Fires
Temperature	High	Temperature Capability	Scenario 6: Close Support Fires
Humidity	High	Humidity Capability	Scenario 7: Close Support Fires
Wind	High	Wind Capability	Scenario 8: Close Support Fires
Pressure	High	Pressure Capability	Scenario 9: Close Support Fires
Altitude	High	Altitude Capability	Scenario 10: Close Support Fires
Distance	High	Distance Capability	Scenario 11: Close Support Fires
Time	High	Time Capability	Scenario 12: Close Support Fires

## Identified Gaps

## Gap Analysis Report

**Mission Gaps**

Mission	Characteristic Gaps (Red)	Characteristic Gaps (Yellow)
ASD	Weather, Visibility, Targeting, Accuracy, Range, Altitude	Weapon, Targeting, Accuracy, Range, Altitude
Close Fires	Weather, Visibility, Targeting, Accuracy, Range, Altitude	Weapon, Targeting, Accuracy, Range, Altitude
Section Report	Weather, Visibility, Targeting, Accuracy, Range, Altitude	Weapon, Targeting, Accuracy, Range, Altitude
Identification	Weather, Visibility, Targeting, Accuracy, Range, Altitude	Weapon, Targeting, Accuracy, Range, Altitude
T&AD	Weather, Visibility, Targeting, Accuracy, Range, Altitude	Weapon, Targeting, Accuracy, Range, Altitude
DEAD SEA	Weather, Visibility, Targeting, Accuracy, Range, Altitude	Weapon, Targeting, Accuracy, Range, Altitude
Recon by Fire	Weather, Visibility, Targeting, Accuracy, Range, Altitude	Weapon, Targeting, Accuracy, Range, Altitude
Preparation Fire	Weather, Visibility, Targeting, Accuracy, Range, Altitude	Weapon, Targeting, Accuracy, Range, Altitude
Assessing Fire	Weather, Visibility, Targeting, Accuracy, Range, Altitude	Weapon, Targeting, Accuracy, Range, Altitude
Precedence Fire	Weather, Visibility, Targeting, Accuracy, Range, Altitude	Weapon, Targeting, Accuracy, Range, Altitude
Sub Close Support	Weather, Visibility, Targeting, Accuracy, Range, Altitude	Weapon, Targeting, Accuracy, Range, Altitude
Observation	Weather, Visibility, Targeting, Accuracy, Range, Altitude	Weapon, Targeting, Accuracy, Range, Altitude

**Mission Characteristics Gaps**

Based on the number of Missions with Red scores (2 or more) in the capability assessment

Gap	Comments
Targeting	Surface Counter Fires is weak in targeting
Target Selection Assurance	Primarily affecting Aviation
Communications	Across All Mission Areas
Coordination	Submarine and Surface Fire engagements
Moving Target Engagement	Across All Mission Areas
Adverse Weather	Large impact on Naval Aviation Missions
Discrimination	Primarily affecting Aviation
Collateral Damage	Primarily affecting Aviation CAS and T&AD Critical Data
Agility	Across Surface, Submarine and Aviation
Terrain	Primarily Urban (MOUT)
Volume of Fires	Particularly for Surface and Submarine Fires
Range (Far)	Surface Fires weakness
Cost	Across all Mission Areas

**Gaps Identified with Driving Mission Areas**

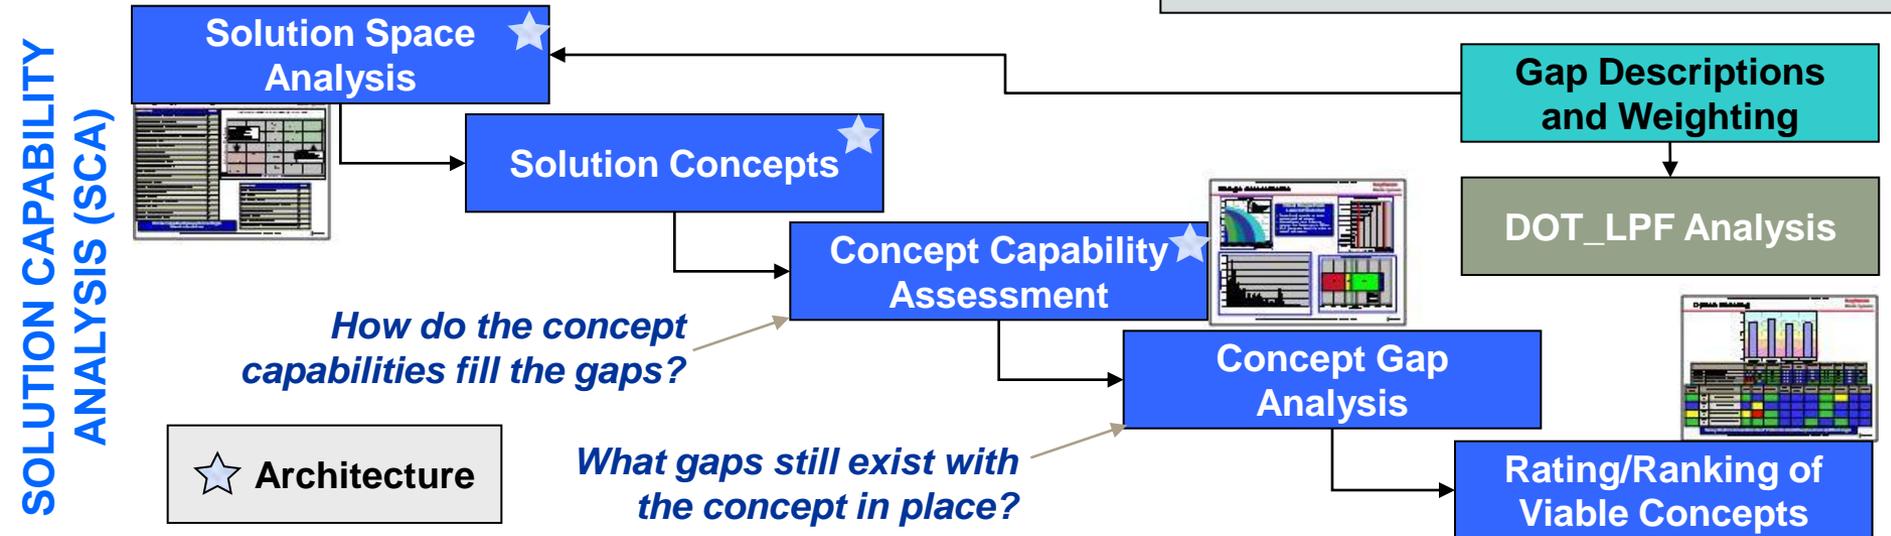

Mission and Mission Characteristics Gaps drive System Level Concept Development and Analysis

# SCA Approach

- Rank Options
- Rate Options vs Gaps uncovered in MCA
- Cost Engagements
- Map Options, Capability Gaps and Mission Areas**
- Includes tailored analysis to cover Identified Gaps

**Mapping Purpose:**

- Options: determine extent to which Options are in line with Defense Strategies
- Capability Gaps: determine which Capability Gaps are fulfilled by other systems
- Mission Areas: determine extent to which Mission Area weaknesses are fulfilled

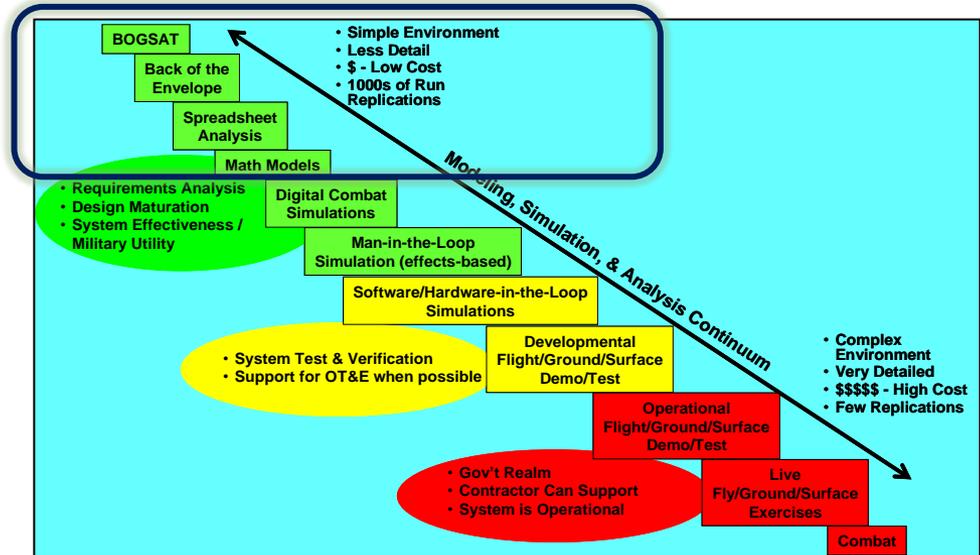

# First Principle Analysis

- **Purpose**
  - Support decision making
  - Begin design space bounding
  - Begin analysis plan development
- **Based on Top Level Understanding**
  - Operating Concepts
  - System Components
  - Interactions
- **What is it used for?**
  - Quick response and understanding at early stages of system development
  - Qualitative input to early business decision points
  - Sanity check comparison with higher order models
  - Design space development
  - Military utility analysis
  - Requirements development, balancing, influence
  - Op Con Validation
- **What it is not**
  - High Fidelity Level Models
  - Detailed Analysis
  - The Final Answer

## • How is it done?

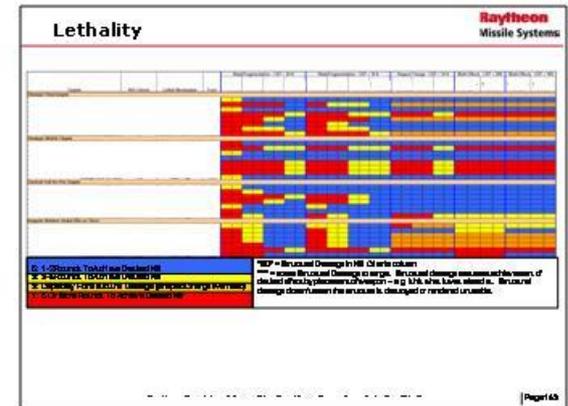

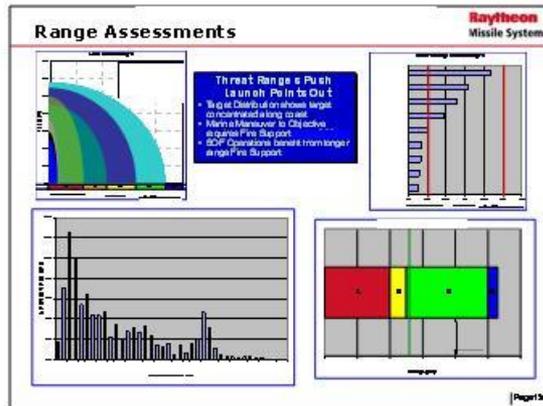

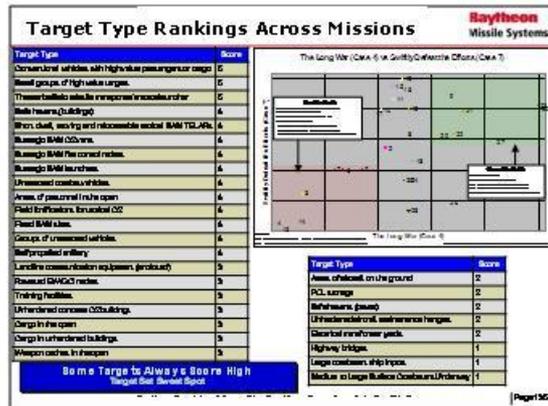

- Understand the problem/question and level of fidelity
- Identify components
- Describe the interactions/effects in a computationally efficient manner
  - Mathematically
  - Model the system
- Design experiments
- Conduct experiments
- Analyze results
- Iterate

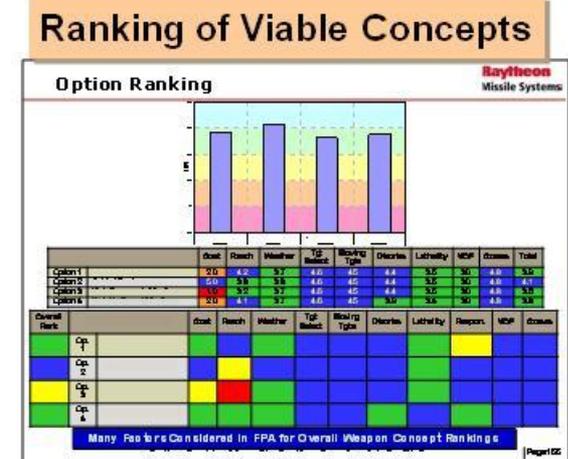

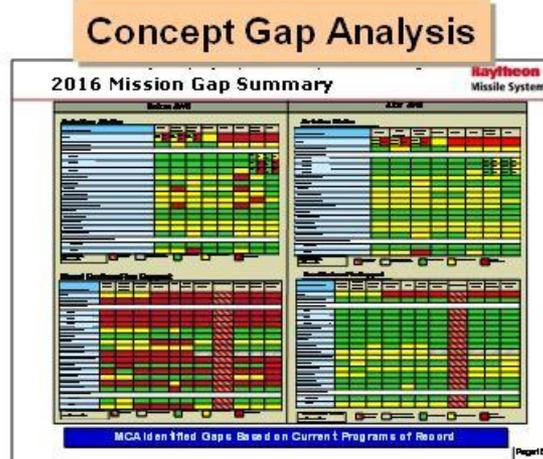

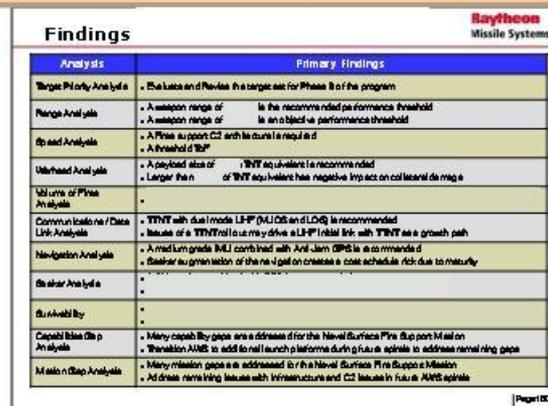

**Just Enough Fidelity to Provide Early Insight**

# SCA Example

## Solution Space Identified

## Concept Capability Assessment

The Solution Concepts are Assessed for Ability to Fill Capability Gaps

# Quality Function Deployment / Preferred System Concept Methodology

## Step 1 Airframe Options

### Criteria

Affordability

Gap Coverage

FPA

Interoperability Complexity

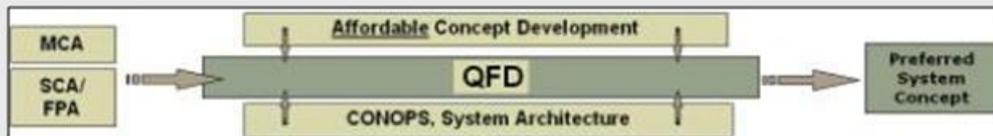

Risk

Criteria	Options
Affordability	
Gap Coverage	
FPA	
Interoperability Complexity	
Risk	

CRITERIA	WEIGHT
Highest Importance	5
Medium -High	4
Medium Importance	3
Medium -Low Importance	2
Low Importance	1

CATEGORY	DEFINITION	WEIGHT
Cost	Flyaway, NRE, or TOC cost relationship	20%
Gap Coverage	Ability to close an MCA Gap	15%
Operational Effectiveness	Effect on the defined target set or scenario	10%
System Impacts	Impact to the Infrastructure	10%
Weapon Performance	Key elements of the weapon performance	10%
Risk	Riskiness of development & manufacture	10%
Programmatic	Impact to the total SDD effort	10%
Strategic	Strategic position provided to all parties	15%

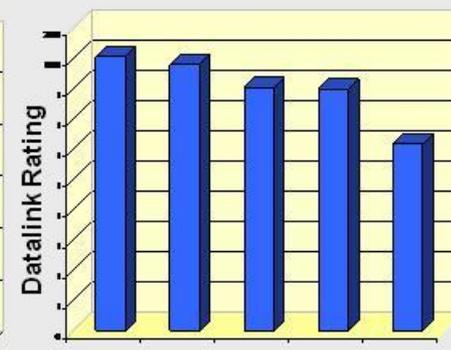

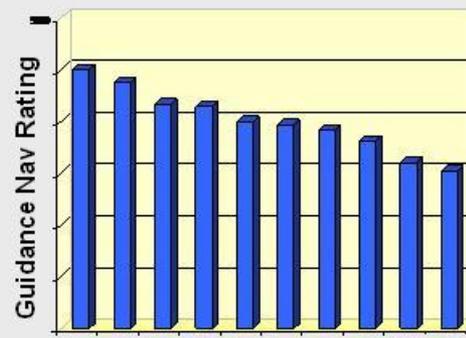

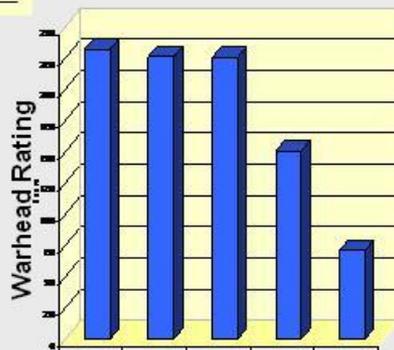

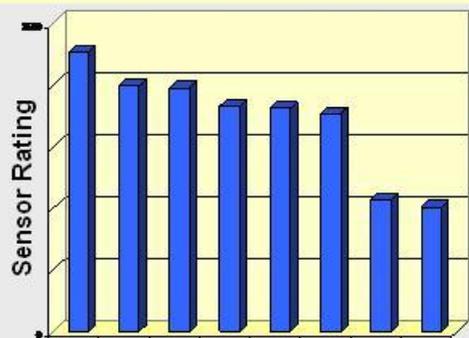

QFD SCORING	SCORE
A strong fulfilling relationship between the criteria and the Solution Approach	9
A moderate fulfilling relationship between the criteria and the Solution Approach	3
A weak fulfilling relationship between the criteria and the Solution Approach	1
No relationship between the criteria and the Solution Approach	0

### QFD Step 1 Results

## Step 2 Subsystem Options

Option Preferred Due to Ability to Affordably Fill Mission Characteristic Gaps

# Summary

- Raytheon uses Mission Analysis to Focus Selection of the Preferred System Concept on the Ability to Cover Gaps
  - Mission Capability Analysis
  - Solution Capability Analysis
- Mission Capability Analysis identifies Missions, Mission Gaps and Mission Characteristic Gaps
- Solution Capability Analysis bounds the Solution Space and assesses the Solutions Concepts for ability to fill the Capability Gap
- Results of the Affordable Weapon System Mission Analyses were key input to the QFD study and selection of the AWS Preferred System Concept – Airframe and Subsystems

**Mission Analysis Enables Raytheon to Work Solutions Focused on Warfighter Need**

# Biographies

- **Elizabeth M. (Liz) O’Keefe** is a Senior Principal Systems Engineer and Certified Architect at Raytheon Missile Systems, and has been with Raytheon and its legacy companies for 29 years. She has a BS degree from Clarkson University in Electrical Engineering (EE) - Communications and a MS degree in EE - Systems from California State University at Fullerton. Liz has worked in Radar Analysis, Systems Integration, Simulation, Engineering Processes, and Strategic Planning. She was Systems IPT lead for SM-3 Block I and then Chief Architect and Chief Engineer for SM-3 Strategic Architecture & Analysis (SA&A) and related Navy BMD programs, as well as Program Manager for the SM-3 SA&A and Low Cost Kill Vehicle programs. Liz was recently Chief Architect for the Affordable Weapon System and Net-Ready Key Performance Parameter Architecture Evaluator (NetRAE) Tool programs.
- **James G. (Jim) Sierchio** is a Senior Principal Systems Engineer and Certified Architect at Raytheon Missile Systems. He has been with Raytheon for 11 years, developing mission architectures and CONOPS for such BMD-related programs as Exo-Atmospheric Kill Vehicle, Multiple Kill Vehicle, and Sea-Based Terminal, the latter as Chief Architect. Jim is a retired Air Force Lieutenant Colonel, with a career spent in directed energy, space systems and BMD R&D, and technical intelligence. Jim has a BSE degree from Princeton University in Aerospace & Mechanical Sciences, a MS degree in Aerospace Engineering from the University of Dayton, an Engineer degree in Aeronautics & Astronautics from New York University, a MBA degree from Averett University, and a DBA from California Coast University.
