

The Future of CMMI®

Industry Panel

CMMI Technology Conference and User Group
November 15, 2011

® CMMI is a registered trademark of Carnegie Mellon University

Introduction:

- How well does CMMI meet the needs of your organizations, and the marketplace in general?
- What works? What doesn't? Where does CMMI need to go to better fit the needs of organizations in the future?

Format:

- Panelist responses to topic statements
- Open discussion / Q&A

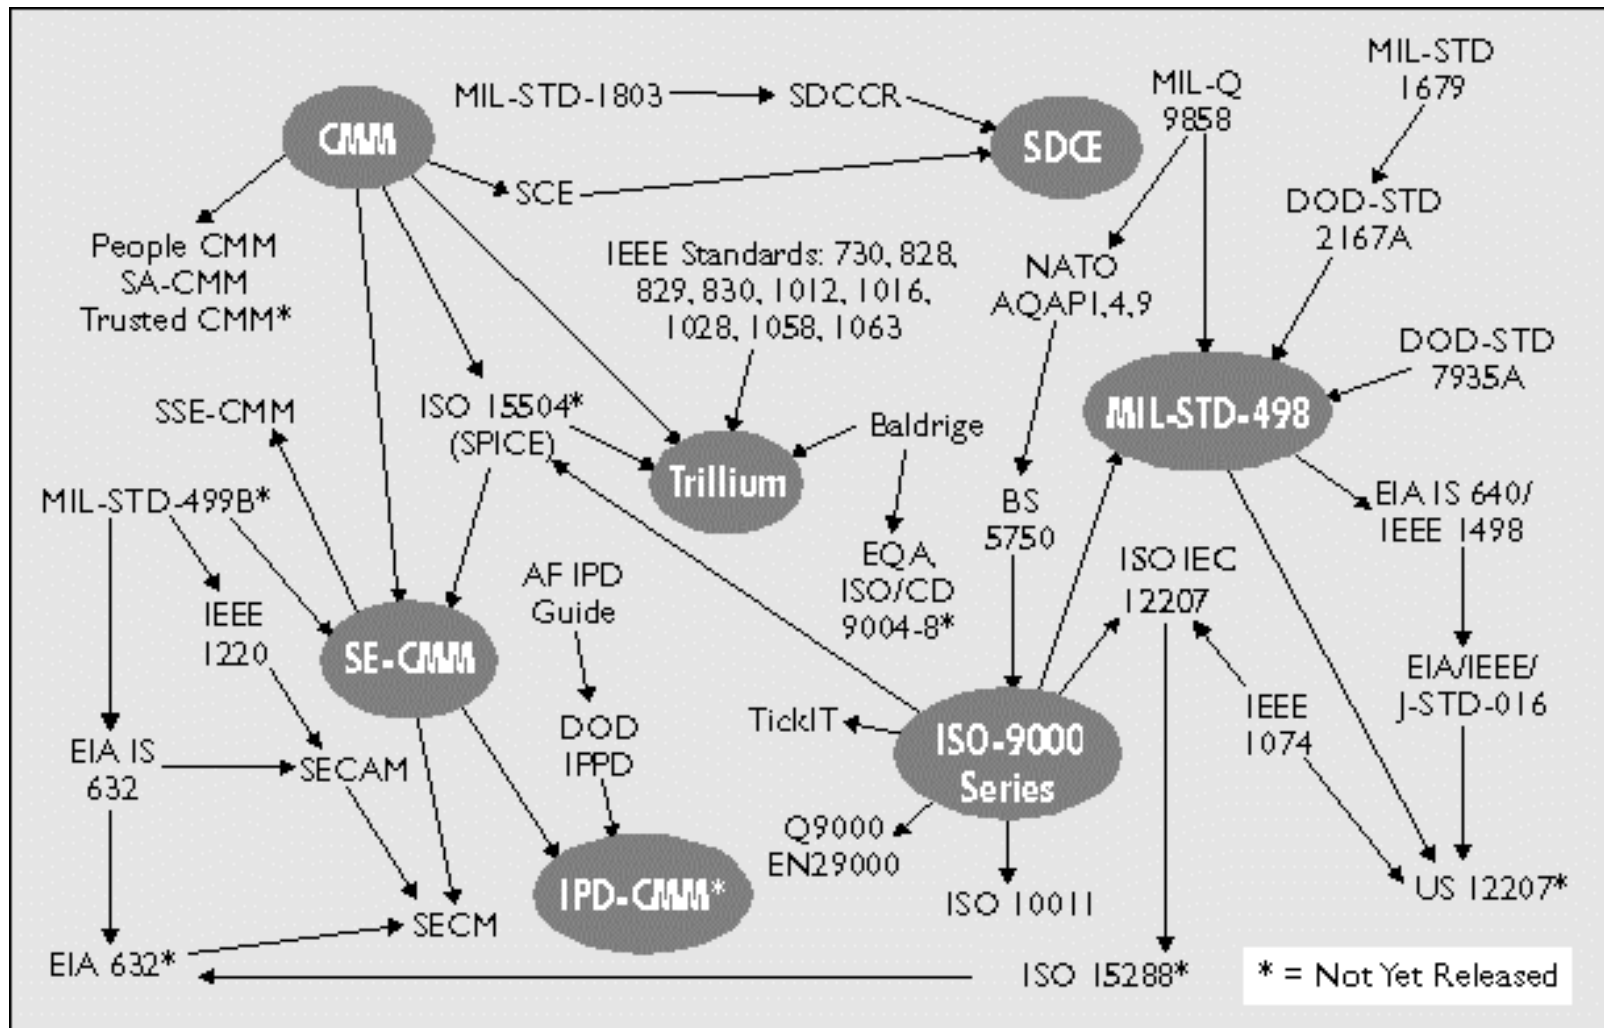

- **Mike Campo** (Raytheon Company)
- **Brian Gallagher** (Northrop Grumman)
- **Jim Gill** (The Boeing Company)
- **Lynn Penn** (Lockheed Martin)
- **Rusty Young** (Software Engineering Institute)

Brian P. Gallagher

Division Director

Cyber Intelligence Division

Northrop Grumman Information Systems

NGC

Capabilities at a Glance

- Weaponized Platforms
- Resilient Systems

- Weaponized Payloads
- Non-Kinetic Effects
- Secure Supply Chain
- Cyber Capability

- Training Programs
- Facility Staffing

- CND Operations (IC, DoD, Fed)
- Title 50 & Title 10 Operations
- Intelligence Fusion & Analysis
- NCC, Kinetic & Non-Kinetic C2
- Next Generation Networks

Aerospace Systems

Electronic Systems

Technical Services

Information Systems

Integrated Cyber Security Goals and Future Vision

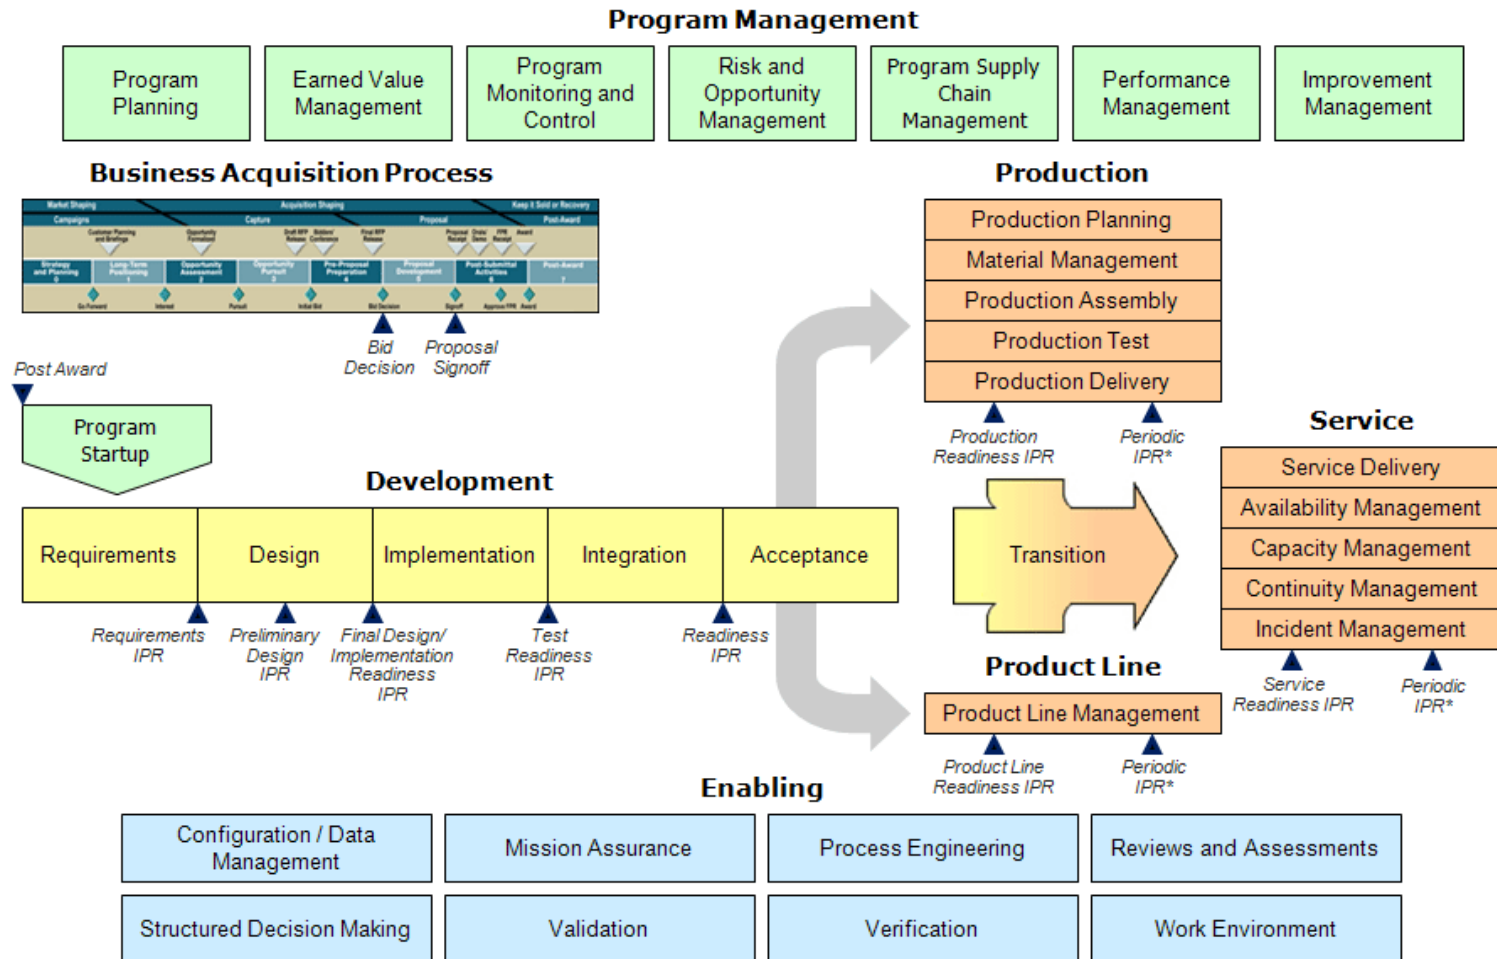

Corporate Cross Sector Initiatives

- Project Viceroy
- Project NKE

- Multi-Int, Multi-Sensor Mission Assurance
- Coordinated Non-Kinetic and Kinetic Mission Assurance

Committed to Addressing The Nation's Challenges

Standardization: The Program Execution Framework (PEF) Reference Model

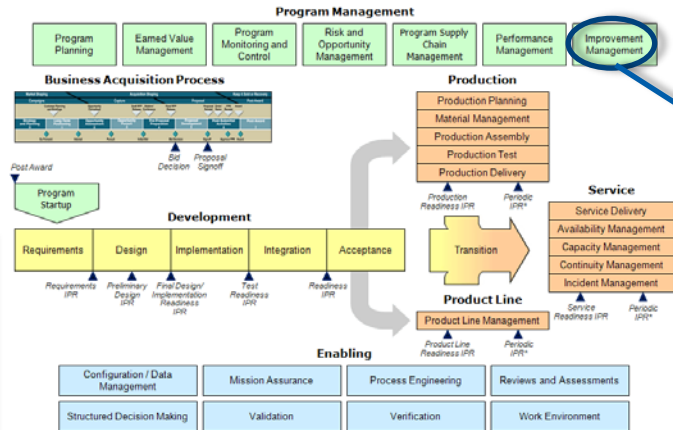

Reference model shows all activities for all program types

1. **Product Development.** Activities involved in the transformation of customer needs to delivered products or service systems required to deliver services.
2. **Product Maintenance.** Activities involved in the adaptive, corrective, improvement, enhancement and sustainment of delivered products
3. **Production / Manufacturing.** Activities to repetitively produce products with no or slight variations on an approved core design.
4. **Staff Augmentation.** Activities related to providing consulting expertise with process ownership of program management only; delivering hours only. Management of the activities is done by the customer.
5. **Professional Services.** Activities related to providing services as specified, including ownership of essential processes. Unique program management of the activities is done by NG.
6. **IT Managed Services.** Activities related to providing Information Technology infrastructure services to organizations.
7. **Operations.** Operations, routine maintenance, and / or support to accepted, deployed, operational systems.
8. **Product Line.** Activities to build a set of systems or products sharing a common, managed set of features that satisfy the specific needs of a particular market segment or mission and that are developed from a common set of core assets in a prescribed way.

NGIS Program Execution Framework (PEF)

NG PM Pro tool encapsulates:

- Program types
- Work products and success criteria
- Business rules to select applicable work product elements, success criteria, and gates

Reference Model defines:

- Core activities for Programs, Engineering, Mission Assurance
 - Review gates
- Each activity defined by:
- Policy (Command Media ISP)
 - Procedure (Command Media ISO)
 - Work products and success criteria

For each activity, T3G defines:

- Templates
- Tools
- Training
- Guidance

The screenshot shows the NG PM Pro tool interface. It includes fields for Program Acronym, Sales Number, Sector, Division, Business Unit, Operating Unit, Approver - MA, Approver - PRA, Program Manager, and Data Manager. There are also fields for Start Date and End Date. The **Counts** section shows Work Products: 174 + 0 = 174. The **Reports** section shows Applicable Policies & Procedures, Work Products w/Descriptions, Work Product with Gates, Success Criteria with Gates, and Applicable Gates. The **Program Type** section lists various program types with checkboxes for selection.

The screenshot shows the T3G Reference Model interface. It includes a **System Requirements Analysis** section with a flowchart showing the process from Requirements to System Requirements Analysis. The **Work Product Resources** section lists various resources with checkboxes for selection. The **Functional Areas** section lists various functional areas with checkboxes for selection.

- Affordability is the practice of ensuring program success through ***the balancing*** of system performance (KPPs), total ownership cost , and schedule constraints ***while satisfying mission needs*** in concert with long-range investment, and force structure plans of the DoD
- To meet these principles we are recommending guidance for *Affordability and SE Tradeoff Analyses* that ***yield visibility*** into the relationship among the life-cycle phases, the KPPs and mission effectiveness. Key issues to be resolved
 - Quality of empirical data for estimation
 - Ensuring compatibility of affordability principles with budget and competitive procurement policies and processes
 - Life-cycle RAA (responsibility, authority & accountability)

- CMMI can help diverse cultures establish a common process framework to enable Program Execution success
- Strong, disciplined acquisition and development processes based on CMMI models (ACQ, DEV, SVC) is essential for meeting affordability challenges
