

N957

Navy Explosive Ordnance Disposal

Closing the Gaps On Persistent Engagement in the New Strategic Environment

Global EOD Conference

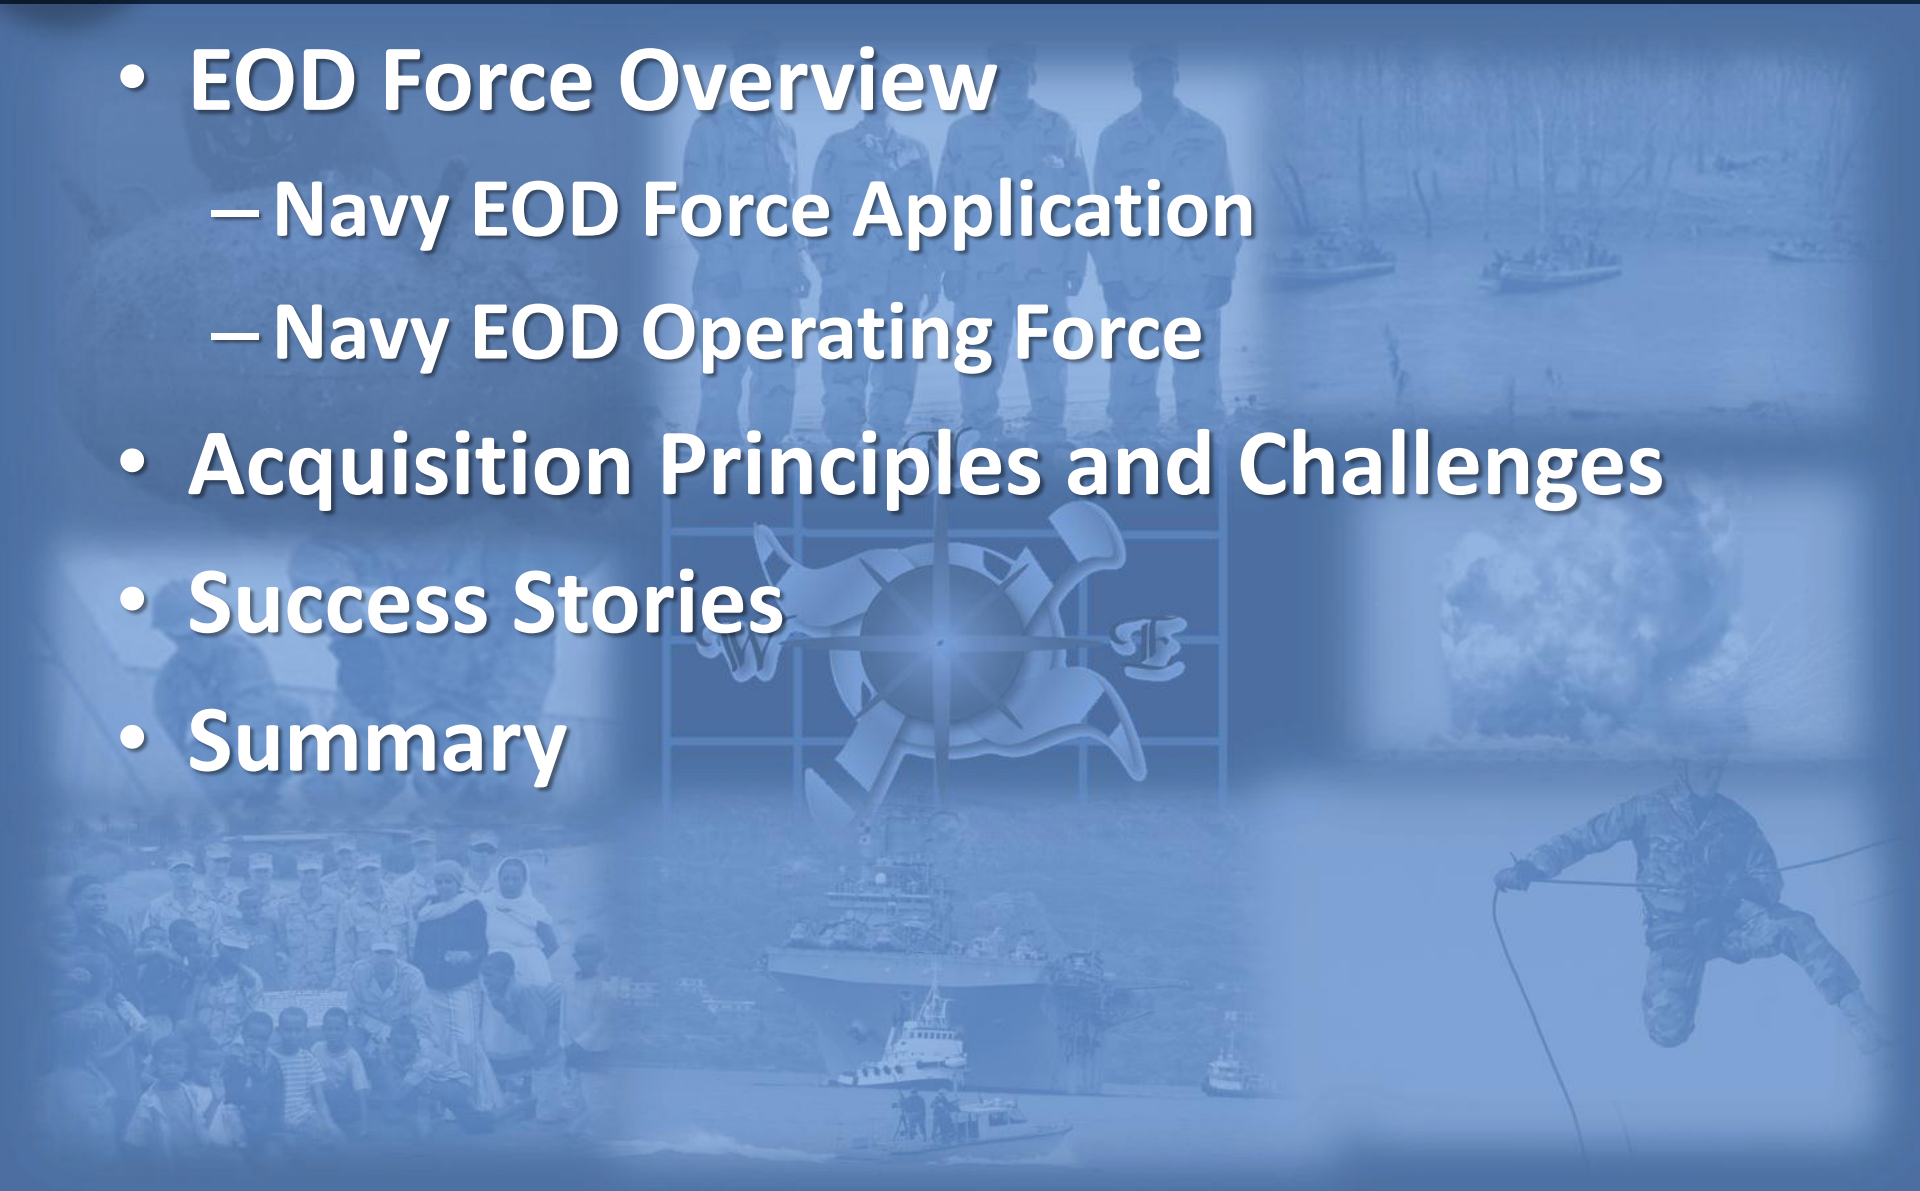

Commander Robert DeBuse

2 May 2013

Agenda

- **EOD Force Overview**
 - Navy EOD Force Application
 - Navy EOD Operating Force
- **Acquisition Principles and Challenges**
- **Success Stories**
- **Summary**

Navy EOD Force Application

CNO's TENETS
Warfighting First
Operate Forward
Be Prepared

Core Competencies EOD and UMCM

- Joint Operational Access , Freedom of Maneuver, and Protection
 - Underwater Mine Countermeasures (UMCM)
 - Unexploded Ordnance Disposal capabilities
 - Counter Weapons of Mass Destruction
 - C-IED [AtN, DtD, TtF Lines of Operation]
 - Support USSS VIP missions, Interagency DSCA missions
 - Support to deployed naval forces including Carrier Strike Groups
- Confront Irregular Challenges
 - Support to Special Operations
 - Theater Security Cooperation
 - Foreign Internal Defense to CCDRs
- Increase Battlespace Awareness
 - Combined Explosives Exploitation Cell capabilities
 - Weapons Technical Exploitation

Navy EOD Units of Action

Deployable Platoons (1off/7enl)

- Fleet and CDR Support
- Operational Control (OPCON) to Numbered Fleet Commanders
- Man/Train/Equip in CONUS, deploy OCONUS
- Support USSS and contingency operations in CONUS when available

Shore Detachments (1 off/3-5 enl)

- USN CONUS Responders
- Direct Support to Naval Region Commander or Base Commander
- Support to local Civil Authorities upon request

Persistently engaged

EOD Mission Areas

- Fleet Support (CSG, ESG, Shore, SpecOps Air Mobility, Diving, Limpet)
- Counter IED (DtD, AtN, TtF, CEXC, Ops/Intel Fusion)
- Confront Irregular Challenges (CT/CP, COIN/FID, USSS-VIP, ATPF)
- Counter Explosive Hazards (UXO/C-WMD/Humanitarian Mine Action)

UMCM Mission Areas

- Deploy / employ underwater systems (Divers, Unmanned, mammals)
- Operate in all underwater MCM domains (VSW, SW, Deep (300 fsw))
- Find, Fix, Finish, Exploit, Analyze (Enemy mine capability)

Navy EOD Force Structure 2013

■ EOD CONUS
 ■ EOD OCONUS
 ■ NON-EOD

PACOM

PACFLT

C3F

NECC

CNO

USFF

CTF 80

C6F

NECCPAC

EODGRU 1

EODGRU 2

EODMU 1

- 4 X MOB PLT
- 2 X MCM PLT
- 4 X OTH PLT

EODMU 3

- 5 X MOB PLT
- 3 X MCM PLT
- 4 X SOF PLT
- 1 X OTH PLT

EODMU 2

- 6 X MOB PLT
- 2 X MCM PLT
- 6 X SOF PLT

EODMU 6

- 8 X MOB PLT
- 2 X MCM PLT
- 1 X SOF PLT

EODMU 5

- 5 X MOB PLT
- 2 X MCM PLT
- 4 X CIF PLT
- 1 X OTH PLT

EODMU 11

- 6 X MOB PLT
- 2 X MCM PLT

EODMU 12

- 4 X MOB PLT
- 3 X MCM PLT
- 4 X SOF PLT

EODMU 8

- 5 X MOB PLT
- 2 X MCM PLT
- 4 X CIF PLT
- 1 X OTH PLT

EODESU 1

- 2 X OTH PLT

EODTEU 1

EODTEU 2

EODESU 2

- 3 X OTH PLT

MDSU 1

- 8 X MDS CO

293 Officers / 1952 Enlisted
 2 EODGRUs / 2 EODTEUs
 8 EODMUs / 76 EOD PLTs

MDSU 2

- 6 X MDS CO
- 1 X OTH PLT

Overarching Acquisition Principles

- Balance technology between current warfighter demand AND the future threat
 - Warfighter demand alone doesn't define the effort
 - OEF/OIF/OND – Must get inside the enemy's OODA Loop
- A streamlined RDT&E process that enables acquisition of future programs that are
 - Strong
 - Defendable
 - Responsive
 - Affordable
- Absolutely vital that the S&T process 'feed, complement, and accelerate' our acquisition process
- Identify 'common' joint systems and leverage current and projected acquisition POR initiatives

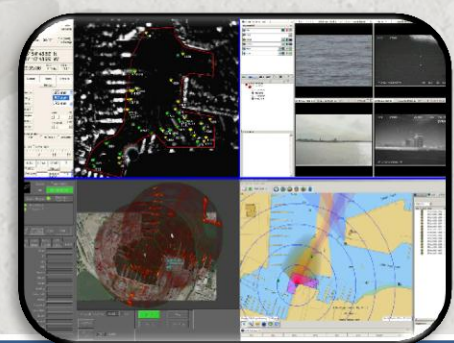

General Capabilities We Need

Flexible, Responsive,
Modular, Ready for
Use Systems

- Common architecture (C2)
- “Plug and play” compatibility for unique requirements
- Robust “reachback” capability
- Deployable equipment
- Stock configured for immediate use
- Platform and equipment commonality
- Solutions leverage COTS/GOTS

Consistently more
rapid than the
enemy’s OODA-loop

- Improved sensors
- Autonomous, task-driven systems
- Detect & predict threats (UW, littorals)
- Provide persistent COP
- Joint interoperability
- Open architecture (time and cost savings)
- Multi-mission applicability

Specific Capabilities in Development

Non-Lethal Effects

- Stand off vessel/vehicle stopping
- Reduced size, weight, and cost of directed energy systems
- Increased range of fielded systems

Unmanned Programs (Air and Surface)

- Modular Unmanned Surface Craft Littoral
- Nighthawk/Seahawk
- Advanced EOD Robotic System
- Advanced Composite Riverine Craft

UMCM UUV Programs

- Mine detect / classify from surf zone to high-water mark
- Organic MCM Without Cued ISR
- Limpet Mine Removal Tool
- U/W Explosive Object Recovery

Advanced EOD Robotic System (AEODRS)

UMCM Background

- Counter naval mines and other underwater explosives threats in near shore areas that “traditional MCM” assets do not yet address.
- UMCM Environment: Historically, those areas relegated to Navy EOD divers and combat swimmers to include:
 - Pre-assault/Advance Force VSW MCM ISO Amphibious Warfare missions
 - Underwater Explosives Threat response in Maritime Homeland Defense and other confined area scenarios.
- UUVs are applied today, wherever suitable/effective in these missions and are tactically integrated with Navy EOD diver and MMS until unmanned solutions can perform the full range of Detect-to-Engage tasks.

A tool bag approach to execute VSW MCM and M-HLD mission sets

MK 18 Family of Systems (FoS) Missions Types

Bottom Underwater Localization Systems (BULS)

The MK 18 Mod 1 Swordfish system autonomously conducts BULS missions to provide rapid object localization for confined areas (inlets, berthing areas, between piers and pilings, confined channels and rivers) and open areas in the VSW zone (10-40 feet of sea water (FSW))

Search-Classify-Map (S-C-M)

Both the MK 18 MOD 1 Swordfish and the MK 18 MOD 2 Kingfish systems are capable of autonomously conducting S-C-M missions which provide localization of bottom and tethered mine-like objects in specific lanes through the VSW zone (mowing the lawn).

Reacquire-Identify (R-I)

The MK 18 Mod 1 Swordfish autonomously conducts follow-on R-I missions to complement S-C-M missions. Dynamic search patterns are conducted in the area of previously determined mine-like objects to reacquire and further classify and identify mine-like objects.

Summary

- EOD must have systems with common architecture, modular components, standardized interfaces, and intuitive human controls
- Recent conflicts driving requirements and funding
- Coordinated, combined acquisition needed to reduce cost
- Contractor and Government business environments very competitive
- EOD is and will continue to be a large user of robotics

Questions
