

In operations in Iraq, Afghanistan, and elsewhere, there was a failure to recognize, acknowledge, and accurately define the operational environment. This led to a mismatch between forces, capabilities, missions, and goals.

“Decade of War: Enduring Lessons from the Past Decade of Operations”
Joint and Coalition Operational Analysis
June 15, 2012

I firmly believe that the ability of terrorists to rapidly adapt in our complex world, combined with our lack of persistence and imagination, will continue to create blind spots in our counterterrorism efforts. The implications of these gaps are significant.

Better Preparing Units for Gray Zone Operations

How do we integrate the complexities of the human domain into realistic military training?

Challenge

We have to do a better job of preparing units to analyze and understand complex operational environments (OEs). However, training exercises often don't support the real-world requirements.

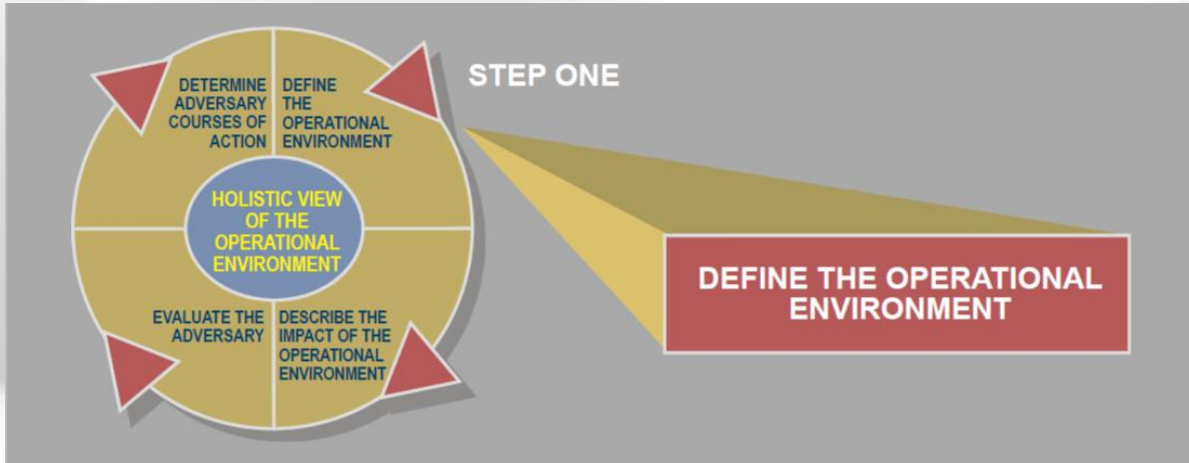

Why Is It a Problem?

Key Factors

- Scenario materials don't have the depth required for analysis
- Interactions of key actors and groups aren't represented
- Lack of realistic conflict dynamics (i.e. the causes of violence)
- Missing socio-cultural context
- Inability to accurately reflect the second- and third-order effects of operations
- Weak linkages to interagency, intergovernmental and nongovernmental partners
- No way to objectively measure progress against training tasks

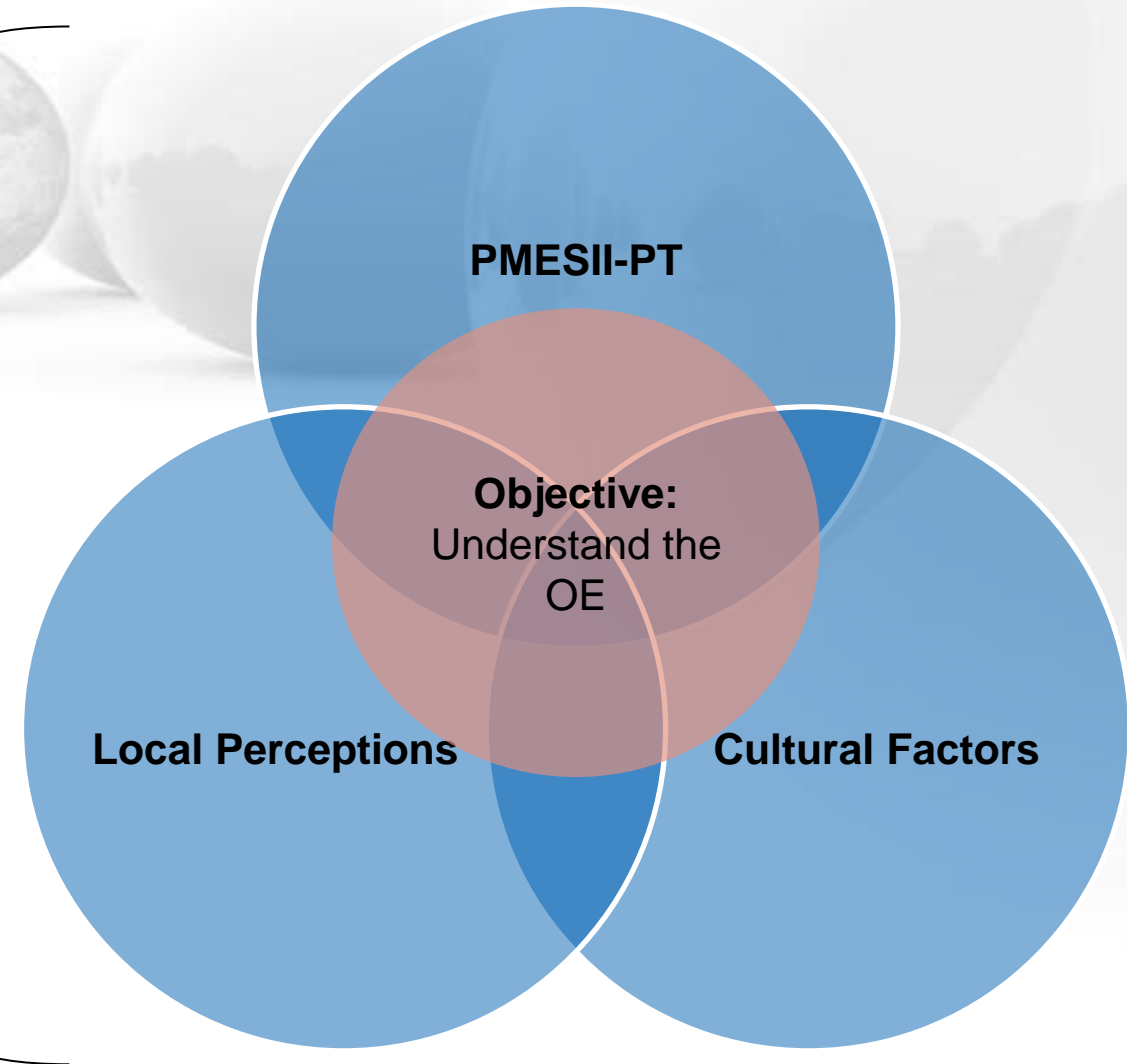

How do we bridge the current gap between mission requirements and training models?

A More Effective Training Model

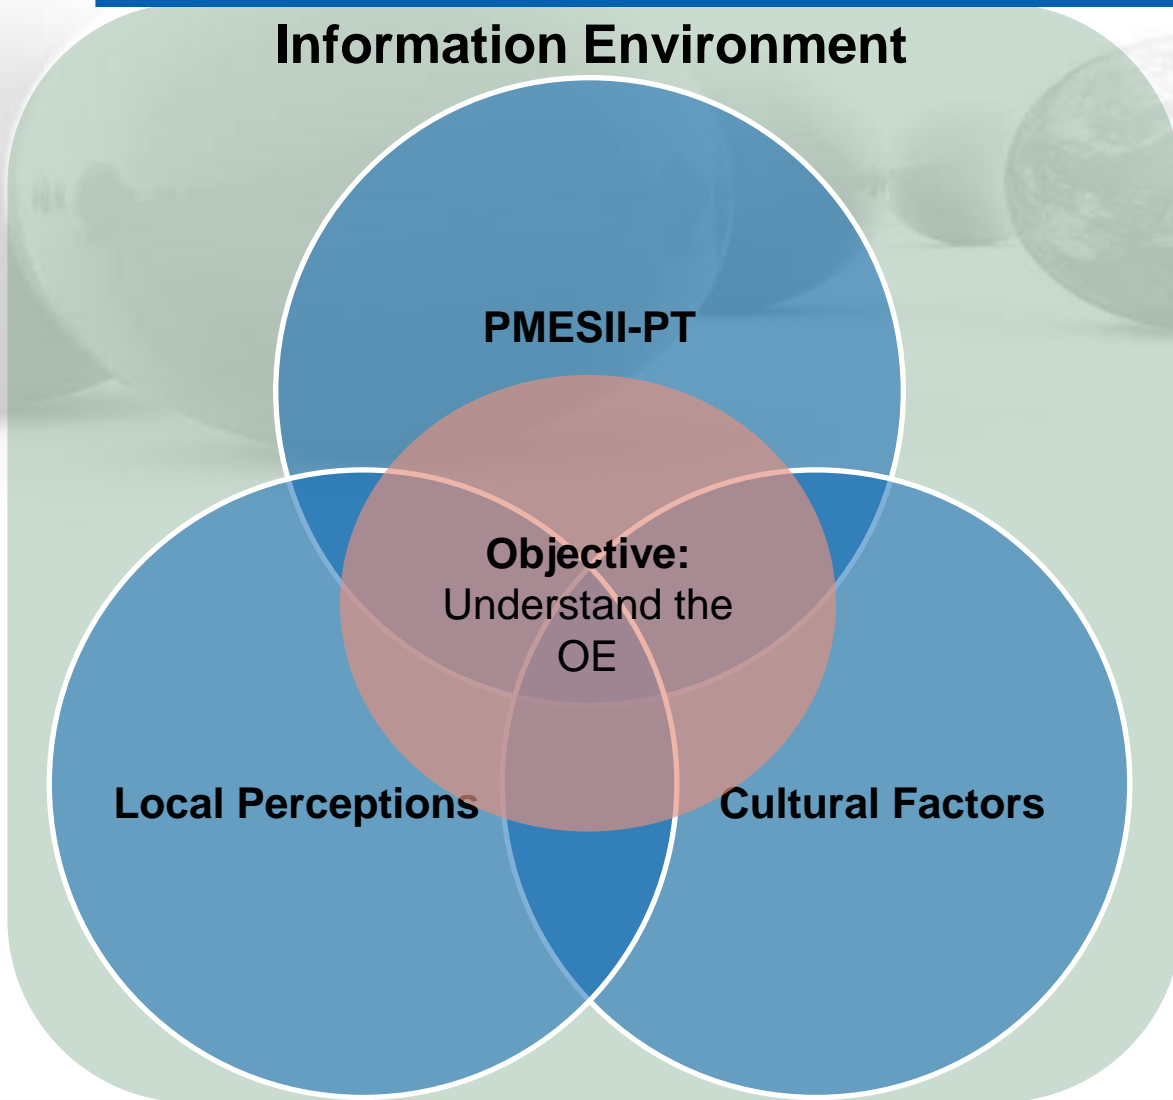

JP 2-01.3: Joint Intelligence Preparation of the Operational Environment (JIPOE)

Effective, holistic targeting (lethal & non-lethal) depends on understanding the OE.

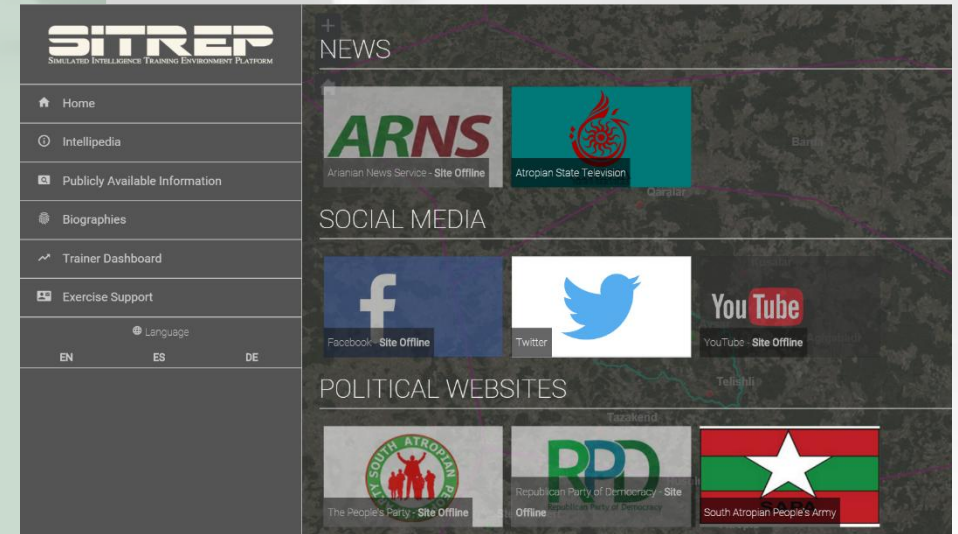

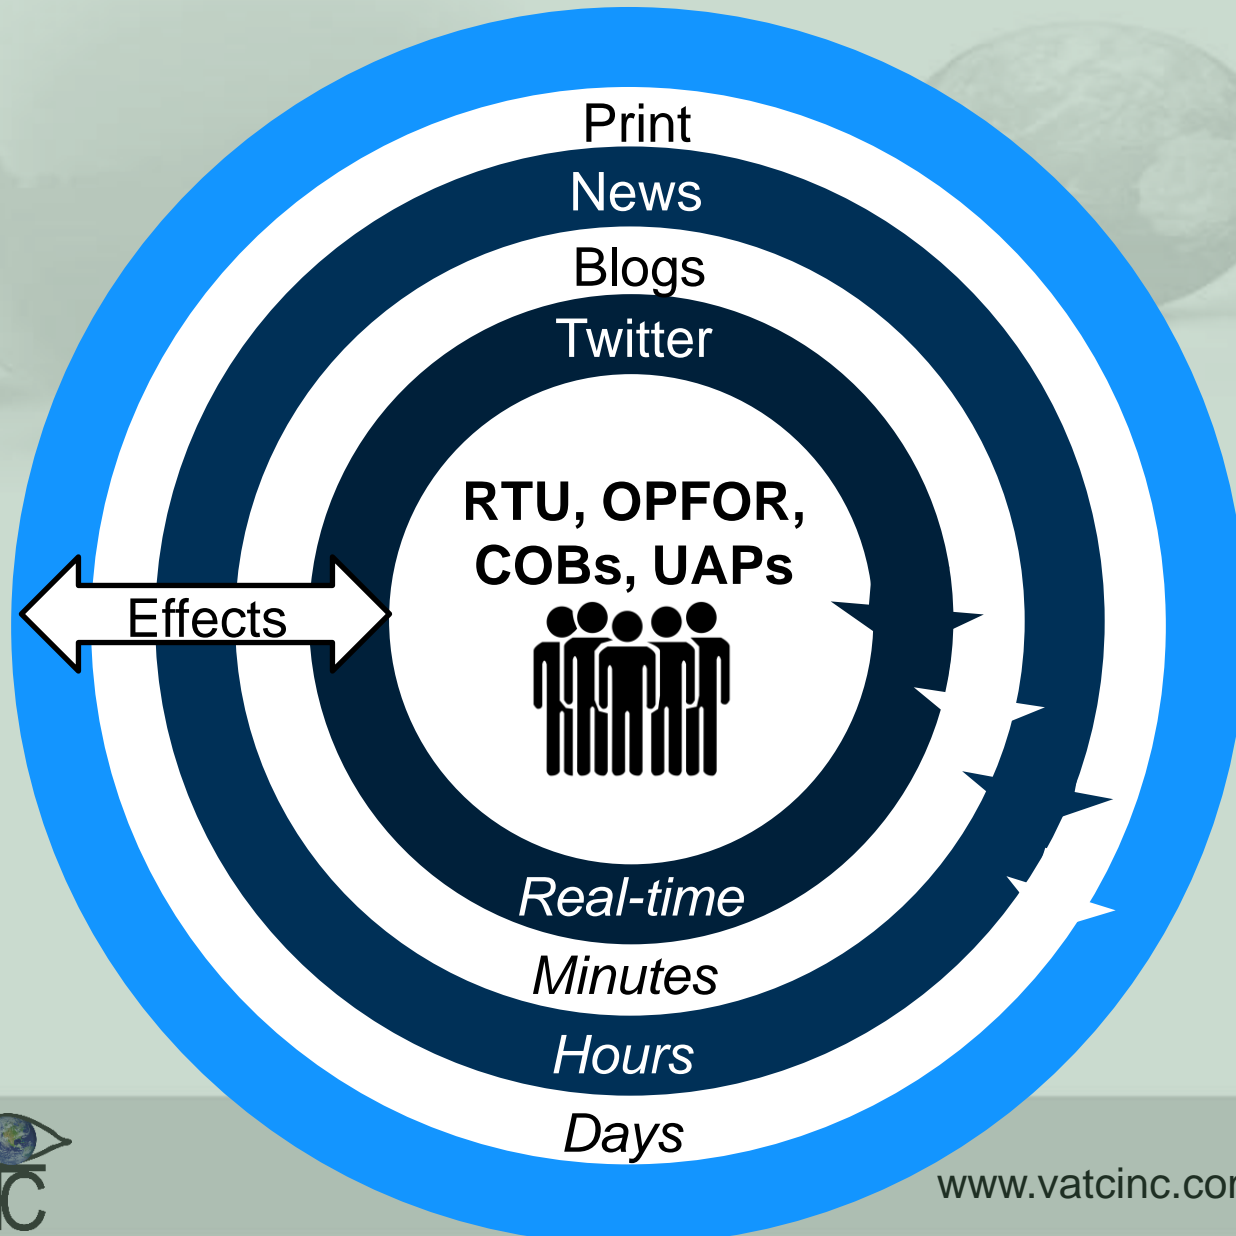

A Model Driven by Synthetic Media

- Enables understanding of the OE by reflecting PMESII-PT variables, local perceptions, and cultural factors
- Supports effective, holistic targeting
- Gives scenario materials depth
- Demonstrates interactions among key actors & groups
- Provides socio-cultural context
- Reflects the second- and third-order effects of operations
- Links to interagency, intergovernmental, and nongovernmental organizations
- Makes it possible to track users in real-time to measure effectiveness

A Complex, Responsive Information Environment

Training Vignette

Future Development

Lessons Learned

- Accurately define the training objective & associated trainings tasks
- Academics should link to and support specific training tasks
- All training data has to be synchronized (OE data, threats, biographies, intel threads)
- The information environment must reflect the target OE, not vice versa
- Social & news media platforms should be tailored to the OE
- Either the effect is immediate, or it doesn't matter
- *Technology tools are not a substitute for subject matter expertise*

This is only part of the solution for bringing the complexities of the human domain into training.
