

Helping the Department of Defense and VA Save Lives

The Columbia Suicide Severity Rating Scale

Kelly Posner, Ph.D.

Founder and Director – The Columbia Lighthouse Project

Suicide is a Global Public Health Crisis, Yet Preventable

Every 40 Seconds

**Nearly 1 million People Die From Suicide
Around the World Each Year and 25 million
Will Try**

“The under-recognized public health crisis of suicide”

Thomas Insel, Director of NIMH

More Deaths Than Natural Disasters, War and Homicide Combined

Suicide Kills More People than Car Crashes

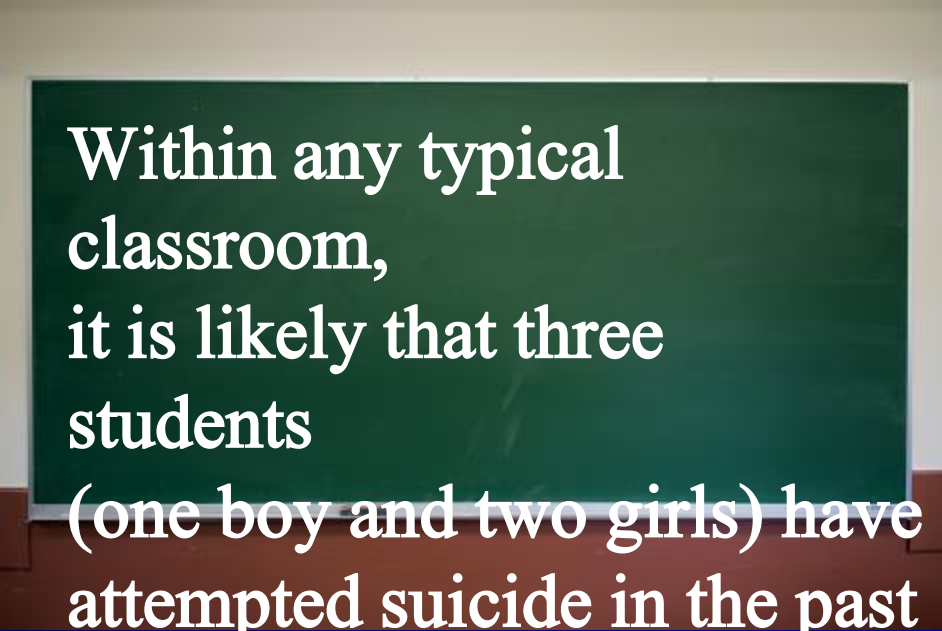

Suicide is the #1 Killer of Teenage Girls Across the Globe, 2nd Leading Cause of Death Among 10-24 Year-olds in the US...

Suicide Ideation and Attempts Are Surprisingly Common...

IN YOUR AVERAGE HIGH SCHOOLERS

- *8% attempted in the past year!*
- *17% seriously considered it*

Within any typical
classroom,
it is likely that three
students

(one boy and two girls) have
attempted suicide in the past

Suicide Touches Everyone

**135 People Are Affected for Every Death
And Effects Linger Across Generations Because
of the Silence that Often Follows**

U.S. Life Expectancy Decreases: Suicide Deaths Play a Role

Health & Science

U.S. life expectancy declines for the first time since 1993

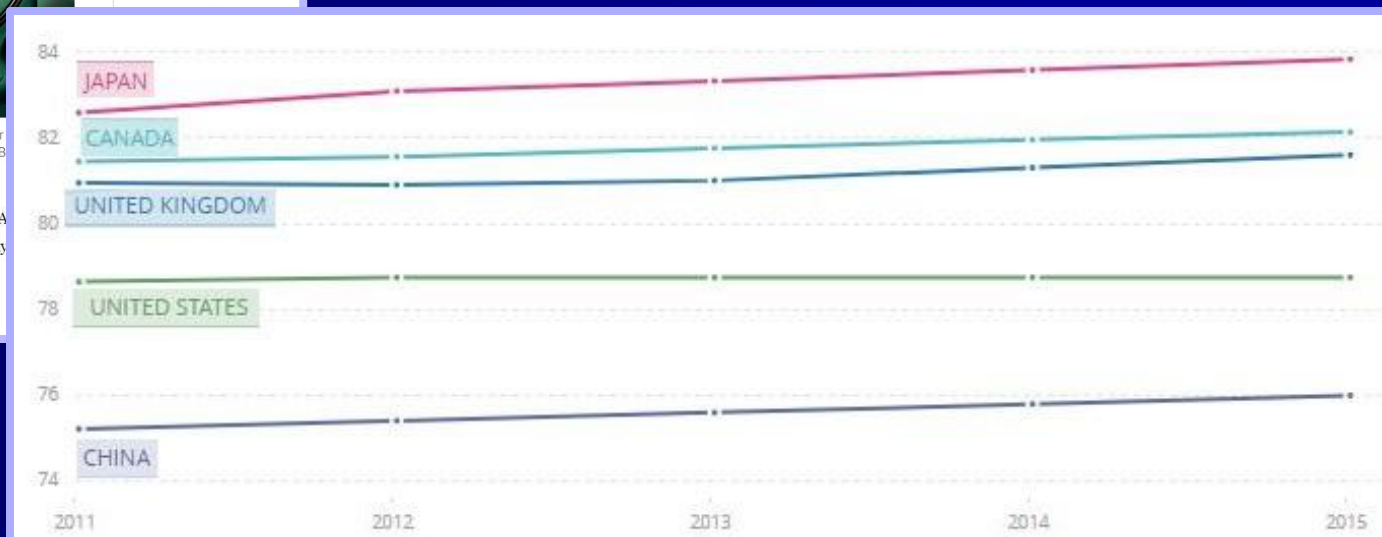

By Lenny Bernstein December 8, 2016

The Post's Lenny Bernstein explains a report that shows life expectancy for the U.S. has declined in 2015 for the first time since 1993. (Monica Akhtar, Gillian B. Triggs/Washington Post)

For the first time in more than two decades, life expectancy for Americans has declined last year — a troubling development linked to a panoply of worsening health problems in the United States.

Anomaly Among
Developed Nations

Breaking But Not Surprising News: Large Portion of Overdoses Are Suicides

Opioid Use Disorders and Suicide: A Hidden Tragedy (Guest Blog)

Share

April 20, 2017

*At a Congressional briefing on April 6, the **President of the American Psychiatric Association, Dr. Maria Oquendo**, presented startling data about the opioid overdose epidemic and the role suicide is playing in many of these deaths. I invited her to write a blog on this important topic. More research needs to be done on this hidden aspect of the crisis, including whether there may be a link between pain and suicide. —Nora*

In 2015, over 33,000 Americans died from opioids—either prescription drugs or heroin or, in many cases, more powerful synthetic opioids like [fentanyl](#). Hidden behind the terrible epidemic of opioid overdose deaths looms the fact that many of these deaths are far from accidental. They are suicides.

Let me share with you some chilling data from

About This Blog

Welcome to my blog, here I highlight important work being done at NIDA and other news related to the science of drug abuse and addiction.

Lack of Routine Assessment: ESSENTRIS Military Electronic Health Records

- **Retrospective chart review: 1500 cases admitted for suicide-related events to Walter Reed, 2001-2006**
- **11% admitted for serious suicidal ideation 12% with suicide attempt had no documentation of past suicide behaviors**
- **No suicide screening and/or assessment measure administered in a single case**

Economic Burden: What Not Being Able to Identify High Risk Costs...

- US (2010): **\$45 billion— lost wages and work productivity**
- 1,000 Non-Psychiatric Screened at Colorado University

Prior:

400% increase in hospitalizations
over past 2 years

300% increase in ED visits

Unlike Other Lethal Diseases Little Headway in Treating Suicide

Screening Works

- Meta-analysis concluded that **screening results in lower suicide rates in adults** (Mann et al., JAMA 2005)

“...say that over the years, 3 of their patients died by suicide soon after their medical appointment with them. It is their belief that if the medical clinic-wide suicide screening (Columbia) now being implemented had been in place at the time, **those 3 patient suicides may have been prevented**

One pilot site implemented the Columbia suicide screen in their family health clinic at every medical visit. **In the first month, that clinic identified 5 patients at high risk of suicide – each of whom would almost certainly have been missed prior to this change”** – Air Force Comm

Barriers to Help: Gender Difference Less Treatment Seeking In Men

➤ Suicide Attempts:

- Female >> male
- Rates peak in adolescence
- Concern: Latina youth and LGBTQ

➤ Suicide Deaths:

- Male : female = 4:1
- **41% vs 11% antidepressants in system**
- Working-age males (60%)

Stigma - Barrier to Getting Help: “Real Men Don’t Get Depressed”

“We obviously have a peer-to-peer stigma, the machismo that ‘I can’t admit that I have to see a counselor or psychiatrist, that makes me weak and we’re at war, and there can’t be any chinks in the armor.”

– Command Sgt. Maj. Chris Faris,
18-year veteran of Delta Force

Face of war: U.S. Marine Carlos 'OJ' Orjuela
photographed by Louie Palu

Veterans: Gender Barriers

Male Veteran Suicides (ages 18-29):
4.7x the rate of non-veterans
Increased 30%

Female Veteran Suicides (ages 18-29):
12x the rate of non-veterans
Increased 80%

Male Veterans Die by Suicide 4x Female Vets

Stigma Can Be Lethal

[My husband] said to his buddy, his fellow marine, "everybody goes through this." He was empathic; he said "you know, we've all been there. Take some time, take care of yourself. But **don't go to treatment** and **don't go on medication** because **you cannot do that and fly.**"

Kim Ruocco
Chief External Relations Officer
Tragedy Assistance Program for Survivors (TAPS)

The Power of Asking: Just Ask. You Can Save a Life.

“Most people considering suicide want someone to save them. What we need is a culture in which no one is afraid to ask. What we needed were the questions people could use to help save us. That’s why the pioneering change the C-SSRS is enabling is so essential to our humanity.”

– *Kevin Hines,
suicide attempt survivor*

**Identification is the first key
to saving lives...**

**If we can't reach those who
are suffering in silence, we
can't help them**

Columbia-Suicide Severity Rating Scale (C-SSRS)

Posner, K.; Brent, D.; Lucas, C.; Gould, M.; Stanley, B.; Brown, G.; Zelazny, J.; Fisher, P.; Burke, A.; Oquendo, M.; Mann, J.

- Developed in NIMH effort to address unmet need
- 10s of millions administrations
- Available in 116 languages
- Endorsed, Recommended, Adopted or Mandated by many National and International Agencies
- Deemed “most” evidenced supported
- All ages, All Special Populations

Why C-SSRS?

SAFETY FIRST

- *Reduce Workload*
- *Reduce Suicide*
- *Reduce Liability*

Internal and External Liability

Asking These Questions Protects Against Risk

“If a practitioner asked the questions...
It would provide some legal protection”

—Bruce Hillowe, mental health attorney specializing in malpractice litigation
(Crain's NY, 11/8/11)

“I believe it sets the standard...we take a
proactive position in patient safety” – Patient
Safety Risk Manager

“People don't get sued for
something bad happening, they get
sued for negligence.”

Adopted by CDC: Importance of a Common Language

“The C-SSRS is changing the paradigm in suicide risk assessment in the US and worldwide” – Alex Crosby

Also from CDC:
“Unacceptable Terms”

- *Completed suicide*
- Failed attempt
- Parasuicide
- *Successful suicide*
- Suicidality
- Nonfatal suicide
- Suicide gesture
- Manipulative act
- Suicide threat

Source: Posner K, Oquendo MA, Gould M, Stanley B, Davies M. Columbia Classification Algorithm of Suicide Assessment (C-CASA): Classification of Suicidal Events in the FDA's Pediatric Suicidal Risk Analysis of Antidepressants. *Am J Psychiatry*. 2007; 164:1035-1043. <http://cssrs.columbia.edu/>

C-SSRS... Vital Signs

Joint Commission and the C-SSRS

[Hospitals and health care systems] have either developed something themselves or they're using a piecemeal approach, with different tools in different departments:

What may appear to be a person at risk in one area may not appear to be at risk in another. **When the ED is asking their set of questions, and then the social worker asks another set,** then the psychiatrist asks another, you're reducing the signal strength.

You're not honing in on the needle in the haystack.

"The research shows that **this tool** will help organizations **focus on folks who are at highest risk.**"

"By adopting the C-SSRS, organizations ensure that **one tool is being used by all caregivers,** who can then use the same terminology when communicating with other caregivers...Using **the same language helps all caregivers** understand what the patient needs."

Why it's good to do one thing...

Science and the Public Health Demand Uniformity

- Moving away from a single instrument inherently degrades the precision of the signal
- The impact of imprecision **grows when incidence rates are low**
- Multiple measures increase noise, decrease precision and weaken rigor of epidemiological and research data

FDA: "It should be noted that the **use of different instruments is likely to increase measurement variability**...decreasing the opportunity to identify potential signals in future meta-analyses...this type of imprecision is **particularly problematic** in dealing with events that have a low incidence, as is the case **for suicidal ideation and behavior** occurring in clinical trials."

"Same Sheet of Music"

A Few Simple Questions to Save A Life: Identify Who Needs Help and Connect Them to Care

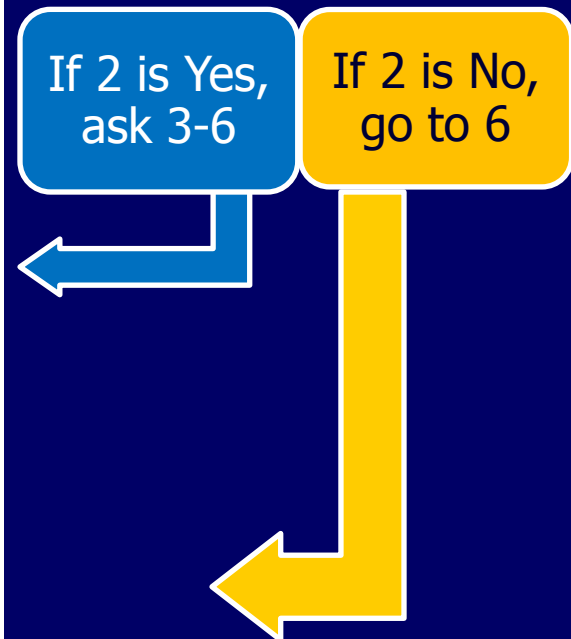

Minimum of 2 Questions

Maximum of 6 Questions

COLUMBIA-SUICIDE SEVERITY RATING SCALE
Screen Version - Recent

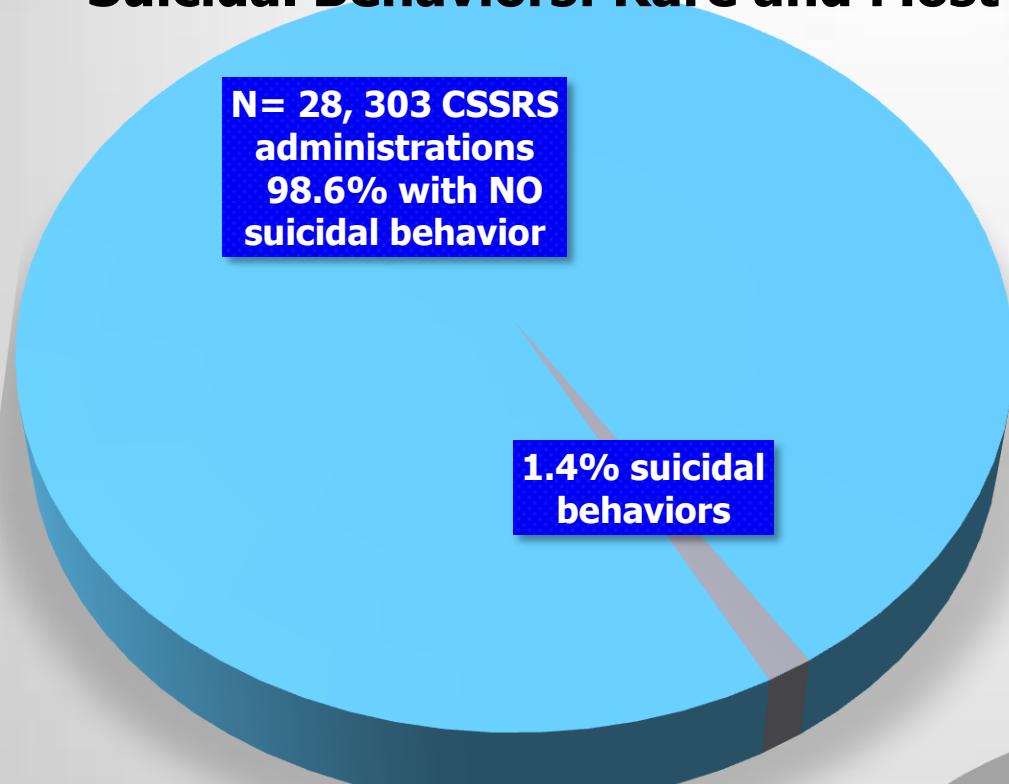

SUICIDE IDEATION DEFINITIONS AND PROMPTS	Past month						
	YES	NO					
Ask questions that are bolded and <u>underlined</u>.							
Ask Questions 1 and 2							
1) Wish to be Dead: Person endorses thoughts about a wish to be dead or not alive anymore, or wish to fall asleep and not wake up. <u>Have you wished you were dead or wished you could go to sleep and not wake up?</u>							
2) Suicidal Thoughts: General non-specific thoughts of wanting to end one's life/die by suicide, "I've thought about killing myself" without general thoughts of ways to kill oneself/associated methods, intent, or plan. <u>Have you actually had any thoughts of killing yourself?</u>							
If YES to 2, ask questions 3, 4, 5, and 6. If NO to 2, go directly to question 6.							
3) Suicidal Thoughts with Method (without Specific Plan or Intent to Act): Person endorses thoughts of suicide and has thought of a least one method during the assessment period. This is different than a specific plan with time, place or method details worked out. "I thought about taking an overdose but I never made a specific plan as to when where or how I would actually do it...and I would never go through with it." <u>Have you been thinking about how you might do this?</u>							
4) Suicidal Intent (without Specific Plan): Active suicidal thoughts of killing oneself and patient reports having <u>some intent to act on such thoughts</u> , as opposed to "I have the thoughts but I definitely will not do anything about them." <u>Have you had these thoughts and had some intention of acting on them?</u>							
5) Suicide Intent with Specific Plan: Thoughts of killing oneself with details of plan fully or partially worked out and person has some intent to carry it out. <u>Have you started to work out or worked out the details of how to kill yourself? Do you intend to carry out this plan?</u>							
6) Suicide Behavior Question: <u>Have you ever done anything, started to do anything, or prepared to do anything to end your life?</u> Examples: Collected pills, obtained a gun, gave away valuables, wrote a will or suicide note, took out pills but didn't swallow any, held a gun but changed your mind or it was grabbed from your hand, went to the roof but didn't jump; or actually took pills, tried to shoot yourself, cut yourself, tried to hang yourself, etc. If YES, ask: <u>Were any of these in the past 3 months?</u>	Lifetime						
	<table border="1" style="width: 100%;"> <tr> <td style="width: 50%;"></td> <td style="width: 50%;"></td> </tr> <tr> <td colspan="2" style="text-align: center;">Past 3 Months</td> </tr> <tr> <td style="background-color: red;"></td> <td style="background-color: yellow;"></td> </tr> </table>				Past 3 Months		
Past 3 Months							

■ Low Risk
■ Moderate Risk
■ High Risk

Highlights from the Science:

Suicidal Behaviors: Rare and Most Are NOT Suicidal Attempts

N= 28, 303 CSSRS administrations
98.6% with NO suicidal behavior

1.4% suicidal behaviors

Of the 1.4% suicidal behaviors:
87% (472) = interrupted + aborted + preparatory
vs.
Only 13% (70) actual attempts

Each type of suicidal behavior is **equally predictive**

Multiple behaviors = greater risk

Must ask about all

Everyone, Everywhere Can Ask and Need to Ask

“This is prevention for the masses now, not just the educated, the wealthy or those in the medical field. It is available and accessible for all of humanity.”

Answer Questions 1 and 2		In The Past Month	
		YES	NO
1) <i>Have you wished you were dead or wished you could go to sleep and not wake up?</i>			
2) <i>Have you actually had any thoughts about killing yourself?</i>			
If YES to #2, answer questions 3, 4, 5 and 6. If NO to 2, go directly to question 6			
3) <i>Have you thought about how you might do this?</i>			
4) <i>Have you had any intention of acting on these thoughts of killing yourself, as opposed to you have the thoughts but you definitely would not act on them?</i>			
5) <i>Have you started to work out or worked out the details of how to kill yourself? Do you intend to carry out this plan?</i>			
Always Ask Question 6		In the Past 3 Months	
6) <i>Have you done anything, started to do anything, or prepared to do anything to end your life?</i>			

Examples: Collected pills, obtained a gun, gave away valuables, wrote a will or suicide note, held a gun but changed your mind, cut yourself, tried to hang yourself, etc.

Any YES must be taken seriously. Seek help from friends, family, co-worker, and inform them as soon as possible.

If the answer to 4, 5, or 6 is YES, immediately ESCORT to the nearest Mental Health Provider, Emergency Department/Emergency Personnel.

DON'T LEAVE THE INDIVIDUAL ALONE.

STAY ENGAGED UNTIL YOU MAKE A WARM HAND-OFF TO SOMEONE WHO CAN HELP.

SUBJECT: Use of the Columbia-Suicide Severity Rating Scale

- Total force roll-out
 - In the hands of whole community
- ALL support workers: lawyers, financial aid counselors, chaplains

Must Go Beyond Medical Model: Army Suicide Decrease Steeper in Active Duty

Whole Community Systems Approach in the Air Force: Zero Suicide

Support Workers

- Clergy
- Legal Assistants
- Financial Aid Counselors
- Advocates
- Case Managers

Peers & Leadership

Security/Safety

- Overnights
- Explosive Ordnance Disposal
- Military Police

Spouses

Primary Care, Dentistry

Behavioral Health

Schools, Child & Family Services

Policy/Training Chaplains Remote - Peer to Peer in the USAF

Community Approach: On-Post/Off-Post Connections Ft. Carson Model

On-Post

Off-Post

- BH Providers in Schools

- Non-hospital Soldier assessment and care agencies

- Outpatient BH Clinics

- Hospital Screening

County-Wide Dissemination

One Example: Lapeer County, Michigan

**“Complete
Blanket
Coverage”** 

**Especially critical in
rural areas*

- Highest rates of suicide
- Large populations, spread out across great distances
- Less consistent access to primary care
- Closest physicians may be several hours away and overburdened
- High rates of gun ownership

- Court workers
- Mental health workers
- K-12 school staff: teachers, bus drivers, cafeteria workers, etc.
- Clergy
- Law enforcement
- ER staff
- Child welfare workers
- Police Officers, Sheriff, Road Patrol, Village & State Troopers

*** All first responders:** *EMT, Fire Department, Police Officers, etc.*

When A Community Comes Together There is Hope: Linking of Systems

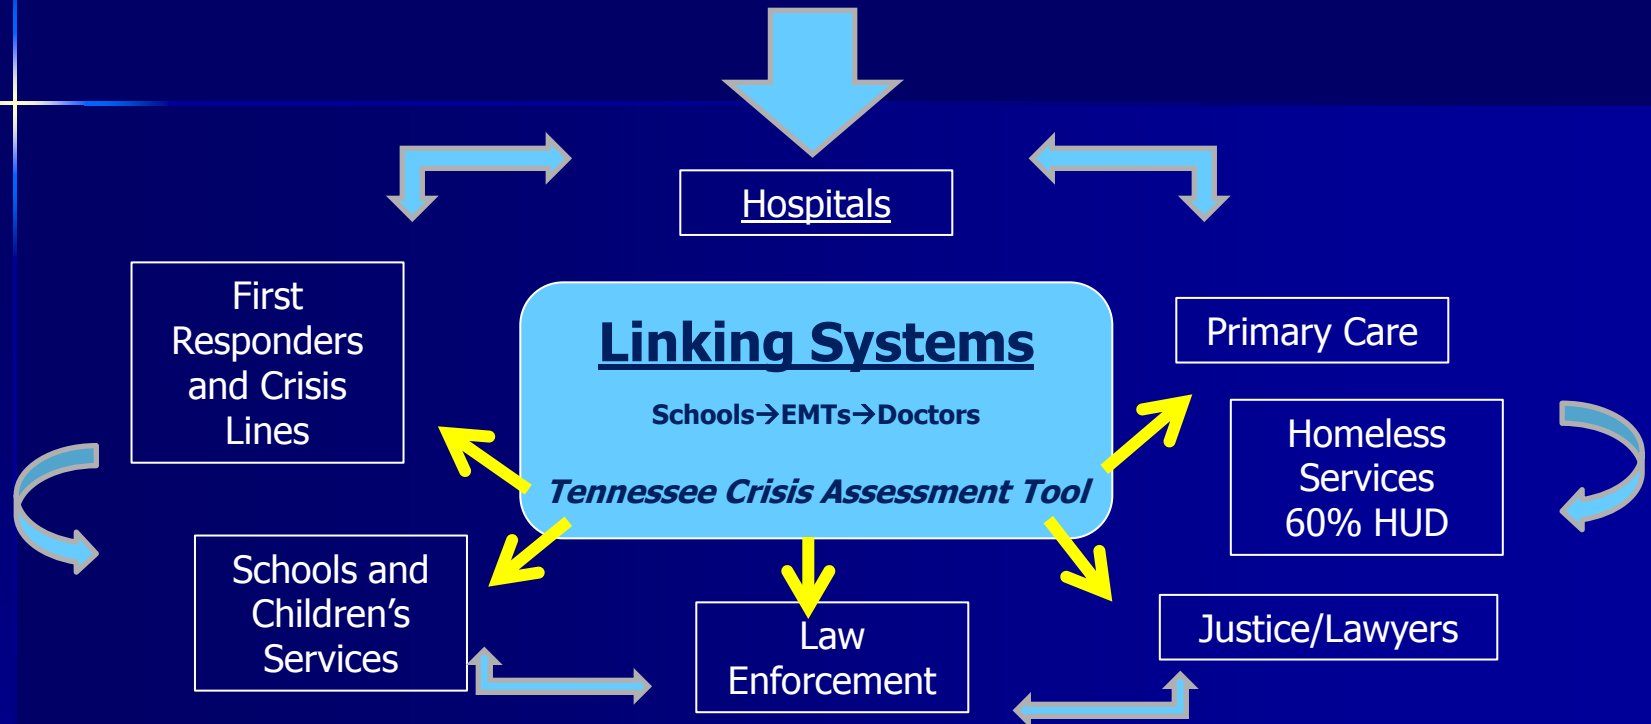

Department Health & Mental Health

Provider By Provider

All Services

Between Services

All Systems of Care

Policy at the state level, even legislation: 45-50 States

“...made a big difference. Historically, “turfed out” to their psychologist. However, after the entire team**discussions about suicide became more team wide and robust.** Everyone was now providing observations and ideas about suicide risk management and **wanting to take responsibility for client care.**” – OMH, NY

The Power of Asking...

The largest provider of outpatient community behavioral healthcare in the United States **reduced their suicide rates 65%** over 20 months.

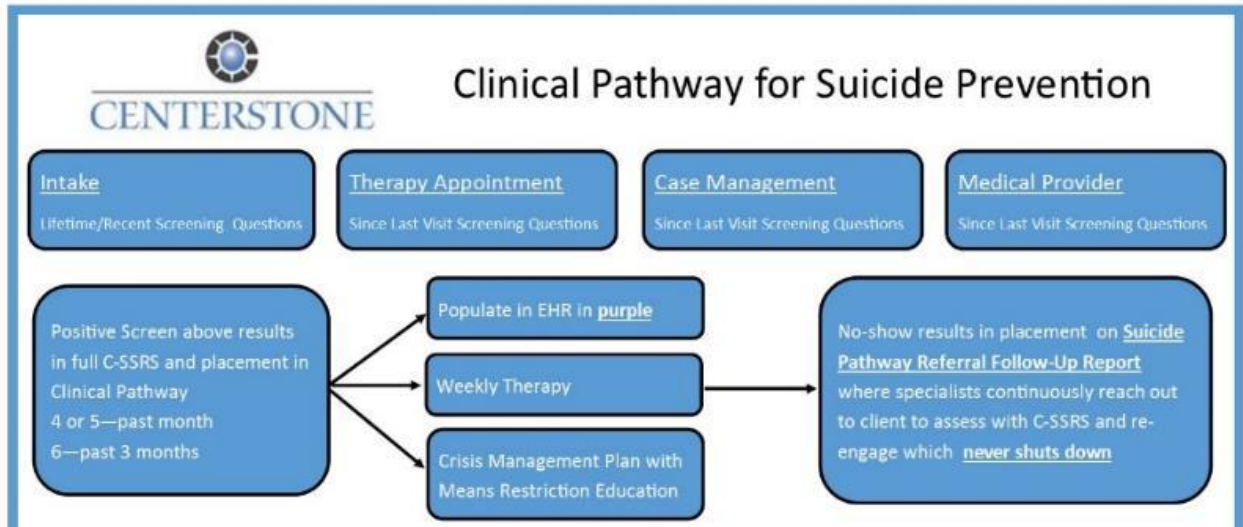

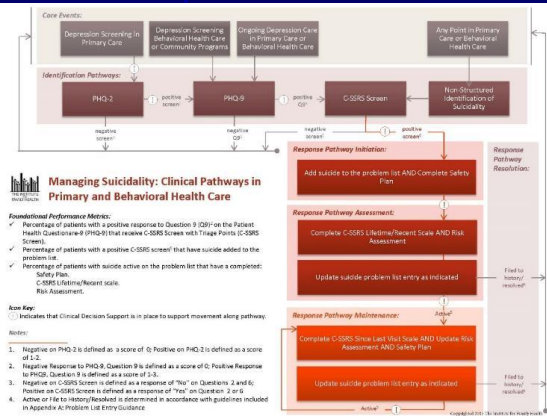

U.S. News & WORLD REPORT

The Care Pathway:

“with so many patients its like mining for gold and the Columbia is the sifter”

Alerting System...
suicide reduction in
primary care

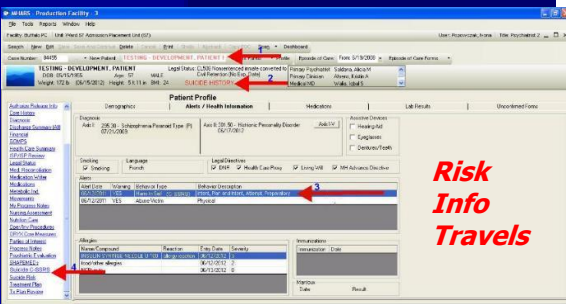

Alert and Monitoring System

The Electronic Health Record (EHR) is designed to offer assistance to providers assessing service recipients for high suicide risk. Based on information collected in the applicable Columbia SSRS tool, a service recipient can be identified as being at high risk for suicide. Those who will be considered at high risk for suicide will have a positive endorsement of **either of the following** (research found these to be highly predictive of completed suicides):

A positive endorsement, relative to the **past 30 days**, in the "Suicidal Thoughts" section of **item # 4** (Have you had these thoughts and had some intention of acting on them?) or **item # 5** (Have you started to work out or worked out the details of how to kill yourself? Do you intend to carry out this plan?).

A positive endorsement, relative to the **past 90 days**, in the "Suicide Behavior" section of **item # 6** (Have you ever done anything, started to do anything, or prepared to do anything to end your life?).

1. This is the current functionality in MARS that will show the patient's name in red with an exclamation point. If there is a warning for this patient, apply to all warnings, not just suicide risk. This is an new suggestion to show the agreed upon text if the patient has a current alert based off the C-SSRS. There will be a box that will state, "Go to Suicide: C-SSRS user: MARS's Link on the risk table."

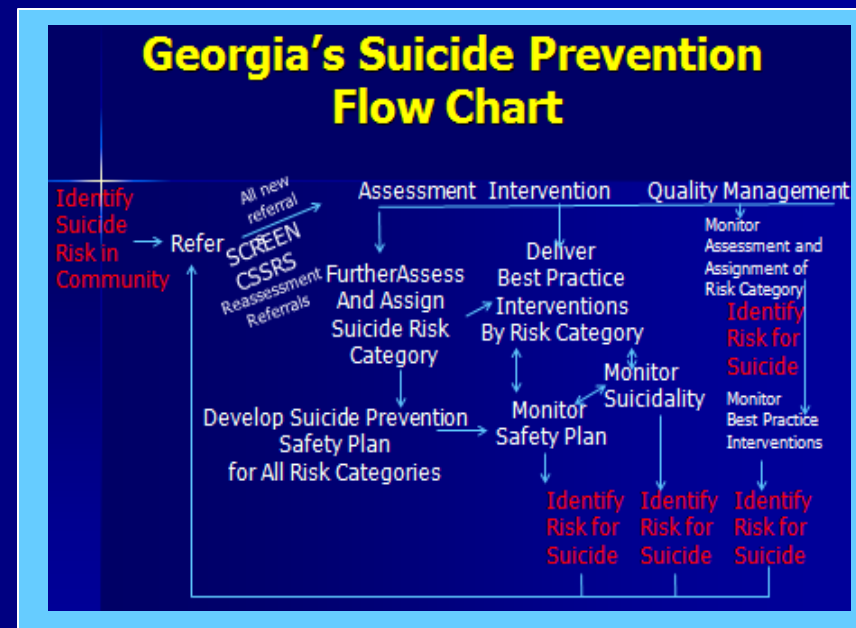

2. The description will show all the behaviors that have been selected for this patient throughout this lifetime. If they have a Warning, "YES" will be displayed in the Warning column.

3. To get more details, the user would need to click the C-SSRS icon on the left hand side. This would bring them to the C-SSRS main page. See other modules for further details.

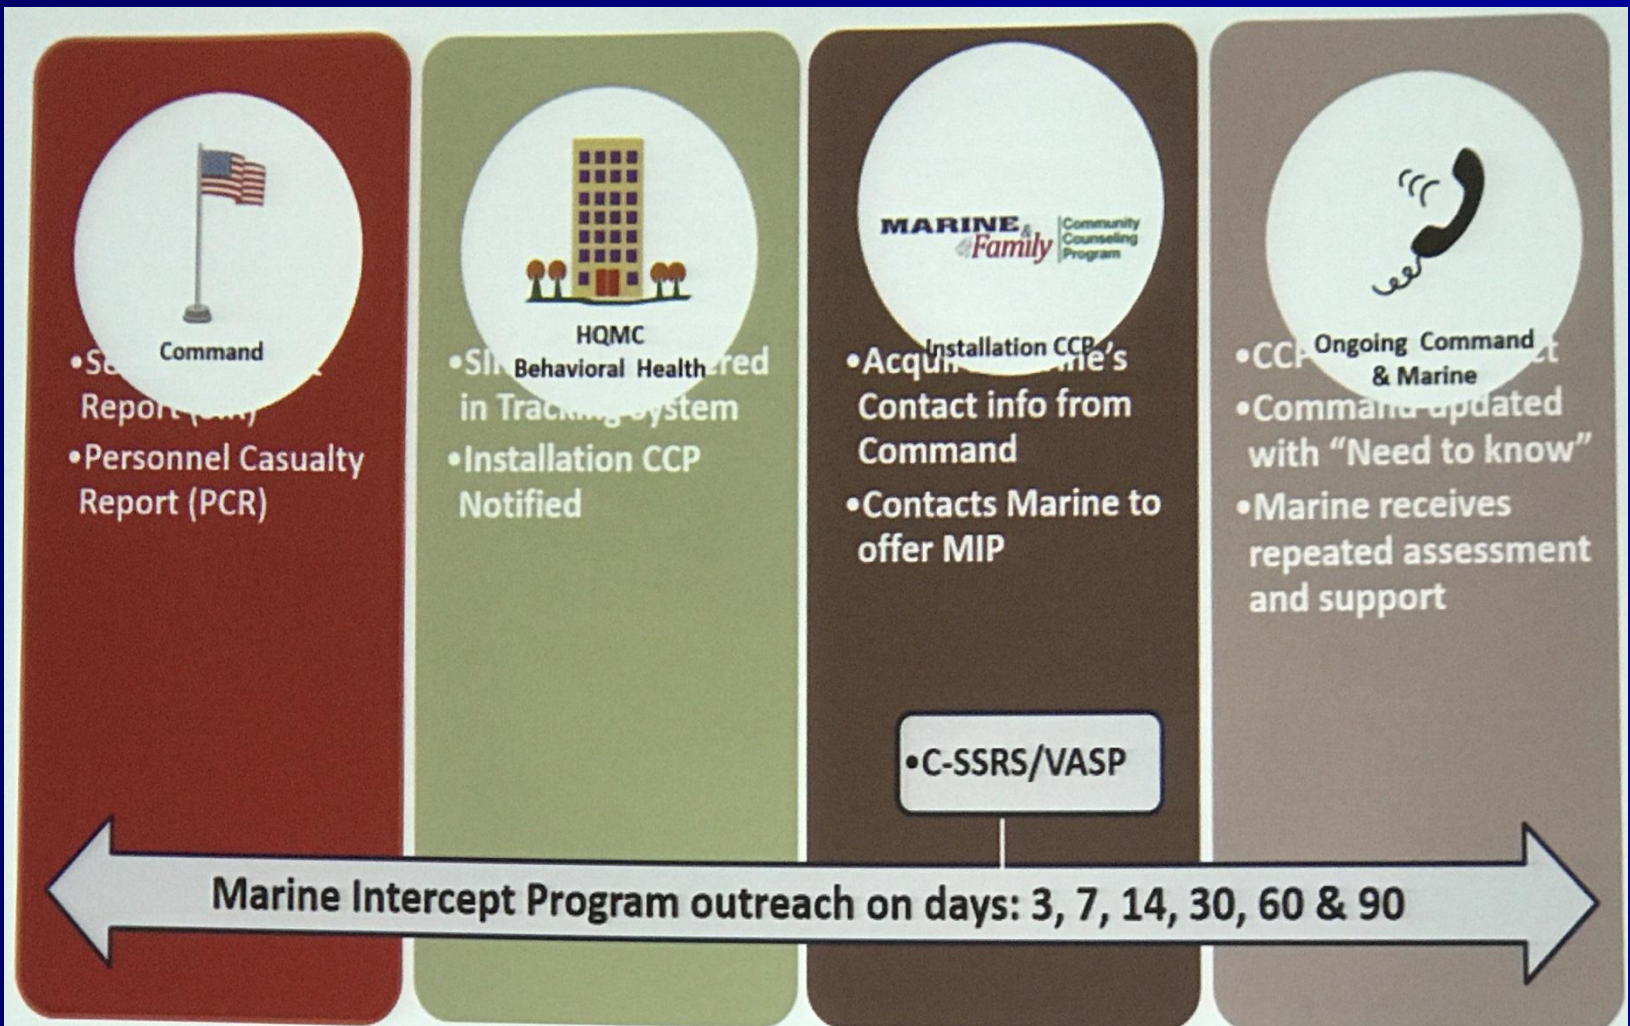

"AIM" Assessment, Intervention and Monitoring

Georgia DBHDD Implementation Plan

1. Introduced Statewide
2. Overview by Region and regional support
3. Policy development at state level for **all Medicaid providers**
4. Provider by Provider implementation
5. Providers implement in all services, between services, and in systems of care

Marine Intercept Program and C-SSRS Implementation Cycle

Public-Private Partnership: National Action Alliance – Toolkit for Zero Suicide

- NY- Eval of recent suicides all same picture: *No good risk assessment, no safety plan, no warm hand-off*
- Organizational vision of zero suicides
- C-SSRS and Safety Planning to be used in training all staff to screen **all patients** statewide

The screenshot shows the website for the National Action Alliance for Suicide Prevention. The header includes the logo and the text "The Public-Private Partnership Advancing the National Strategy for Suicide Prevention". Below the header, there are navigation tabs for "Zero Suicide in Health", "Zero Suicide Academy", and "Zero Suicide Advisory". The main content area is titled "Zero Suicide in Health and Behavioral Health Care" and contains several sections:

- Zero Suicide**: A commitment to suicide prevention in health and behavioral health care systems and also a specific set of tools and strategies. It is both a concept and a practice. Its core proposition is that suicide deaths for people under care are preventable and that the bold goal of zero suicides among persons receiving care is an aspirational challenge that health systems should accept.
- The Zero Suicide approach** aims to improve care and outcomes for individuals at risk of suicide in health care systems. It represents a commitment to patient safety—the most fundamental responsibility of health care—and also to the safety and support of clinical staff who do the demanding work of treating and supporting suicidal patients. Read more...
- Zero Suicide Toolkit**: The Clinical Care and Intervention Task Force of the National Action Alliance for Suicide Prevention identified essential dimensions of suicide prevention for health care systems, including health care plans or care organizations serving a defined population of consumers, such as behavioral health programs, integrated delivery systems, and comprehensive primary care programs. These dimensions are described in the Zero Suicide Toolkit.

On the right side, there is a section titled "New eLearning workshops available!" with two bullet points:

- Safety Planning Intervention for Suicide Prevention
- Assessment of Suicidal Risk Using C-SSRS

Made possible by the NY State Office of Mental Health and Columbia University.

At the bottom, there is a row of six small images with captions:

- 1. Creating the Zero Suicide Culture
- 2. Ensuring Every Person Has a Pathway to Care
- 3. Developing a Competent Workforce
- 4. Identifying and Assessing Suicide Risk Level
- 5. Using Effective, Evidence-based Care
- 6. Continuing Contact After Care

Policy connects risk level from Columbia to Safety Planning

VA System: C-SSRS in the Study and Identification of Suicide Risk

Tennessee Valley VA Healthcare System:

“Valuable tool to ensure that necessary steps were *taken to safeguard an individual or return them back home with support. It can help avoid unnecessary hospitalization or save a life.*”

- 8,000 Veterans in the VA system
- NO suicides during 4-year monitoring
- 3 of 8,000 Vets (.03%) high risk
- 3.65% of 4000 Vets with Schizophrenia had ideation with intent
- 46% had any lifetime behavior

The Power of Asking: The Gun Buyer Wants to Be Saved

Working with gun community to ask.....

An estimated 55 million Americans own a firearm

2/3 of gun deaths are suicide

**Identify Risk.
Prevent Suicide.**

Three simple questions to identify suicide risk:

1. Have you ever wished you were dead or wished you could go to sleep and not wake up?
2. Have you been thinking about how you might kill yourself?
3. Have you ever done anything or prepared to do anything to end your life (such as, given away valuables, written a suicide note, or held a gun but changed your mind)?

If the answer to one of these questions is "yes," or if you or someone you know is in crisis, **free and confidential help is available.**

Call **1-800-273-8255** or visit suicidepreventionlifeline.org

The Power of Asking- Help Address One of Our Nation's Prominent Crises

Over 1000 Mass Shootings in the US Since Sandy Hook Alone

**Up to 90% of school shooters had history of
suicide attempts or thoughts prior to attack**

The Power of Asking: Orlando Hostage Negotiators Seek Guidance in the Wake of Tragedy

Many hostage takers
are suicidal

“both identifying those in crisis
and in enabling us to keep more
personnel out on the street
instead of in the mental health
facility..... can reduce law
enforcement officer suicide
rates with this tool as well.”

- Lieutenant/
Crisis Negotiations Commander

*Impact on Care
Delivery and Service
Utilization...*

Research Supported Thresholds for Imminent Risk Identification

Operationalized criteria for triage and next steps whatever they may be (e.g. referral to mental health, one-to-one, etc.)

Indicated clinical management response

Implications:
Determining if able to return "fit for full duty"
Ability to deploy

	YES	NO
Ask questions that are in bold and underlined.		
Ask Questions 1 and 2		
1) Wish to be Dead: Person endorses thoughts about a wish to be dead or not alive anymore, or wish to fall asleep and not wake up? <i>Have you wished you were dead or wished you could go to sleep and not wake up?</i>		
2) Suicidal Thoughts: General non-specific thoughts of wanting to end one's life/commit suicide. "I've thought about killing myself" without general thoughts of ways to kill oneself/associated methods, intent, or plan." <i>Have you had any actual thoughts of killing yourself?</i>		
If YES to 2, ask questions 3, 4, 5, and 6. If NO to 2, go directly to question 6.		
3) Suicidal Thoughts with Method (without Specific Plan or Intent to Act): Person endorses thoughts of suicide and has thought of a least one method during the assessment period. This is different than a specific plan with time, place or method details worked out. "I thought about taking an overdose but I never made a specific plan as to when where or how I would actually do it...and I would never go through with it." <i>Have you been thinking about how you might do this?</i>		
4) Active suicidal thoughts of killing oneself and patient reports having some intent to act on such thoughts, as opposed to "I have the thoughts but I definitely will not do anything about them." <i>Have you had these thoughts and had some intention of acting on them?</i>		
5) Suicide Intent with Specific Plan: Thoughts of killing oneself with details of plan fully or partially worked out and person has some intent to carry it out. <i>Have you started to work out or worked out the details of how to kill yourself? Do you intend to carry out this plan?</i>		
6) Suicide Behavior Question <i>Have you ever done anything, started to do anything, or prepared to do anything to end your life?</i> Examples: Collected pills, obtained a gun, gave away valuables, wrote a will or suicide note, took out pills but didn't swallow any, held a gun but changed your mind or it was grabbed from your hand, went to the roof but didn't jump; or actually took pills, tried to shoot yourself, cut yourself, tried to hang yourself, etc. If YES, ask: Was this within the past 3 months?

California corrections department spent approx. **\$24 million in 2010** on a suicide-watch program, which they believe **could be cut in half by these methods**

MENTAL STATUS SCREENING

The following six questions ask about how you have been feeling. For each question tell me if you have felt this way NONE of the time, A LITTLE of the time, SOME of the time, MOST of the time, or ALL of the time.

In the past 30 days about how often did you feel...	NONE	A LITTLE	SOME	MOST	ALL
1. ...nervous?	0	1	2	3	4
2. ...hopeless?	0	1	2	3	4
3. ...restless or fidgety?	0	1	2	3	4
4. ...so depressed that nothing could cheer you up?	0	1	2	3	4
5. ...that everything was an effort?	0	1	2	3	4
6. ...worthless?	0	1	2	3	4
TOTAL SCORE FOR 1-6 = ____	Column Total =				

In the past month:

	YES	NO
7. ...have you wished you were dead, or wished you could go to sleep and not wake up?		
8. ...have you <i>actually</i> had any thoughts of killing yourself?		
If NO to Question 8, SKIP to Question 12		
9. ...have you been thinking about how you might do this?		
10. ...have you had these thoughts and had some intention of acting on them?		
11. ...have you started to work out or worked out the details of how to kill yourself? Do you intend to carry out this plan?		
12. Have you <u>ever</u> done anything, started to do anything, or prepared to do anything with any intent to die? (For example collected pills or a razor blade, made a noose, given things away, or written a goodbye or suicide note.) If YES, ask: How long ago did you do any of these things? <input type="checkbox"/> More than one year ago? <input type="checkbox"/> Between three months and one year ago? <input type="checkbox"/> Within the past month?		
13. If YES, ask: How many times have you done any of these things? <input type="text"/> times		

Scoring Rules	Instructions
1. If the total of 1 thru 6 = 8 to 12 → ROUTINE REFERRAL	1. Ask ONLY non-MHSDS inmates
2. If the total of 1 thru 6 = 13 to 17 → URGENT REFERRAL	2. Ask <u>all</u> questions just as they are written.
3. If the total of 1 thru 6 >= 18 → EMERGENT REFERRAL	3. All questions (except 12) apply to the last 30 days.
Questions 7-13	4. Repeat questions as necessary.
4. If item 7 = YES → ROUTINE REFERRAL	5. Score questions 1-6 by totaling the numbers in the boxes.
5. If item 8 or 9 = YES → URGENT REFERRAL	6. Questions 7-12 are YES/NO.
5. If item 10 or 11 = YES → EMERGENT REFERRAL	7. Use the scoring rules to determine need for referral for further evaluation.
6. If item 12 = More than one year ago → ROUTINE REFERRAL	8. If the inmate refuses → EMERGENT referral.
7. If item 12 = 3 month to 1 year ago → URGENT REFERRAL	9. In all cases, use best judgment to refer – no matter the answers to the questions.
8. If item 12 = Within past month → EMERGENT REFERRAL	
9. If item 13 = 2 or more → URGENT REFERRAL

Answer Questions 1 and 2	YES	NO
1) Have you wished you were dead or wished you could go to sleep and not wake up?		
2) Have you actually had any thoughts about killing yourself?		
If YES to #2, answer questions 3, 4, 5 and 6. If NO to 2, go directly to question 6		
3) Have you thought about how you might do this?		
4) Have you had any intention of acting on these thoughts of killing yourself, as opposed to you have the thoughts but you definitely would not act on them?		
5) Have you started to work out or worked out the details of how to kill yourself? Do you intend to carry out this plan?		
Always Ask Question 6	In the Past 3	
6) Have you done anything, started to do anything, or prepared to do any thing to end your life? <small>Examples: Collected pills, obtained a gun, gave away valuables, wrote a will or suicide note, held a gun but changed your mind, cut yourself, tried to hang yourself, etc.</small>		
<p>Any YES must be taken seriously. Seek help from friends, co-worker, chaplain and inform your supervisor/other member in YOUR chain of command as soon as possible.</p> <p>If the answer to 4, 5 or 6 is YES, immediately ESCORT the Sailor to the nearest Chaplain, Mental Health Provider, Unit Leader or Emergency Department.</p> <p>Military Crisis Line 1-800-273-8255 PRESS 1</p> <p>DON'T LEAVE THE INDIVIDUAL ALONE. STAY ENGAGED UNTIL YOU MAKE A WARM HAND-OFF.</p>		

Breaking the Silence

When We “Just Ask” We Break the Silence and Give Permission to Connect and Build a Path to Openness and Resilience Across Generations

“This is not only saving millions of lives, it is literally changing the way we live our lives, breaking down barriers that have been built over thousands of years. But we are just one nation and every nation deserves this lifesaving tool.”

Common Language in an Intervention in and of Itself: Peers Helping Each Other

- Building buddy-to-buddy quick-response support systems
- “Just Ask” is much more than a screening intervention
- Common language **builds connections**
- It’s a method with a message that fights loneliness and hopelessness that cause suicide.
