PREVENT AND IMPOSE TECHNOLOGICAL SURPRISE

DEFEND THE HOMELAND

- Cyber deterrence
- Countering hypersonics
- Bio threat detection and mitigation
- Defense against WMT

DETER & PREVAIL AGAINST HIGH-END ADVERSARIES

- Assault Breaker II
- Long-range effects
- Control of the EM spectrum
- Robust space

EFFECTIVELY PROSECUTE STABILIZATION EFFORTS

- Warrior performance
- Countering gray warfare
- 3D city-scale operations
- Behavior modeling and influence

FOUNDATIONAL RESEARCH

Understanding complexity, composable systems, advanced materials and electronics, trusted hardware and software, human-machine symbiosis, 3rd wave artificial intelligence, data and social science, new computing, and engineered biology.

Alternative computing

Engineered biology

Electronics Resurgence Initiative (ERI)

Artificial Intelligence Next Campaign

Increasing the pace of developing technologies and capabilities for the U.S. and allied warfighter

AI Next Campaign: \$2B over five years to drive AI technologies

90+ programs applying AI

RF spectrum

SC2

Drug discovery

Make-It

Piloting

ALIAS

PAI

ERI: \$1.5B over five years to drive microelectronics technologies

Consisting of **20+** new and existing DARPA programs, ERI aims to forge forward-looking collaborations among the commercial electronics community, defense industrial base, university researchers, and the DoD to ensure far-reaching improvements in electronics performance well beyond the limits of traditional scaling

PCAST Report

Added 7 programs in Defense Applications, Security, & Differentiated Access

2020 ERI Summit & MTO Symposium

Summit 2021 and ERI 2.0 BAA (Tentative)

5 Years

7 foundational programs

ERI officially starts with 6 programs in *Materials & Integration, Designs, & Architectures*

Request for Information: Microelectronics R&D Facility Capabilities for Prototyping ***ERI 2.0 Studies & Listening Tour***

Universities Commercial Defense

Robust space – Blackjack

UNCLASSIFIED

Military space – Pivot to Low Earth Orbit

Leverage:

Commercial LEO mega-constellation

- Global “Space Internet”
- High-speed crosslinks
- Launch and ground infrastructure in place

Develop:

Co-orbiting military demo constellation

- Rapid tech refresh
- Resilience
- Global persistence
- Autonomous ops
- Low-cost COTS bus
- Rapid response to future threats

Blackjack: Demonstrate a space order of battle architecture that cannot be easily defeated by a near peer, and enables one-to-two-year technology refresh cycles vs. current 10-year cycles

Jim Langevin @JimLangevin · May 21
 .@RepStefanik & I make the case in @thehill that federal investment in science, technology & innovation through support for agencies like @Darpa is a necessity & can help lead us out of the COVID-19 pandemic & protect us against similar future crises.

32 drugs screened using human organ chip technology

1ST open-source, interactive map of virus:host molecular interaction

8 antibodies selected for manufacturing (8,000+ discovered)

Partnered with the Services and Interagency

1ST blood sample received in the U.S.

3 EUAs enabled (8 others targeted)

10 military & commercial aircraft tested

38 APIs produced using flow synthesis, providing the first implementation of flexible, scalable, and portable production toward a diversified, resilient pharmaceutical supply chain

EUA: Emergency Use Authorization
API: Active Pharmaceutical Ingredient

Engineered Living Materials (ELM)

Engineer living building materials that grow on-site, self-repair, and respond predictably to their environment.

Air Combat Evolution (ACE)

Increase trust in combat autonomy by using human-machine collaborative dogfighting as its challenge problem.

A high-magnification micrograph of a microelectronic chiplet. The chiplet is rectangular and features a dense array of vertical lines and structures. At the top, there is a horizontal row of 80 small, square-like structures, each connected to a vertical line. These vertical lines extend downwards through the chiplet, forming a grid-like pattern. The chiplet is mounted on a larger, darker substrate. The overall appearance is that of a highly integrated, multi-lane optical I/O chiplet.

Photonics in the Package for Extreme Scalability (PIPES)

Develop in-package optical signaling for next-generation microelectronics. Pictured is an I/O chiplet with 80 lanes of optical I/O supporting 2 Tbps aggregate optical bandwidth.

Subterranean Challenge (SubT)

Revolutionize how we operate in the underground domain by developing novel approaches to rapidly map, navigate, and search underground environments during time-sensitive combat operations or disaster response scenarios.

Infrastructure resilience

DARPA RADICS (Rapid Attack Detection, Isolation and Characterization Systems) delivered novel technologies to rapidly restore the electrical grid after cyberattack.

DARPA launches entrepreneurial initiative to propel over 150 cutting-edge national security innovations to market

What: U.S. entrepreneurs paired with researchers to provide U.S. investment and business advice

Who: DARPA in partnership with IQT Emerge

Why: Ensure DARPA tech transitions to use for U.S. national security

Results to-date:

- **14** venture rounds closed
- **\$110M** in U.S. venture capital raised
- **\$0** foreign investment raised
- **12** joint development agreements and licensing deals with corporations
- **>100** top-tier U.S. investors in DARPA's Transition Working Groups

More recently

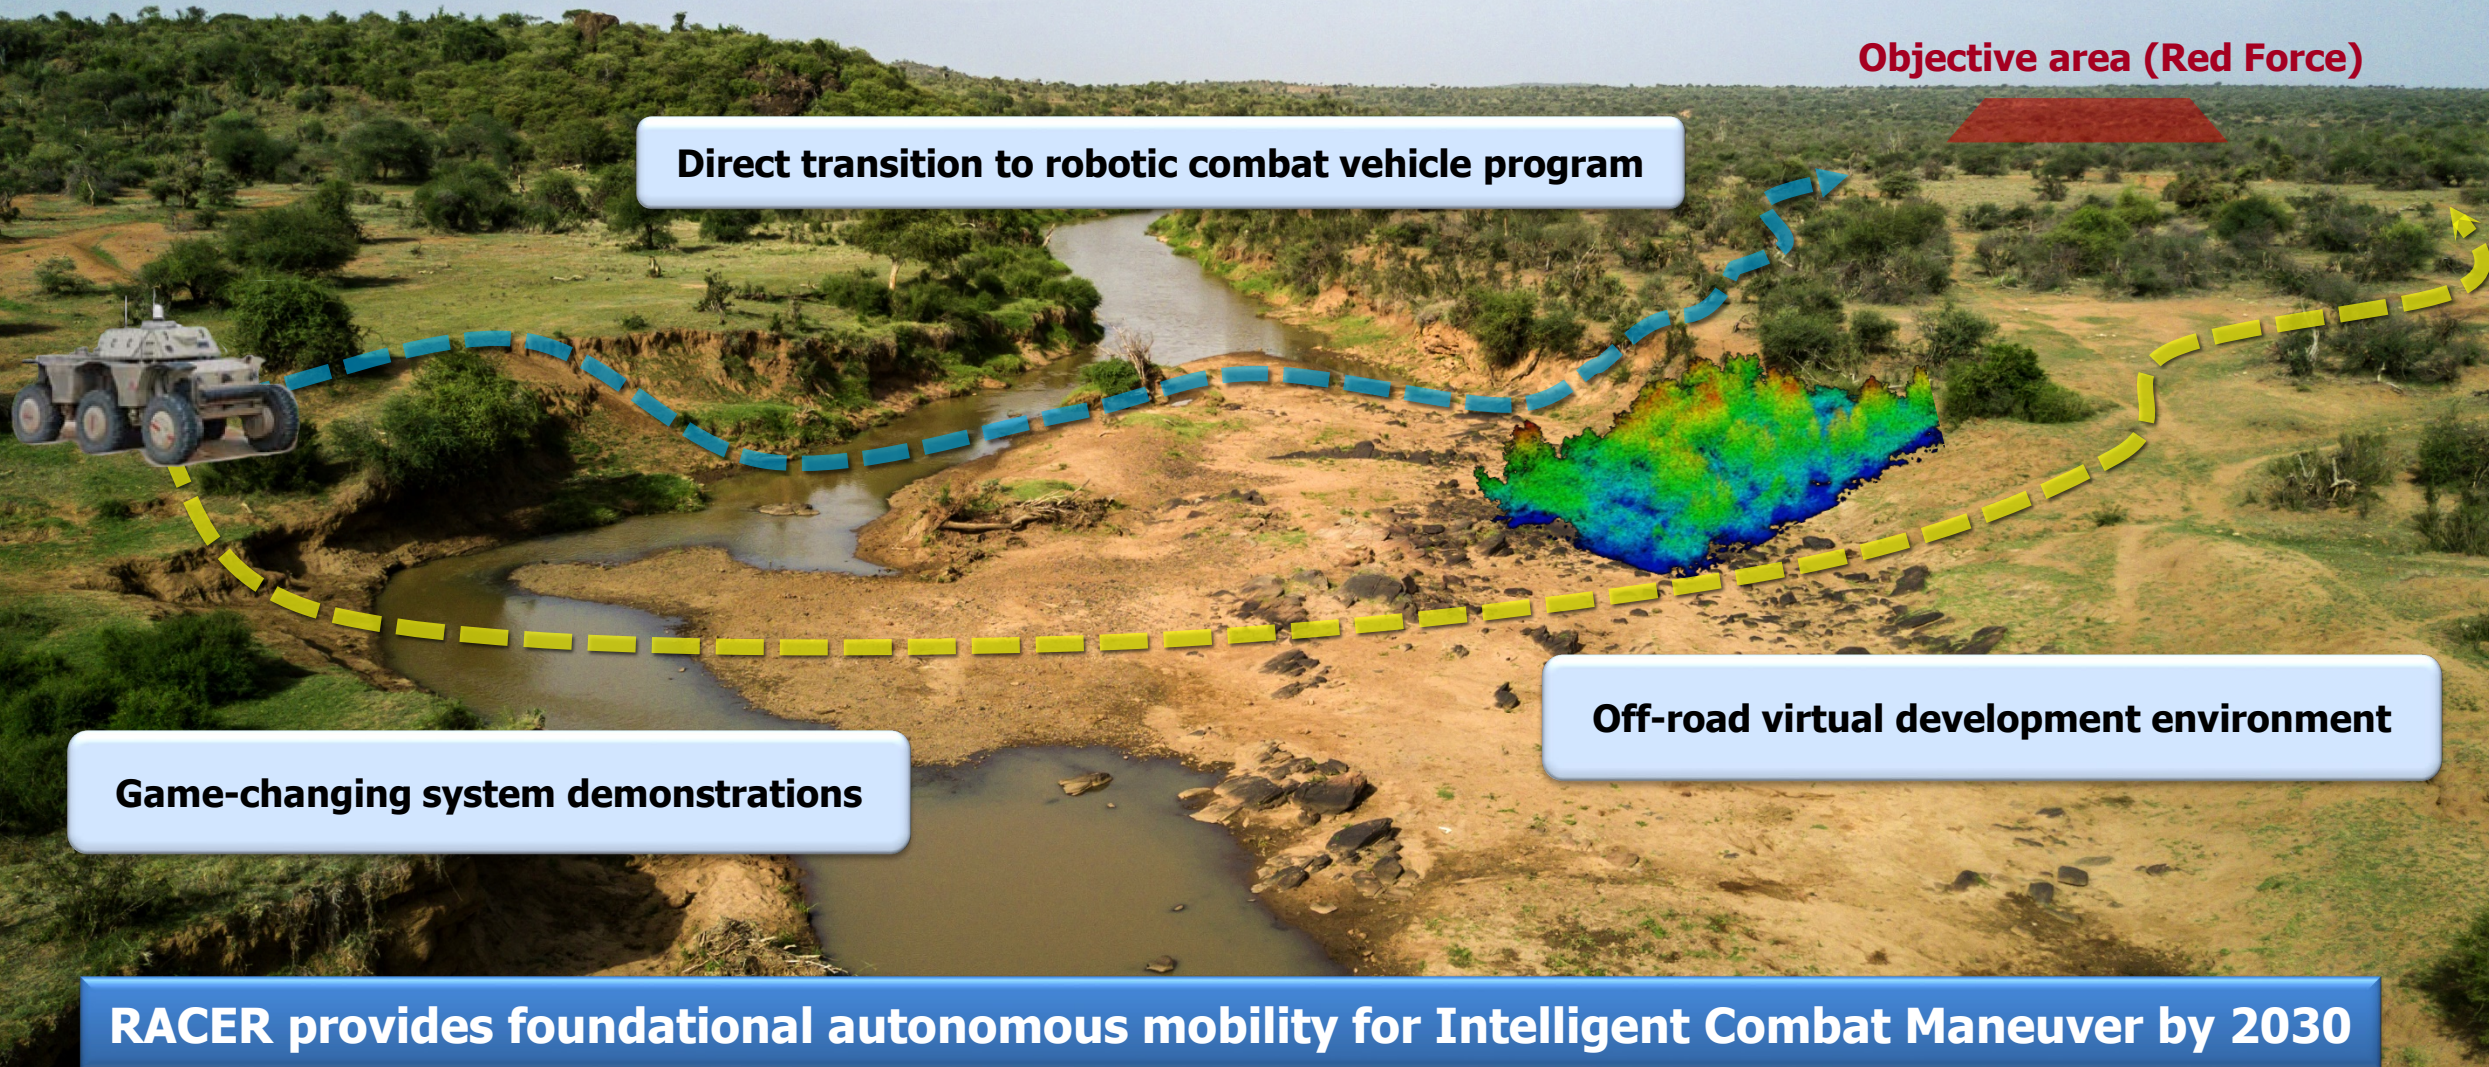

Novel Orbital and Moon Manufacturing, Materials, & Mass-efficient Design (NOM4D)

Develop new materials, manufacturing, and design technologies to enable future structures (i.e., large solar arrays, large radio frequency reflector antennas, and segmented infrared reflective optics) to be built on-orbit or on the lunar surface. Manufacturing in space will enable substantial improvements in structural efficiency, size, resiliency, and precision for future space-based platforms.

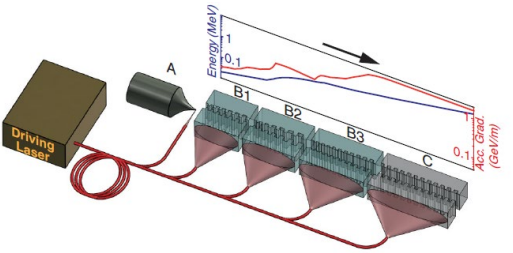

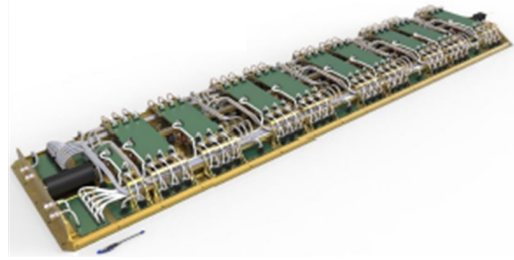

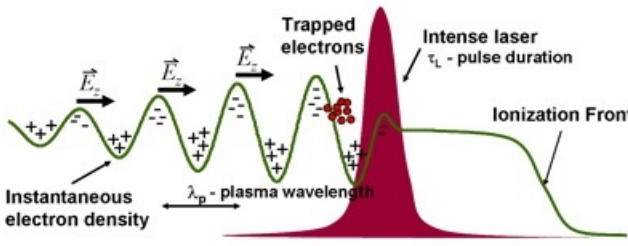

RACER vision: Autonomy to drive off-road at near-human speed

Advanced Concept Compact Electron Linear-accelerator (ACCEL)

Candidate technologies

<p>Conventional RF-driven Linear Accelerators (LINACs)</p> 	<p>Dielectric Laser Accelerators</p> 
<p>Conventional RF-driven LINAC with Gallium Nitride Amplifiers</p> 	<p>Wakefield Accelerators</p> 

Develop, build and demonstrate a compact, ruggedized electron accelerator for multiple applications

Enhanced Night Vision in eyeglass form (ENVision)

Lightweight devices with wide field of view

Infrared bands that see through obscurants

Multiple-band threat detection

Low-Entropy Machine Learning

Nature Communications **11**, 808 (2020) © Nature

The Landauer Limit

Quantum annealers can nearly reach the theoretical limit of information processing efficiency

Degrees of Freedom

The number of degrees of freedom in a quantum annealer scale exponentially with system size

Can quantum annealers accelerate Machine Learning applications?

Standard approach

1. Threatens DoD infrastructure and readiness
2. Requires maintenance
3. Reflects wave energy

Reefense approach

1. Protects DoD infrastructure and readiness
2. Self-sustains
3. Attenuates wave energy

Vision: Develop hybrid biological and engineered reef-mimicking structures to mitigate wave and storm damage that increasingly threaten DoD personnel and infrastructure
