

A Selective Model for Accelerated Realtime Training (SMART)

Amanda Bond

Lead Scientist, Soar Technology, Inc.

About SoarTech

- World leaders in Artificial Intelligence
- Spun off from the University of Michigan Artificial Intelligence laboratory in 1997 to support DARPA's Synthetic Theater of War (STOW) program
- Small business: ~124 employees
 - 29+ with PhDs, 35+ with Masters
- 2 offices (Ann Arbor; Orlando)
- ~70 active research contracts
 - DARPA, Navy, Army, Air Force

Challenges in Realtime Training

- Cognitive skills take numerous deliberately crafted repetitions to practice and master
- Costly live or simulation-based training events are the current gold standard for training
- Game-based training provides a readily available and successful alternative

Solution: SMART

The Selective Model for Accelerated Realtime Training (SMART) describes how to adapt a game grounded on the specific scenario context and performance for each game play.

Game Mechanics

Complexity, clutter, enemy threats, lethality, health, etc.

Accelerated Learning Interventions Spacing, scaffolding, hints, feedback types, etc.

Learning Outcomes

Cognitive skills, perception, situational awareness, decision-making, etc.

Learning Objectives

Task list items (e.g., conduct room clearing, select appropriate weapon, rules of engagement, etc.)

- Numerous accelerated learning models are available; most systems employ one or two
- SMART expands on the Training Intervention Matrix (TIMx; VanBuskirk et al., 2009) to select the best accelerated learning model for the in-game context custom to each player's aptitude
- Central are the learning outcomes to both accelerated learning models and game features and mechanics
- Skill models with SMART define the most opportune accelerated learning intervention and game mechanics to elicit performance measurement

Gan	ne Set Up (l	Domain Mod	dule)								Accelerated Learning interventions (Local Module)

An expanded, yet condensed version of the SMART model

Learning Outcomes v. Learning Objectives

		Informatio	ion Interface Information Handling Cogntive Task Execution						cution	Interpersonal	Interactions	Attention	Memory and Knowledge Acquistion			
Learning Objectives	Perceptual Judgement	SA: Perception	Spatial Orientation	Visual Scanning	Pattern Recognition	SA: Comprehension	Organizing/ Planning	Problem Solving / Decision Making	Resource Managemen t	Backup Behaviors	Error Correction	Attention Priorization	Declarative Knowledge	Procedural Knowledge	Strategic Knowledge	
Neutralize																
Booby Trap	+															
Move as a fire team																
Control movement of a fire team																
Perform movement techniques during an urban environment																

Learning Outcomes v. Learning Objectives

- Learning objectives are derived from MOUT training learning objectives
- These objectives were then mapped to learning outcomes based on the type of skills the learning objective included

#	Learning Objective		Neutralize Booby Traps			
071-326-0503	Move over, through, and around obstacles	Information Interface	 Perceptual Judgement Situation Awareness: Perception 			
052-193-013	Neutralize booby traps		- Situation Awareness. Ferception			
071-326-0501	Move as member of a fire team	Information	 Pattern Recognition Situation Awareness: Comprehension 			
071-326-0541	Perform movement techniques during an urban operation	наполіту				
071-326-5605	Select hasty firing positions during urban operation	Cognitive Task Execution	Problem SolvingDecision Making			
071-326-5611	Control movement of a fire team	Attention	Attention Prioritization			
071-325-4407	Employ hand grenades

Learning Outcomes v. Accelerated Learning Interventions

			Acc	elerated	Learnin	g Interve	entions (Lo	cal Mod	ule)				
Learning Outcomes	Instruct	ional Planni exercise)	ing (pre-	Exer Manip (dur	rcise ulation ring)	Feedback (during and post)							
	Exploration Based Training	Event Based Traning Approach	Role-Playing	Cueing/ Hinting	Highlighting	AAR	Environmental Feedback	Normative (future)	Outcome	Progress/ Velocity	Scaffolding/Fadi ng		
Information Interface													
Perceptual Judgement				х	х	х		х	х	х	х		
SA: Perception				х	х	х		х	х	х	х		
Spatial Orientation						х		х	х	х	х		
Visual Scanning				х	х	х		х	х	х	х		
Information Handling													
Pattern Recognition	х			х	х	х	х	х	х		х		
SA: Comprehension		х					х				х		
Cognitive Task Execution													
Organizing/Planning	х		х			х		х	х	х	х		
Problem Solving / Decision-Making	х			х	х	х		х	х	х	х		

Learning Outcomes v. Accelerated Learning Interventions

- Accelerated Learning Interventions are organized into three categories that describe when an intervention could be employed based off the TIMx
- Based off the TIMx, specific interventions were selected if could be employed for MOUT training environment

Intervention Category	Utilization	Types
Instructional Planning	Pre-exercise	Exploration Based Training Event Based Training Role-Playing
Exercise Manipulation	During	Cueing/Hinting Highlighting
Feedback	During and Post	AAR Environmental Feedback Normative Feedback Outcome Scaffolding/Fading

• These interventions provide a framework to **dynamically tailor** learning objectives for a trainee depending on the actions they are taking during an iteration

Learning Outcomes v. Game Mechanics

Benefits of the SMART Model

- Capitalizes on foundational research
 - TIMx (Van Buskirk et al., 2009), Durlach & Spain's FIT (2014)
- Supports both instructorless and instructor-led training
- Generalizable model to other tasks (kinetic, non-kinetic, sustainment, mass casualty) for realtime strategy, tactical agility, and cognitive decision-making
- The SMART architecture method is modular and componentized
 - SMART can drive each subsequent level automatically and intelligently generating levels based on skill model and learning outcome

So, SMART is not adaptive branching but a true intelligent tutoring system – and supports building an engaging replayable game

SMART Model Testbed: MOUT '86

Game Architecture

SMART Model Testbed: MOUT '86

- "Dungeon crawl" style real-time strategy game that tailors within and between an iteration based off the SMART Model
- Adaptive to facilitate learning across expertise from novice to expert, not just experts
- Players receive an Operational Order with mission, timeline info, METT-TC
 - Tailored based on player aptitude, learning objectives targeted
- Players plan their strategy using doctrinal maneuvers
- Game starts, and players must reassess and adapt their plan demonstrating cognitive flexibility and tactical agility as the game progresses

MOUT 86
