

Integrated Program Performance Management (IPPM)

A Data-Driven Approach to Program Management

Introductions

Scott LaFrance

Director of EVM at GDIT with over 23 years of program management/project controls experience in IT, Managed Services, and Manufacturing

Former board member of the National Defense Industrial Associations (NDIA) – Integrated Program Management Division. Adjunct instructor with the College of Performance Management. In 2020, he assisted the program team of the Battlefield Information Collection and Exploitation System (BICES) program to implement the Integrated Program Performance Management (IPPM) solution.

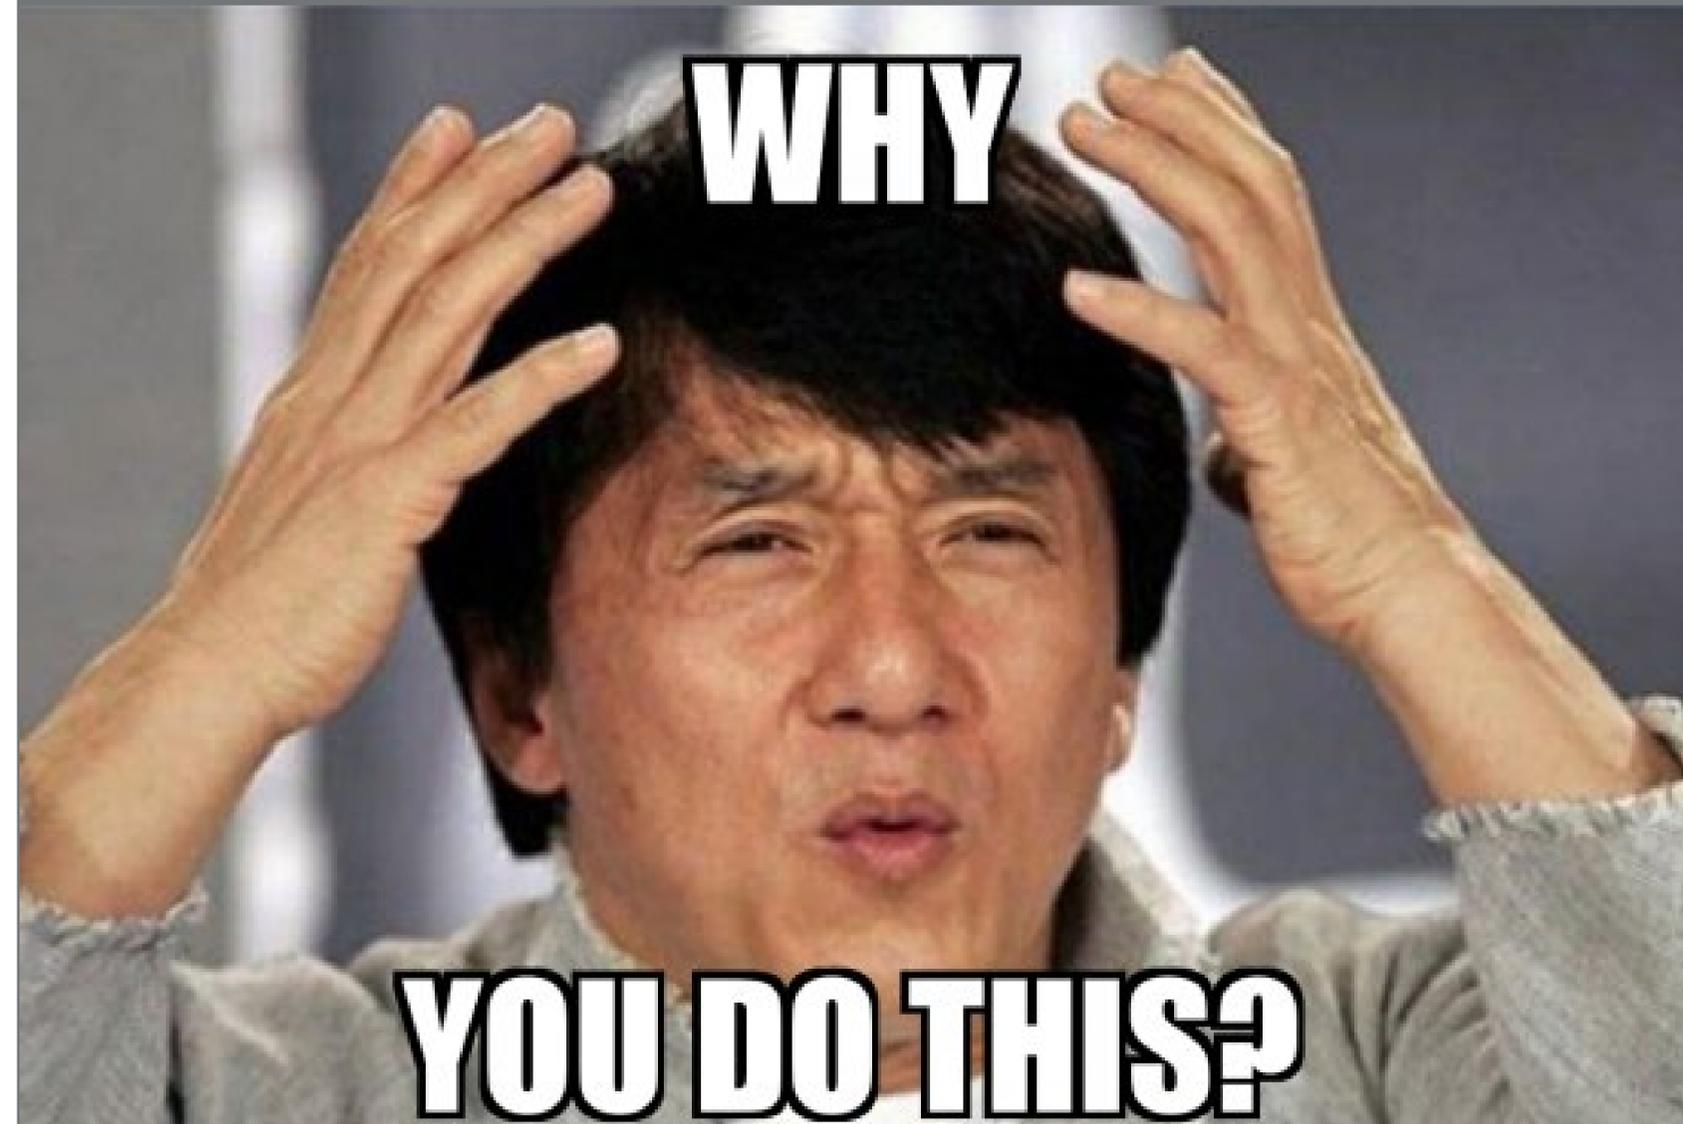

Karen Anderson

Operations Senior Manager for IPPM programs at GDIT with over 20 years of experience implementing and managing performance reporting requirements on government programs

As the Operations Senior Manager, Karen designed and managed the implementation of a tailored IPPM solution on the Battlefield Information Collection and Exploitation System (BICES) program. With input from the BICES program, she worked with Scott and her team to establish a system of processes and reporting around performance, resources, schedule, and cost management enabling the program to successfully meet customer requirements.

Bottom Line Up Front (BLUF)

- Effective program management requires integrated cost and schedule controls
- Common systems (like EVMS) can be costly and untimely due to compliance and reporting requirements
- The Integrated Program Performance Management (IPPM) solution we've implemented mitigates much of these concerns
- IPPM utilizes common Commercial Off The Shelf (COTS) tools and leverages existing processes and resources
- The IPPM solution is cost effective, tailorable, scalable, and value added
- Successful utilization requires support from program leadership

- Program Managers need integrated cost and schedule controls to help analyze and manage their programs' performance
- Recognize the benefits of EVMS without the regulatory elements, like the one employed at GDIT
- See how it can be implemented by any organization that needs it

An integrated cost and schedule control solution is essential to managing programs

Without Integrated Cost and Schedule Controls, Programs...

- Rely on plan vs. actuals and burn rates to determine performance (often a fatal mistake)
- Produce unreliable Estimates to Complete (ETCs) and Estimates at Complete (EACs)
- Disconnect resource allocation and utilization from the Performance Measurement Baseline (PMB)
- Are incapable of generating performance reports and metrics
- Lack traceability and transparency
- Remain incapable of highlighting scope creep
- Make root cause analysis difficult

Budget v Actuals (Spend Plan Management)

With Integrated Cost and Schedule Controls, Programs...

- Provide ability to generate performance reporting and metrics
- Promote management by exception through variance analysis
- Generate reliable ETCs and EACs tied to the PMB
- Present accurate cost position shifts in accordance with regular schedule status updates
- Deliver improved management visibility
- Provides ability to plan and manage resources
- Foster disciplined planning and control
- Enhance traceability between cost and schedule mechanisms

Budget v Performance v Actuals

If the benefits of an integrated cost and schedule control system are so clear, then why do programs continuously rely on plan vs. actuals to manage programs.....and fail?

Industry's typical integrated solution (EVMS) is slow and expensive

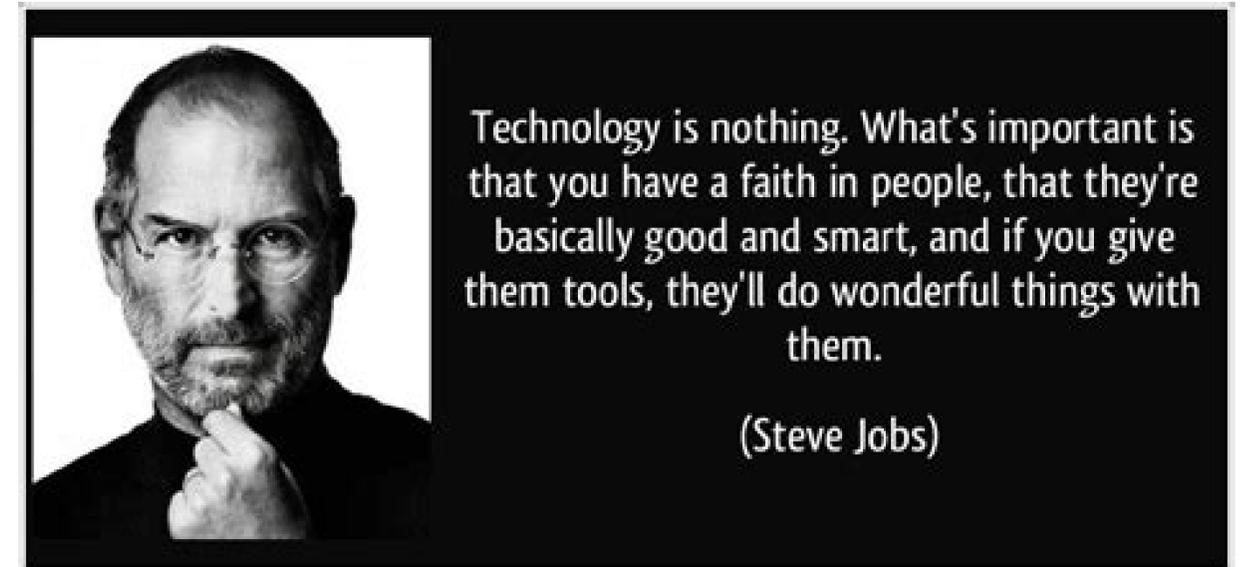

- Driven by EIA-748 contract requirements focusing on compliance over analysis
- Reports generated in 3rd week of the next reporting period
 - Too late for management to make decisions
 - Staff focused on compliance instead of analysis
- Requires multiple, specialized tools
 - EV cost engines (Deltek Cobra)
 - EV reporting tools (Deltek wInsight)
 - Custom APIs developed to load and manage data
- Requires specialized labor
 - EV Cost Engineers to drive the cost tools
 - Master Scheduler Planners with strong EVM experience
- Requires substantial investment in time and training from PMs and Control Account Managers (CAMs)

Costly integrated solutions like EVMS were designed for large DoD weapons systems. GDIT needed a cost-effective solution it could apply to programs of any size, complexity, and risk.....enter IPPM.

The IPPM solution is cost effective, tailorable, scalable, and value added

- Promotes data analysis and management decision-making rather than regulatory compliance
- Can be implemented with as little as one Master Scheduler Planner
- Scalable to contract size, complexity, and risk
- COTS tools employed are commonly used, low cost, and likely already in-house
- PowerBI and SSI Tools provide scalable reporting capability tailored to management needs
- Used today on contracts from \$10M to \$1.5B+ in FedCiv, Intelligence, and Defense
- Can be spun-up to meet portfolio-level management and reporting

With additional process discipline and artifact generation the IPPM solution can also fulfill EIA-748 EVMS contract requirements.

IPPM critical success factors are like pieces to a puzzle – they must fit together in order to work

- Executive leadership demanding actionable performance data/metrics
- A PMO understanding the value and need for an integrated cost and schedule control system
- A trained project controls team that as subject matter experts at driving the tools and processes and know how to deliver value-added analysis
- A set of defined processes and reports/dashboards aimed at promoting consistency, accuracy, and management value
- An integrated toolset

IPPM utilizes COTS tools and leverages existing processes and resources

The Integrated Program Performance Management (IPPM) Solution

COTS Tools

- MS O365  Microsoft 365
- MS SharePoint 
- MS Project Web-Access (aka Project On-line) 
- MS Excel with Power Query 
- MS PowerBI 
- SSI Tools 
- Barbecana Full Monte 

Existing Processes

- Real-Time Dashboard Reporting
- Standard Work Authorization
- Baseline Change Control
- Weekly Schedule Status
- Bi-Weekly Resource Management
- Schedule Risk Analysis
- ETC/EAC Analysis

Existing Resources

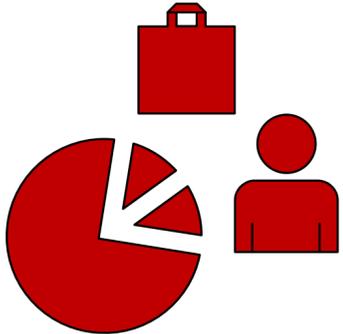

- Scheduler Planners*
- Cost Engineers**

* With strong cost engineering or EVMS background
** When warranted by size, scope and complexity

The elements of IPPM are simple, low-cost, and readily available to most organizations. Programs don't need a large roster of Subject Matter Experts. Anyone can implement an IPPM-like solution which is scalable for all type of programs.

Roles & Responsibilities

External Customer

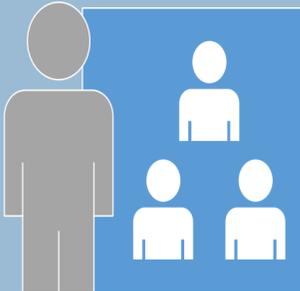

Customer feedback (formal or informal) may serve as a catalyst for change. Feedback on KPI performance, project management processes, schedule visibility or cost overruns may serve as a cause for change to the existing ways of managing project performance.

Champion

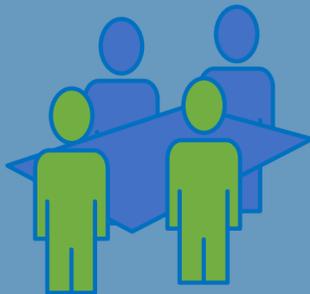

Champions create the vision and engage the PSC to help create a concept of operations. Socialize and obtain agreement in the targeted areas/programs. Help overcome obstacles. Pave the way for PSC to implement the IPPM Solution. Champions are likely in executive leader roles.

Program Support Center (PSC)

Implement, tailor and operate the IPPM System. Includes setup & maintenance of the PWA enterprise tables and fields. Provide consulting and educate the project team. Manage project schedules. Generate data, business intelligence, metrics & analysis. Initiate project update activities with project teams in accordance with the business rhythm.

Project Manager & Project Team

Project Manager manages the project team executing to the established project baseline schedule. Manages and deconflicts resources. Provides updates to schedules. Performs Risk Management practices and provides updates for IPPM. Review & approve timecards. Review & analyze data, business intelligence & metrics reports. Deliver project status to Customer. Project Team provides updates to the project schedules, risk management and works to the established business rhythm.

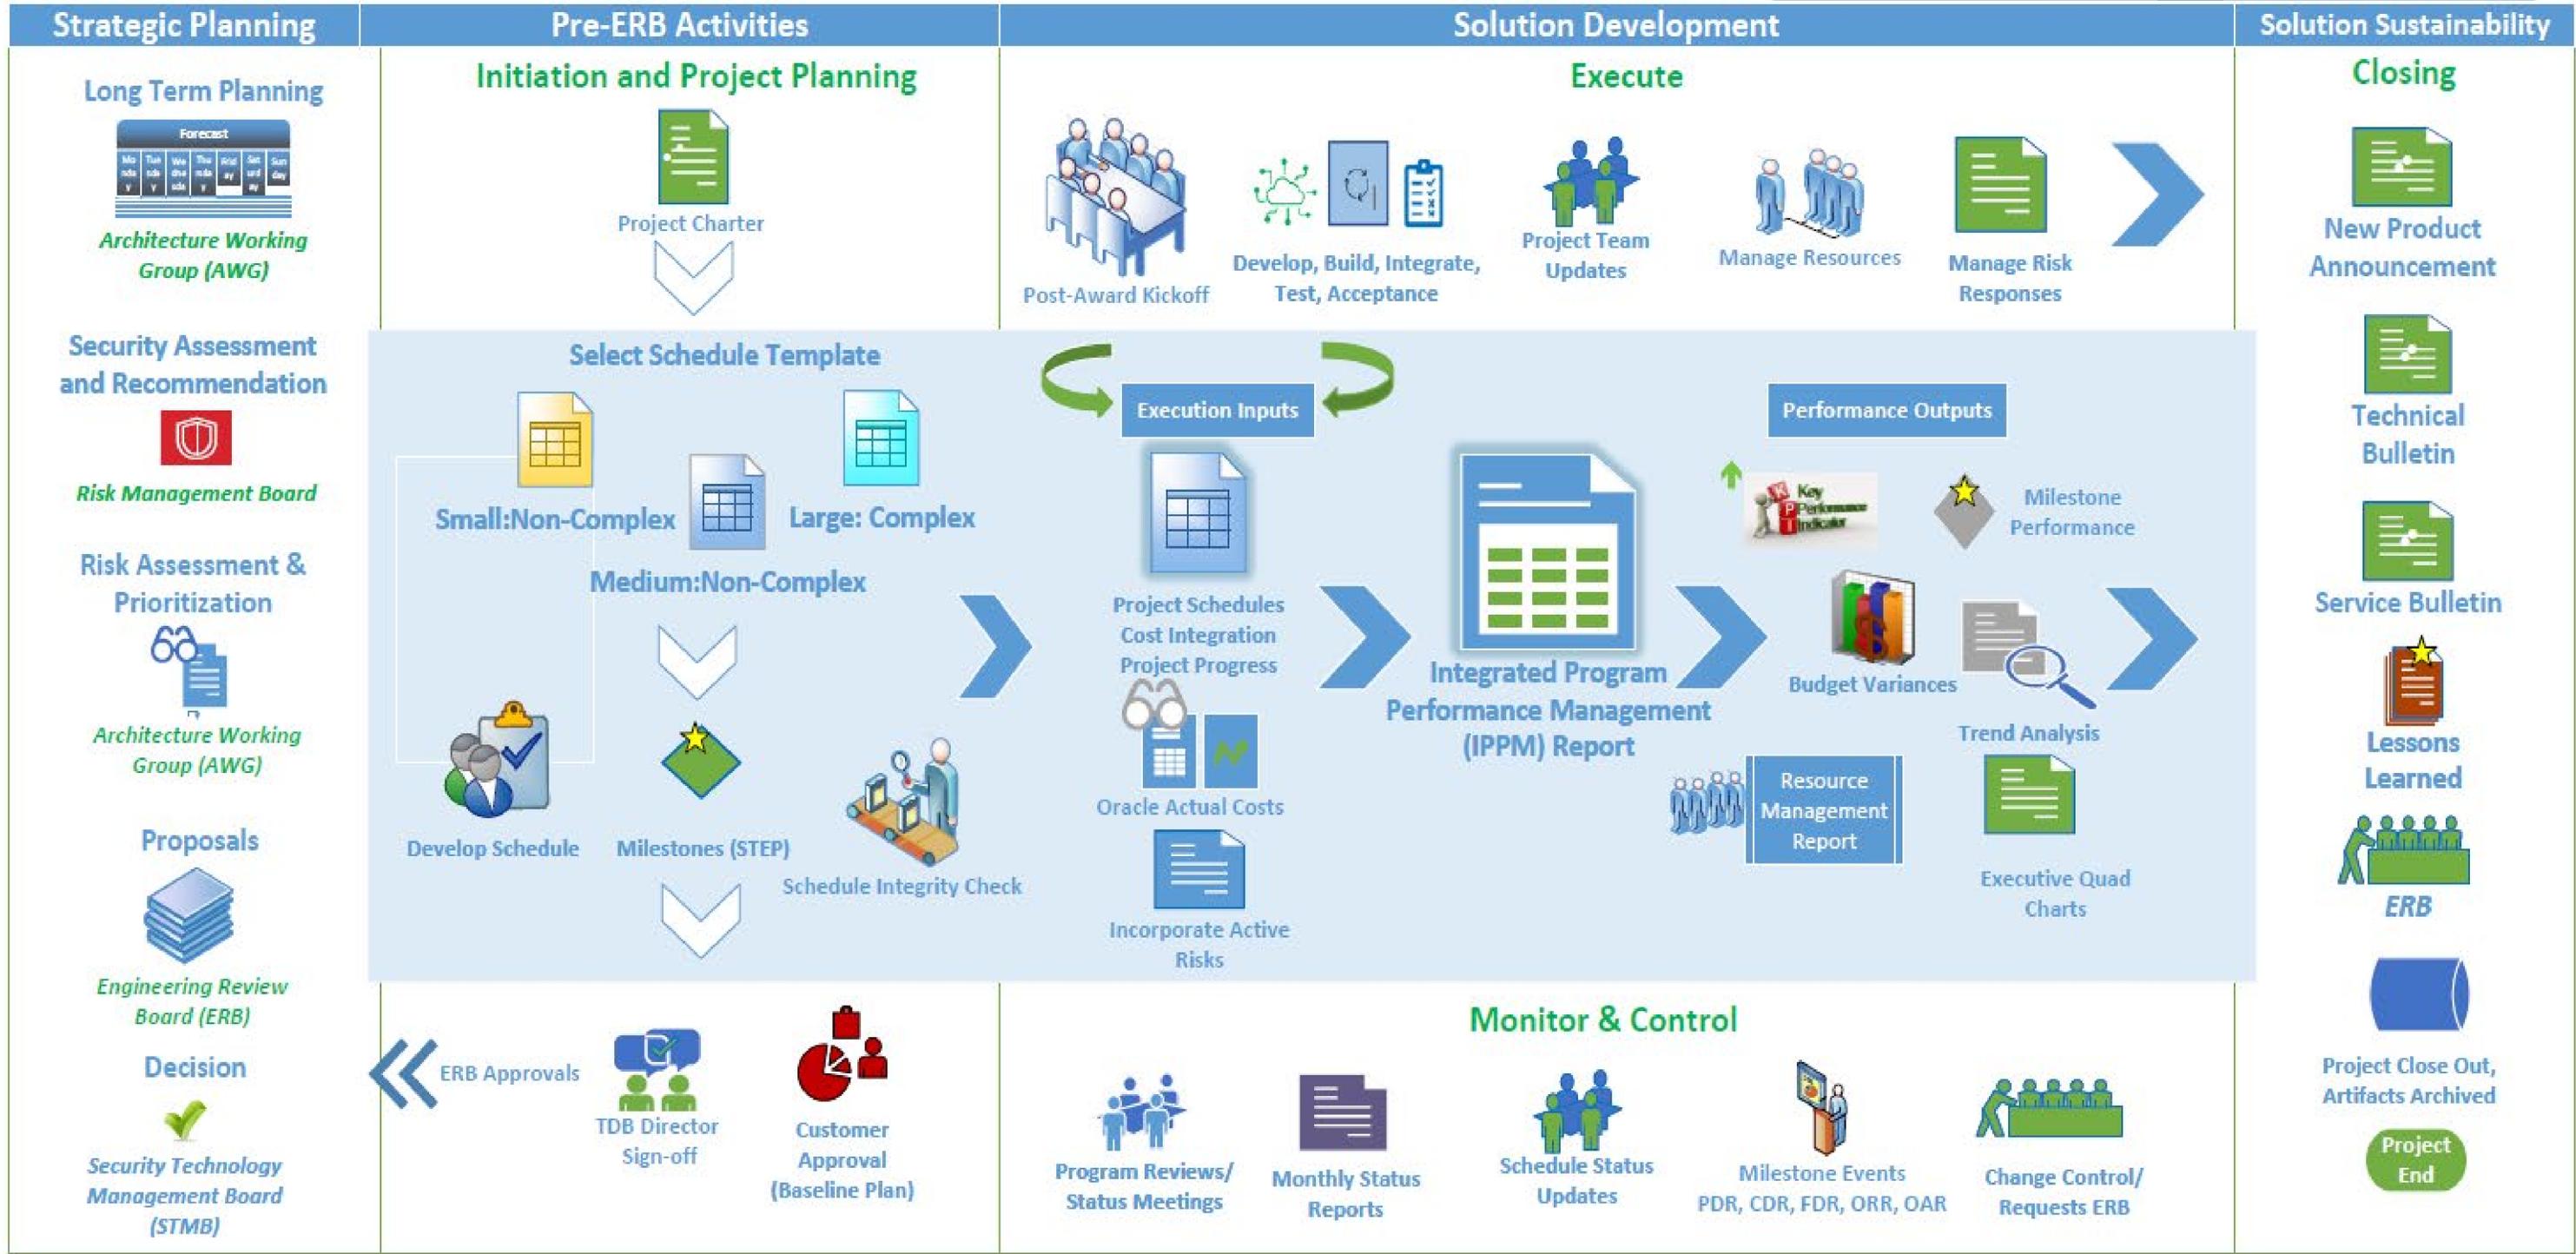

Finance

Oracle Expenditures (actuals) made available to PSC. Project costs (without fee) are included in IPPM data and metrics. Open and closes project charge numbers and task codes. Invoicing is not an input or output of IPPM. IPPM estimates to complete (ETC)s are developed from remaining project work and may be used for 75% funding letters and ETC for projects.

Roles & Responsibilities IPPM and the Project Management Processes

IPPM is central to the Project Management Processes and involved early in the Initiation & Planning. PSC is well integrated with the team during Execution & Closing and leads & guides team through the defined IPPM processes

Milestones and Key Deliverables

	Status	Baseline	Finish		Finish Variance
PDR	Waived				
CDR	Waived				
FDR	●	11/3/2022	12/19/2022	-	30
ORR	●	8/4/2023	9/13/2023	-	27
OAR	●	9/7/2023	10/11/2023	-	23

Performance Tracking for Key Milestones
Source: Schedules

Notes:
PDR and CDR were completed prior to legacy conversion. FDR projected to be late due to {root cause}, corrective actions being take {action 1, action 2,etc}. This delay impacts the subsequent milestones.

Overall Status	Baseline Start	Baseline Finish	Forecast Finish
●	5/16/2022	9/7/2023	10/11/2023

Due to the technical issues and the vendor delays, the project is tracking to a late finish variance of 23 days. Technical issues are under evaluation and SME has been assigned to provide evaluation and recommend corrective actions. Branch Chief has been briefed in the week of 9/9/22.

IPPM on the Air Force BICES program

Background

- Battlefield Information Collection & Exploitation Systems (BICES)
- Cost Plus Fixed Fee
- \$1.5B Total Contract Value
- Over 500 GDIT employees and subcontractors
- Supporting 42 locations globally
- 270+ individual project schedules feeding one IMS
- IPPM maintained by 4 FTEs (Scheduler/Planners)

Benefits of IPPM

- Single-source for all cost/schedule data and analysis
- Faster, more accurate performance reporting
 - Reduced time to generate reporting by over 80%
 - Increased reporting from monthly to bi-weekly
- High customer satisfaction (GDIT and Air Force)
 - Favorable Contractor Performance Assessment Reports (CPARs)
 - Additional sole-source work (2 years \$B)
- Reduced cost to maintain performance reporting

Favorable Contractor Performance Assessment Report (October 2021)

“There were issues with project schedules and timeliness during the first quarter of the PoP. To resolve the concerns, GDIT used corporate schedulers to monitor and create a path forward to get the schedule(s) under control and integrated. This team helped identify what items needed to be in the Integrated Master Schedule (IMS) to provide the required visibility for the Government.

This effort led to more robust project management oversight which helped GDIT meet the requirements in the contract. GDIT started conducting detailed Critical Path Analysis, schedule risk assessments and is meeting DCMA schedule health checks. GDIT also started facilitating weekly project meetings providing visibility into schedule progress and project completion. This ensures the Government is made aware of potential issues much earlier and mitigation can be pursued, which was a problem historically for this contract.

Given what I know today about the contractor’s ability to perform in accordance with this contract or order’s most significant requirements, I would recommend them for similar requirements in the future.” Shannon Jenkins – US BICES Program Manager

PROGRAM SUPPORT CENTER

Services In Support Of Our Programs

REPORTING & ANALYSIS

- ❖ PMRs; process, status reporting, PM team & PRA support, tools
- ❖ EPMRs; process, PM team and Division support, form/format
- ❖ Analysis: Proactive and expanded data analysis, including loss analysis dissemination for all divisions
- ❖ In development: Insight automation forward looking metrics & measures

EVM & SCHEDULING

- ❖ Maintain GDIT's DCMA approved EVM business system
- ❖ Conduct EVMS compliance and surveillance reviews for DCMA
- ❖ New program (startup) implementations
- ❖ Crisis support and recovery services
- ❖ Enterprise-wide schedule and schedule management training
- ❖ Managing the GDIT Scheduling Community of Interest (SCOI)
- ❖ Bid and Implement Industry Leading Tools and Solutions

QUALITY & EHS

- ❖ Quality; Process approach & Risk-based implementation, Quality requirements embedded in PM and Functional Area processes, Customer focus, align best practices & certification requirements, continual improvement focus
- ❖ OSHA / EPA; regulations, compliance, implementation, reporting and risk mitigation
- ❖ ISO 9001 (Quality QMS), 14001 (Environmental EMS) and ISO 45001 (Safety OH&S) Registered Management Systems

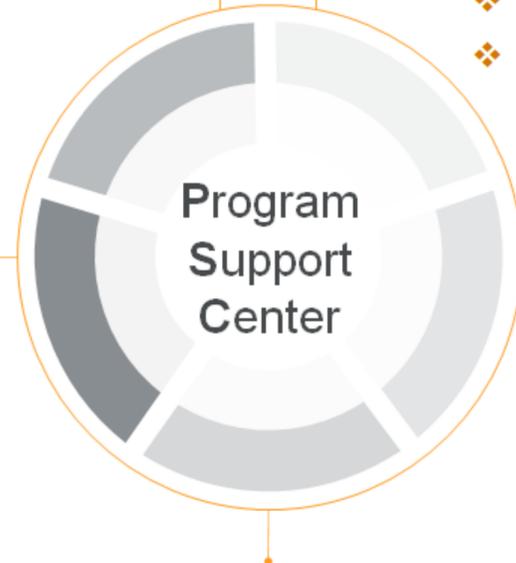

POLICY & PROCESS

- ❖ GDIT policy & process; standards, repository, and facilitation (PPWG)
- ❖ CMMI Certifications
- ❖ Program & Project Management Best practice library (GOAL)
- ❖ 6 Sigma process reviews and improvements (Kaizen events)
- ❖ ITIL Training (in coordination with T&D & ITSM4Gov)

PROGRAM SUPPORT & MATURITY

- ❖ PM Tool Box Portal
- ❖ PM Medleys
- ❖ Supporting PM Development
- ❖ PM Council / Summit
- ❖ Provide PM Point of View for GDIT initiatives
